Spring 2004

Additional information about environmental issues at the Campbell Industrial Park can be obtained by calling the CIP Environmental Hotline - Telephone 674-3388

To Report an Emergency, please call 911

Note: The Emergency Resources Guide is intended to provide supplemental information to emergency response agencies and other groups who have or would like to develop emergency response plans. Nothing in this document is intended to replace or supersede existing or required emergency response plans. The information contained in this Guide was collected on a voluntary basis from a large number of private and public sources. Neither CLEAN nor Dixon Risk Services, Inc. warrants the completeness or accuracy of the information. Any use of the information provided in this Guide by any third party is solely the responsibility of that party.

Hawaiian Electric Company, Inc.

Hawaiian Cement

Oahu Gas Service, Inc.

# Emergency Instructions

## If you witness an Emergency...Do this:

- ◇ Using the nearest phone -- Immediately dial 911.
- ◇ Remain calm -- speak clearly and slowly to the operator.
- ◇ Give your location and explain the nature of the emergency.
- ◇ Follow the instructions of the operator.

### **About 911:**

- Hawaii's enhanced 911 system provides for rapid communication to Fire, Police, and Emergency Medical Services (EMS) personnel.
- The responding operator will determine what emergency services are required and will forward your call to the appropriate Dispatch Center.
- The Dispatch Center operator has expertise and knowledge to assist in your specific situation and may request additional information from you or provide you with instructions on how to protect yourself or others.

**Public Warnings ---** On the Island of Oahu, warnings of emergencies are communicated to the public by means of **Civil Defense Warning Sirens** and the **Emergency Alert System (EAS)**.

- **About Civil Defense Emergency Warning Sirens**

- **If you hear a steady, 3-minute siren tone...Do this:**

- ◇ Tune-in to any Oahu radio or television station.
    - ◇ Listen for emergency information.
    - ◇ Take necessary protective actions as directed during the broadcast.
    - ◇ Stay tuned for further information and instructions.
    - ◇ **Note:** Siren warnings will be repeated as necessary.

- **If you hear a wailing (rising and falling), 3-minute siren tone Do this:**

- ◇ **Seek shelter immediately.** (This warning signifies that an enemy attack has been detected or is imminent.)
    - ◇ Tune-in to any Oahu radio or television station.
    - ◇ Listen for emergency information.
    - ◇ Take necessary, protective actions as directed during the broadcast.
    - ◇ Stay tuned for further information and instructions.
    - ◇ **Note:** Siren warnings will be repeated as necessary.

- **About the Emergency Alert System (EAS) ---** If you are tuned-in to a local radio or television station when a public warning is issued, the EAS will interrupt normal broadcasting and a special Civil Defense announcement will provide vital emergency information.
- Public warnings, issued via the EAS, may contain instructions to evacuate specific areas, following designated routes, or they may advise listeners to “shelter-in-place” by going indoors and closing exterior doors, windows and vents.
- **If you hear an EAS warning message, do this:**
  - ◊ Listen for emergency information.
  - ◊ Take necessary protective actions as directed during the broadcast.
  - ◊ Stay tuned for further information and instructions.
- When an emergency affects the entire State of Hawaii, State Civil Defense will decide whether an EAS message should be broadcast by radio and television stations throughout the State.
- When an emergency affects only Oahu, the Oahu Civil Defense Agency will normally decide whether an EAS message should be broadcast by local radio and television stations. State Civil Defense backs-up Oahu Civil Defense Agency in this process.
- When an emergency affects only Campbell Industrial Park and surrounding communities, the Oahu Civil Defense Agency will normally act on advice from an on-scene emergency response organization (often, the Honolulu Fire Department) to decide whether a special Campbell Industrial Park-oriented message should be broadcast.
- Notes:
  - Because regular radio and televisions stations are used, EAS warnings are heard throughout the normal broadcast area of the station. Unlike most EAS warnings, however, special “Campbell Industrial Park” messages do specifically refer to the Park as the focal point of the emergency.
  - The EAS is not necessarily activated for all emergencies. This is especially true if, in the judgment of emergency responders, an emergency does not have a community-wide impact.

- **About Emergency Alert Sentinel Radios ---** Specially engineered radio receivers, known as “Emergency Alert Sentinels” have been placed throughout the Campbell Industrial Park community to enhance the probability that EAS warnings will be heard at the time they are broadcast. When a local radio station broadcasts an activation signal, the Emergency Alert Sentinels, automatically turn-on so the emergency alert message can be heard.
- State Civil Defense has provided Emergency Alert Sentinels to all public schools in the State.
- C.L.E.A.N has provided more than 300 Emergency Alert Sentinels, free-of-charge, to a wide range of businesses, community service organizations, educational facilities, government facilities, health services providers, public centers, religious facilities, response organizations, and others in the Campbell Industrial Park area.
- **Campbell Industrial Park businesses and other Campbell Industrial Park community organizations of the type noted above, are encouraged to contact C.L.E.A.N if they have not received one of the free Emergency Alert Sentinels.**

# 1. Introduction

---

## 1.1 Background

The Kapolei Area, located in the Ewa Plain, is rapidly becoming the second largest urban area on the Island of Oahu. Home to over 60,000 people, the Kapolei Area is developing into a self-contained community with centers of retail, commercial and industrial enterprises, resorts, churches, schools and planned community housing projects.

The Ewa Plain is also home to the largest industrial park in the State of Hawaii, the James Campbell Industrial Park (CIP or “the Park”). CIP is composed of many diversified businesses, which provide a significant portion of the infrastructure for the Island of Oahu and the State. Businesses in CIP provide vital services to the State of Hawaii and its residents, including a wide range of manufacturing, import/export, power generation, construction, and waste management industries. CIP provides 100% of the Hawaii's oil refining, most of the State's gas manufacturing (propane and synthetic natural gas), 40% of Oahu's electrical generation, and many other vital services needed for the everyday lives of the people of Hawaii. CIP businesses also provide approximately 3,900 jobs. Many of these individuals live in nearby communities.

Many businesses in CIP depend upon neighboring facilities for fuel, raw materials, waste disposal, and shipping. This interdependency reduces transportation costs and the associated environmental risks. The nearby Barbers Point Harbor and Interstate Highway H-1 provide accessibility for commodity flow throughout the Hawaiian Islands and beyond. Underground pipelines provide an additional transportation corridor for refined oil and gas products to Oahu's major port facilities in Honolulu.

As with most industrial and commercial operations, hazardous materials, including flammable and toxic liquids and gases, are present as raw materials, by-products, intermediates and finished products. Many of these materials are used throughout Hawaii in the form of fuels, water treatment chemicals, solvents and other industrial and consumer products. The concentration of hazardous chemicals in CIP and their proximity to a rapidly growing community provide a compelling need for analysis of the potential vulnerabilities and emergency preparedness that specifically addresses the local area needs.

## 1.2 Campbell Local Emergency Action Network

As a result of a proposal by the area's State Assembly Representative, a group of concerned businesses, local government officials, and other individuals have formed an organization, known as the Campbell Local Emergency Action Network (CLEAN), to promote emergency preparedness issues, including public safety and health. CLEAN is a non-profit organization that is funded by donations from private businesses. Its goals include emergency preparedness, public safety and health, community education and public notification. CLEAN is working with representatives from the State Department of Health, the Oahu Civil Defense Agency (OCDA), the Honolulu Police Department, the

Honolulu Fire Department and other government officials to forward their goals of emergency preparedness and public protection. This Emergency Resources Guide (“the Guide”) is a result of their efforts.

CLEAN members are available to provide presentations and written information on emergency preparedness to groups and organizations throughout the Ewa Plain. To learn more about CLEAN or to join the organization, contact CLEAN’s Secretary, c/o AES Barbers Point at P.O. Box 700397, Kapolei, HI 96709-0397, or contact the [CIP Compliance Coordinator](#) at the numbers listed in [Volume II, Section 5, Directory](#).

### 1.3 Emergency Preparedness Goals

Because an emergency is an unplanned event, it is important that businesses have an emergency plan in place to offset and manage some of the emergency’s disastrous effects. Emergency management is a dynamic process that involves preparing for, mitigating, responding to, and recovering from an emergency. Components of emergency management include preparedness, training, conducting practice drills, testing equipment, and coordinating activities with the community. One objective of this Emergency Resources Guide is to assist businesses in the Campbell Industrial Park and the surrounding community to achieve the following emergency preparedness goals:

- ◆ Fulfill their moral obligation to protect employees, the community and the environment.
- ◆ Facilitate compliance with regulatory requirements of federal, state and local agencies.
- ◆ Enhance the community and companies’ ability to recover from the consequential damages of an emergency.

### 1.4 Authority

The City and County of Honolulu has developed a comprehensive emergency plan under the authority of federal, state and local laws and regulations through the OCDA. The City and County of Honolulu Emergency Operations Plan provides a complete description of the organization, resources and procedures available through the City and County government in the event of a disaster. Local businesses are subject to the regulatory requirements for emergency planning under federal and state agencies, including the Environmental Protection Agency (EPA), the Department of Transportation, and the Hawaii Occupational Safety and Health Division (HIOSH). **Nothing in this Guide is intended to replace or reduce the responsibilities or authorities of employers, government, other groups or individuals who may have legal requirements for emergency planning under federal, state or local regulations.** The Guide was developed under authorization of the Campbell Local Emergency Action Network and with the assistance and cooperation of industry and State, City and County emergency response agencies, including the Oahu Civil Defense Agency, the Honolulu Fire Department, Emergency Medical Services, the Honolulu Police Department, and the State Department of Health. It provides supplemental information that will assist agencies and

businesses in further development of their specific emergency operations plans for the Campbell Industrial Park and the surrounding areas.

## **1.5 Purpose**

The Campbell Industrial Park provides a favorable location for business and industry. The large concentration of businesses in and around the Park provides unique opportunities and challenges in emergency preparedness and response. The Guide provides supplemental guidance and information to emergency response personnel, local residents, and businesses based on the specific conditions in and around CIP. The Guide's intent is to improve the effectiveness of existing response resources and to improve community alert and emergency notification by providing information about the Park, its residents and specific hazards associated with CIP.

## **1.6 Situation and Assumptions**

Emergencies stemming from man-made hazards and natural causes may occur at any time and at any location in and around CIP. The Campbell Industrial Park contains a large variety of businesses and facilities. Over 200 separate occupants, many of whom use hazardous materials, have been identified and contacted in the process of preparing this Guide. [Volume II, Section 3, Map 3-1, Business Locator Map](#), provides a map key that shows the locations of the businesses that occupy CIP. [Volume II, Section 4, Business Profiles](#), provides a brief business profile for each business. Some major businesses within CIP include:

- |  |                                      |
|--|--------------------------------------|
| ◆ Refineries                             | ◆ Machinery Distributors             |
| ◆ Plastics Manufacturers                 | ◆ Construction Services              |
| ◆ Industrial and Medical Gases Providers | ◆ Concrete Products Manufacturers    |
| ◆ Storage and Warehouses                 | ◆ Dry Goods Distributors             |
| ◆ Power Generation                       | ◆ Agricultural Sales and Services    |
| ◆ Waste Handling                         | ◆ Hazardous Materials Transportation |
| ◆ Wood Products Sellers                  | ◆ Food Products Distributors         |

Large releases of toxic chemicals, whether in CIP, on the highway, or at other locations on Oahu, have the potential to travel several miles downwind. Regulations developed by HIOSH and the EPA, and local codes and standards provide several layers of protection from accidental chemical releases. Companies who handle the most hazardous chemicals must develop maintenance, inspection, engineering and safety programs to ensure that releases do not occur. Government agencies inspect facilities to ensure that safety programs are in place and effective. CLEAN works with government agencies to improve emergency planning by sponsoring training activities, providing information on known chemical hazards in the Park and by distribution of this Emergency Resource Guide.

Several of the businesses in CIP handle certain toxic substances regulated under EPA's Risk Management Program. Additional information about these facilities and their

release prevention programs is available in the Federal Reading Room at U.S. EPA Pacific Islands Contact Office, PJKK Federal Building, 300 Ala Moana Boulevard, Honolulu, Hawaii. Appointments are made by telephone at 541-2710.

The Guide assumes that the severity of natural emergencies will be based upon publicly available information about the Barbers Point area. Natural disasters including hurricanes, tsunamis, seismic activity, and floods, are assumed to have the potential for widespread flooding, wind damage, and/or the disruption of power, utilities, communications and other critical services.

### 1.7 Instructions on Guide Use

#### 1.7.1 Guide Overview

The Guide has been prepared to provide businesses and individuals with basic guidance for emergency preparedness and response. It provides a general guidance for the types of hazards that could result in an emergency emanating from CIP or the types of natural emergencies that could affect CIP and the surrounding area. An overview of the emergency response organizations in place to provide protection for the occupants of CIP and the surrounding community is also included.

The Guide also provides some basic precautions and steps that individuals and businesses can do to prevent, prepare for, and deal with an emergency. *It is important to note that all potential scenarios have not been identified, but methods recommended by the EPA and other government agencies were used to arrive at the information needed for emergency response planning.* The checklists provided apply to other scenarios that could occur in the event of a hazardous materials release from CIP, releases during transit to or from industrial areas, and anywhere natural disasters may strike.

#### 1.7.2 Guide Distribution

The Guide is intended to provide information to the public, to the occupants of CIP, and to response agencies that will enhance the effectiveness of existing plans and procedures. Distribution of the Guide includes the following groups:

- |                                  |                                    |
|----------------------------------|------------------------------------|
| ◆ Honolulu Fire Department       | ◆ Department of Health             |
| ◆ Police Department              | ◆ Businesses in CIP                |
| ◆ Mayor's Office                 | ◆ Local Government Representatives |
| ◆ Area Schools                   | ◆ Area Churches                    |
| ◆ Neighborhood Board Chairperson | ◆ Appropriate Medical Facilities   |
| ◆ Area Association Presidents    | ◆ Emergency Medical Service        |
| ◆ Oahu Civil Defense             | ◆ State Civil Defense              |

### **1.7.3 Expectations**

Businesses and agencies have legal responsibilities for prevention, emergency planning and emergency response to protect the public, the environment and their employees. This Guide is based on the expectation that the information provided would be used by CIP businesses, agencies, and the public to advance their emergency planning goals. Refer to [Section 1.3, Emergency Preparedness Goals](#). The public also has an important responsibility for emergency preparedness. Prompt and accurate reporting of emergencies, orderly evacuation (when ordered), and cooperation with local officials in educational programs are critical to the overall effectiveness of community emergency preparedness. It is anticipated that industry, government agencies, and the public will find the information contained in the Guide helpful in their individual preparations for emergencies and provide a better understanding of the potential hazards associated with the industries contained in CIP.

Your comments and suggestions to improving the Guide are welcome. Please submit your comments to the President of C.L.E.A.N., c/o AES Barbers Point at P.O. Box 700397, Kapolei, HI 96709-0397

## 2. Emergency Planning

---

### 2.1 Introduction

Emergency planning begins with an awareness of the types of incidents that have happened in the past and the types of incidents that could happen. Most individuals have experienced some emergency situation. Typically, the situation is mitigated or diminishes naturally without any major loss to the community. This experience may result in a casual attitude about the potential for major disasters to occur. Disasters do not happen often, but they do occur. Individuals, institutions, schools, businesses and emergency response groups should plan emergency response activities before disaster strikes. What would you and your family do when faced with a potential disaster? The actions you take as an individual may be more important than anything trained professionals can do to help you. Without individual preparation, community planning and emergency resources have only a limited benefit.

### 2.2 The Need for Planning

The Campbell Industrial Park is an area of approximately 1,400 acres that contains approximately 200 businesses. Other occupied land including residential, light industrial, commercial and military property surrounds the Park. The primary hazards to the area that are addressed in this Emergency Resources Guide include the following:

- ◆ Hazardous Materials Releases
- ◆ Hurricanes and Tropical Cyclones
- ◆ Tsunamis
- ◆ Leaks
- ◆ Fires
- ◆ Earthquakes
- ◆ Flooding

Within a few miles of the Park are many new homes, businesses, schools and other inhabited areas that could be affected by an emergency in the Campbell Industrial Park or on nearby streets and highways. The estimated population of the area within 10 miles of CIP is over 150,000 people.

### 2.3 Guide Overview

This Guide is primarily focused on acute hazards that could directly affect or are related to activities in CIP. The areas surrounding the Park, such as the H-1 Highway are also potential sources of hazardous material releases or other emergencies and have not been specifically addressed in this Guide. Other hazards, such as crime, wildland fires, or mass transportation accidents may also exist, but are beyond the scope of this Guide.

This Guide is not intended to replace any existing plans nor fulfill any public or private organization's duties or obligations to conduct their own emergency planning. As a minimum, businesses in the park should refer to applicable state, federal and local regulations regarding the need for facility-specific plans.

### 2.4 Getting Started

All businesses in CIP are encouraged to obtain a copy of the “Emergency Management Guide for Business and Industry” from the [Federal Emergency Management Agency \(FEMA\)](#) or the [OCDA](#). This document provides a step-by-step approach to emergency planning, response and recovery for companies of all sizes.

#### What actions can you take?

- ☐ Appoint a Facility Emergency Coordinator.
- ☐ Identify the types of emergencies described in this Guide.
- ☐ Learn about hazards at neighboring facilities.
- ☐ Know how to report an emergency.
- ☐ Follow the emergency guides included in this Guide for preparation and response.
- ☐ Follow the guidance of emergency management personnel. Do not delay.
- ☐ Educate your employees/family members on the proper emergency procedures.
- ☐ Conduct drills to become proficient and ensure your plan will work.
- ☐ Post emergency phone numbers at all telephones in your home and business.
- ☐ Plan to alert your neighbors of any emergency if you can safely do so.
- ☐ Plan ahead what you will do with pets and personal belongings.
- ☐ Identify your property - photograph or videotape it - and keep the records in a safe place. If you lose property in an emergency, proper documentation will speed the claims process.
- ☐ Obtain emergency supplies and keep them in good condition and in an accessible place.
- ☐ Plan an escape route and an alternate.
- ☐ Assemble the food and supplies to sustain you through an emergency.
- ☐ In case of an emergency, act promptly. "Over-response" is preferred to "under-response."

### 2.5 Communications

#### 2.5.1 Notification and Warning - 911

[Procedures for notifying 911](#) are provided at the front of this Guide. Businesses and individuals should always think of 911 as the first and most critical means of initiating emergency response to an incident. The City and County of Honolulu’s Emergency Response Plan depends upon rapid notification by industry and by individuals that an emergency has occurred. If in doubt about a situation you believe could be an emergency, call 911.

When 911 is called, an operator is reached who will determine what emergency services you need and forward your call to the appropriate Fire Dispatch Center, Police Dispatch Center or Emergency Medical Services (EMS) Dispatch Center. It is important to listen carefully to the 911 operator and to provide the information requested.

When you are transferred to Fire, Police or EMS dispatch you will be talking to an operator with specific expertise and knowledge. The dispatch center may request more specific information from you or provide you with instructions on how to protect yourself or others.

### 2.5.2 Public Information

During a widespread emergency, there are a number of sources of information available to the public. Local television and radio stations provide regular updates. The National Oceanic and Atmospheric Administration (NOAA) broadcasts current weather information on weather alert monitors that are relatively inexpensive and readily available to the public. The [OCDA](#) and other public agencies may be contacted for further information at the numbers provided in [Volume II, Section 5, Directory](#).

For localized emergencies, such as small chemical leaks, fires and other public health concerns, the OCDA sirens and the Emergency Alert System (EAS) may not be activated, and information about the incident may not be immediately available. Smoke from any fire can contain harmful amounts of carbon monoxide and other chemicals. Prolonged or intense exposure to these chemicals can result in adverse health effects.

If you believe that you have experienced a harmful exposure to toxic chemicals or smoke, medical attention should be sought immediately. Knowledge of the types and amounts of chemicals involved, the duration of exposure, and any symptoms experienced are helpful in determining if significant health effects may result. It is important to note that minor incidents are harder to detect and it is more difficult to pinpoint the source than for larger events. The answers you are seeking may not be available in the first few hours following an incident. See [Hazardous Materials Emergencies, Section 4](#), for additional information.

#### 2.5.2.1 CIP Environmental Hotline

Additional information about environmental issues at the Campbell Industrial Park can be obtained by calling the CIP Environmental Hotline at 674-3388. The hotline is available 24 hours per day, 7 days per week. **Please note this service is not intended for emergencies. To report an emergency, please dial 911.**

### 2.5.3 Communicating with Response Agencies

This section of the Guide is intended for use by businesses in CIP who could experience an incident that requires notification and response of a public response agency. The primary responsibility of a public response agency is the protection of public welfare, the safety of their personnel, and the protection of property and the environment. When the

## Section 2: Emergency Planning

---

public response agencies are summoned to the scene of an emergency, they need complete and accurate information in order to perform their work efficiently. The following checklist indicates the type of information that they will be seeking when they arrive at your location. Your first priority is to ensure that all employees and visitors are out of danger. Do not put yourself at risk in an attempt to get more information about the event. Your first priority should be the safety of yourself and others.

### Initial response checklist:

- |  |   |
|--|---|
| <input type="checkbox"/> Who is in charge of the scene?                                | <i>Plant Manager, Facility Emergency Coordinator, fire brigade leader, or other representative</i>          |
| <input type="checkbox"/> Are individuals sick or injured?                              | <i>Number, location, condition</i>  |
| <input type="checkbox"/> What details are available?                                   | <i>What happened, when, how, where, why?</i>  |
| <input type="checkbox"/> Is everyone accounted for?                                    | <i>Evacuated employees, contractors, and response team members</i>  |
| <input type="checkbox"/> What hazards are present?                                     | <i>Hazardous materials spills, energized equipment, other hazards</i>                                       |
| <input type="checkbox"/> What information is available about the location or incident? | <i>Plot plan, Material Safety Data Sheets, process information, chemical compatibility data, maps, etc.</i> |
| <input type="checkbox"/> What response activities are currently underway?              | <i>Company's response, assessment, investigation, search and rescue, shutdown, etc.</i>                     |

All businesses in CIP should be prepared in advance to answer these basic questions should an emergency occur. Working with the Fire Department to prepare information in advance (pre-planning) is recommended for all businesses. Many businesses in CIP are closed after normal working hours. For businesses that are not open 24 hours a day, it may be helpful to arrange in advance with the Fire Department to have emergency planning information at an accessible location.

### 2.5.4 Public Education

Information is available from numerous public and private agencies on emergency preparedness and response. Speakers from the OCDA, the Fire Department and the CLEAN organization are available to address clubs, civic organizations, schools and other groups interested in learning more about emergency preparedness. The State Department of Health has appointed a Compliance Coordinator for Campbell Industrial Park. The Coordinator maintains the [CIP Environmental Hotline](#), a telephone message service, which provides and receives information about CIP environmental issues. The CIP Environmental Hotline can be used by anyone to file complaints and concerns, request data, and to hear the latest information available regarding workshops, seminars, public hearings, and other matters pertinent to CIP. Following any incident in the Park, the CIP Environmental Hotline can be used to receive a recorded message about the

status of the event and any recommendations offered by the State Department of Health. **The CIP Environmental Hotline is not an emergency number. Always use 911 to report an emergency.**

## **2.6 Evacuation**

Evacuation of the Campbell Industrial Park and the surrounding area may be necessary in the event of a natural emergency, severe fire, or hazardous material release. At the onset of an emergency, all individuals must assess the degree of hazard and determine if evacuation is needed and appropriate for the situation. In some situations, *evacuation may increase the risk of being injured*. The decision to evacuate is highly dependent upon the immediate situation.

For major emergencies, the OCDA may provide evacuation instructions. For some natural emergencies, such as a tsunami caused by an earthquake, evacuation should be immediate for those individuals in the potentially affected areas. The emergency response guidelines provided in this Guide provide some general considerations for making the decision to evacuate.

[Maps 2-1 and 2-2 detail evacuation routes](#) out of CIP. Businesses in and around CIP should review the map with their employees as part of their emergency preparedness programs. The map can be copied and posted at a convenient location within each business. Note that there is a single street leading from the Harbor and CIP. It is important that this street be kept open for emergency evacuation. It may be better to stay where you are or to move upwind of a hazardous materials release than to risk driving through a toxic or flammable cloud. If the road is blocked by an incident, and you must evacuate your location, move to an area of safety within CIP.

Hurricanes, tsunamis and fires are the most likely scenarios to potentially cause widespread damage and injury to CIP and its surrounding area. For most incidents, there will be enough warning of impending danger to allow businesses to follow their evacuation procedures. Evacuation routes from CIP include: the Park entrance on Kalaeloa Boulevard; and, with some restrictions, the gate on Malakole Street leading to Kalaeloa. **Evacuation to Kalaeloa is an option only after Fire, Police, or Civil Defense responders have unlocked the Malakole Street gate.** (Honolulu Fire Department Station 40 has a key for the gate.) The City and County Emergency Operations Plan includes provisions for shelters and care of CIP evacuees. [Table 2-1, in Section 2.6.2, lists the shelters for CIP and surrounding areas.](#) Oahu Civil Defense activates shelters on an as-needed basis.

Businesses in CIP should organize employees, contractors and visitors to ensure that safe meeting locations are designated and headcount procedures are in place. Evacuation plans developed by businesses should include evacuation from the immediate location and evacuation from CIP. They also need to account for the fact that some workers arrive at CIP by bus transportation from other locations.

## Section 2: Emergency Planning

---

The OCDA will coordinate bus transportation from city resources if needed during an evacuation. If additional buses are required, military resources may be requested through State Civil Defense.

Some businesses in CIP have processes that must be continuously manned. Power plants and refineries may need a specific plan to continue operations after evacuation of the general population. Specific procedures need to be in place for the protection of those who stay behind to operate critical equipment. It is also advisable to notify the Fire Department in advance if the business emergency plans call for personnel to stay behind during an evacuation.

In event of a major emergency or a security related event, Honolulu Police Department or other law enforcement authority may block roads and limit access to the Park. Businesses are encouraged to make prior arrangements with the [Honolulu Police Department](#) for the identification of employees who may need to enter Campbell Industrial Park past roadblocks or checkpoints during an emergency.

### 2.6.1 Evacuation of Elderly or Disabled Individuals

The Department of Human Resources and the Oahu Civil Defense Agency have a program for identifying and assisting disabled and elderly who need help in leaving their homes during an evacuation or disaster. The program will also alert the hearing-impaired or those using home life support units who need advance notice of an impending disaster.

For more information on this program, contact the [Civil Defense Coordinator at the City Department of Community Services at the address listed in Volume II, Section 5, Directory](#).

### 2.6.2 Community Shelters and Care Facilities

Community shelters available for Makakilo, Kapolei, Makaha and other areas surrounding CIP are listed below:

**Table 2-1: Emergency Shelters for CIP and Surrounding Area**

Shelter	Hurricane	Tsunami	Earthquake	High Surf	Flood	Other
August Aherns Elementary	X					
Campbell High	X	x	x	x	x	
Ewa Beach Elementary				x	x	
Ewa Community Park			x	x	x	x
Ewa Elementary	X				x	
Holomua Elementary			x	x	x	x

## Section 2: Emergency Planning

<b>Shelter</b>	<b>Hurricane</b>	<b>Tsunami</b>	<b>Earthquake</b>	<b>High Surf</b>	<b>Flood</b>	<b>Other</b>
Honowai Elementary	<b>x</b>				<b>x</b>	
Ilima Intermediate	<b>x</b>	<b>x</b>	<b>x</b>	<b>x</b>	<b>x</b>	
Kaimiloa Elementary	<b>x</b>		<b>x</b>	<b>x</b>	<b>x</b>	<b>x</b>
Kaleiopuu Elementary	<b>x</b>					
Kamaile Elementary	<b>x</b>					
Kamokila Community Park			<b>x</b>	<b>x</b>	<b>x</b>	<b>x</b>
Kapolei Elementary	<b>x</b>				<b>x</b>	
Kapolei Middle School			<b>x</b>	<b>x</b>	<b>x</b>	<b>x</b>
Kapolei High	<b>x</b>		<b>x</b>	<b>x</b>	<b>x</b>	<b>x</b>
Lehua Elementary	<b>x</b>		<b>x</b>		<b>x</b>	
Leihoku Elementary	<b>x</b>					
Mali Elementary	<b>x</b>	<b>x</b>		<b>x</b>	<b>x</b>	
Makaha Elementary	<b>x</b>					
Makakilo Community Park			<b>x</b>	<b>x</b>	<b>x</b>	<b>x</b>

## Section 2: Emergency Planning

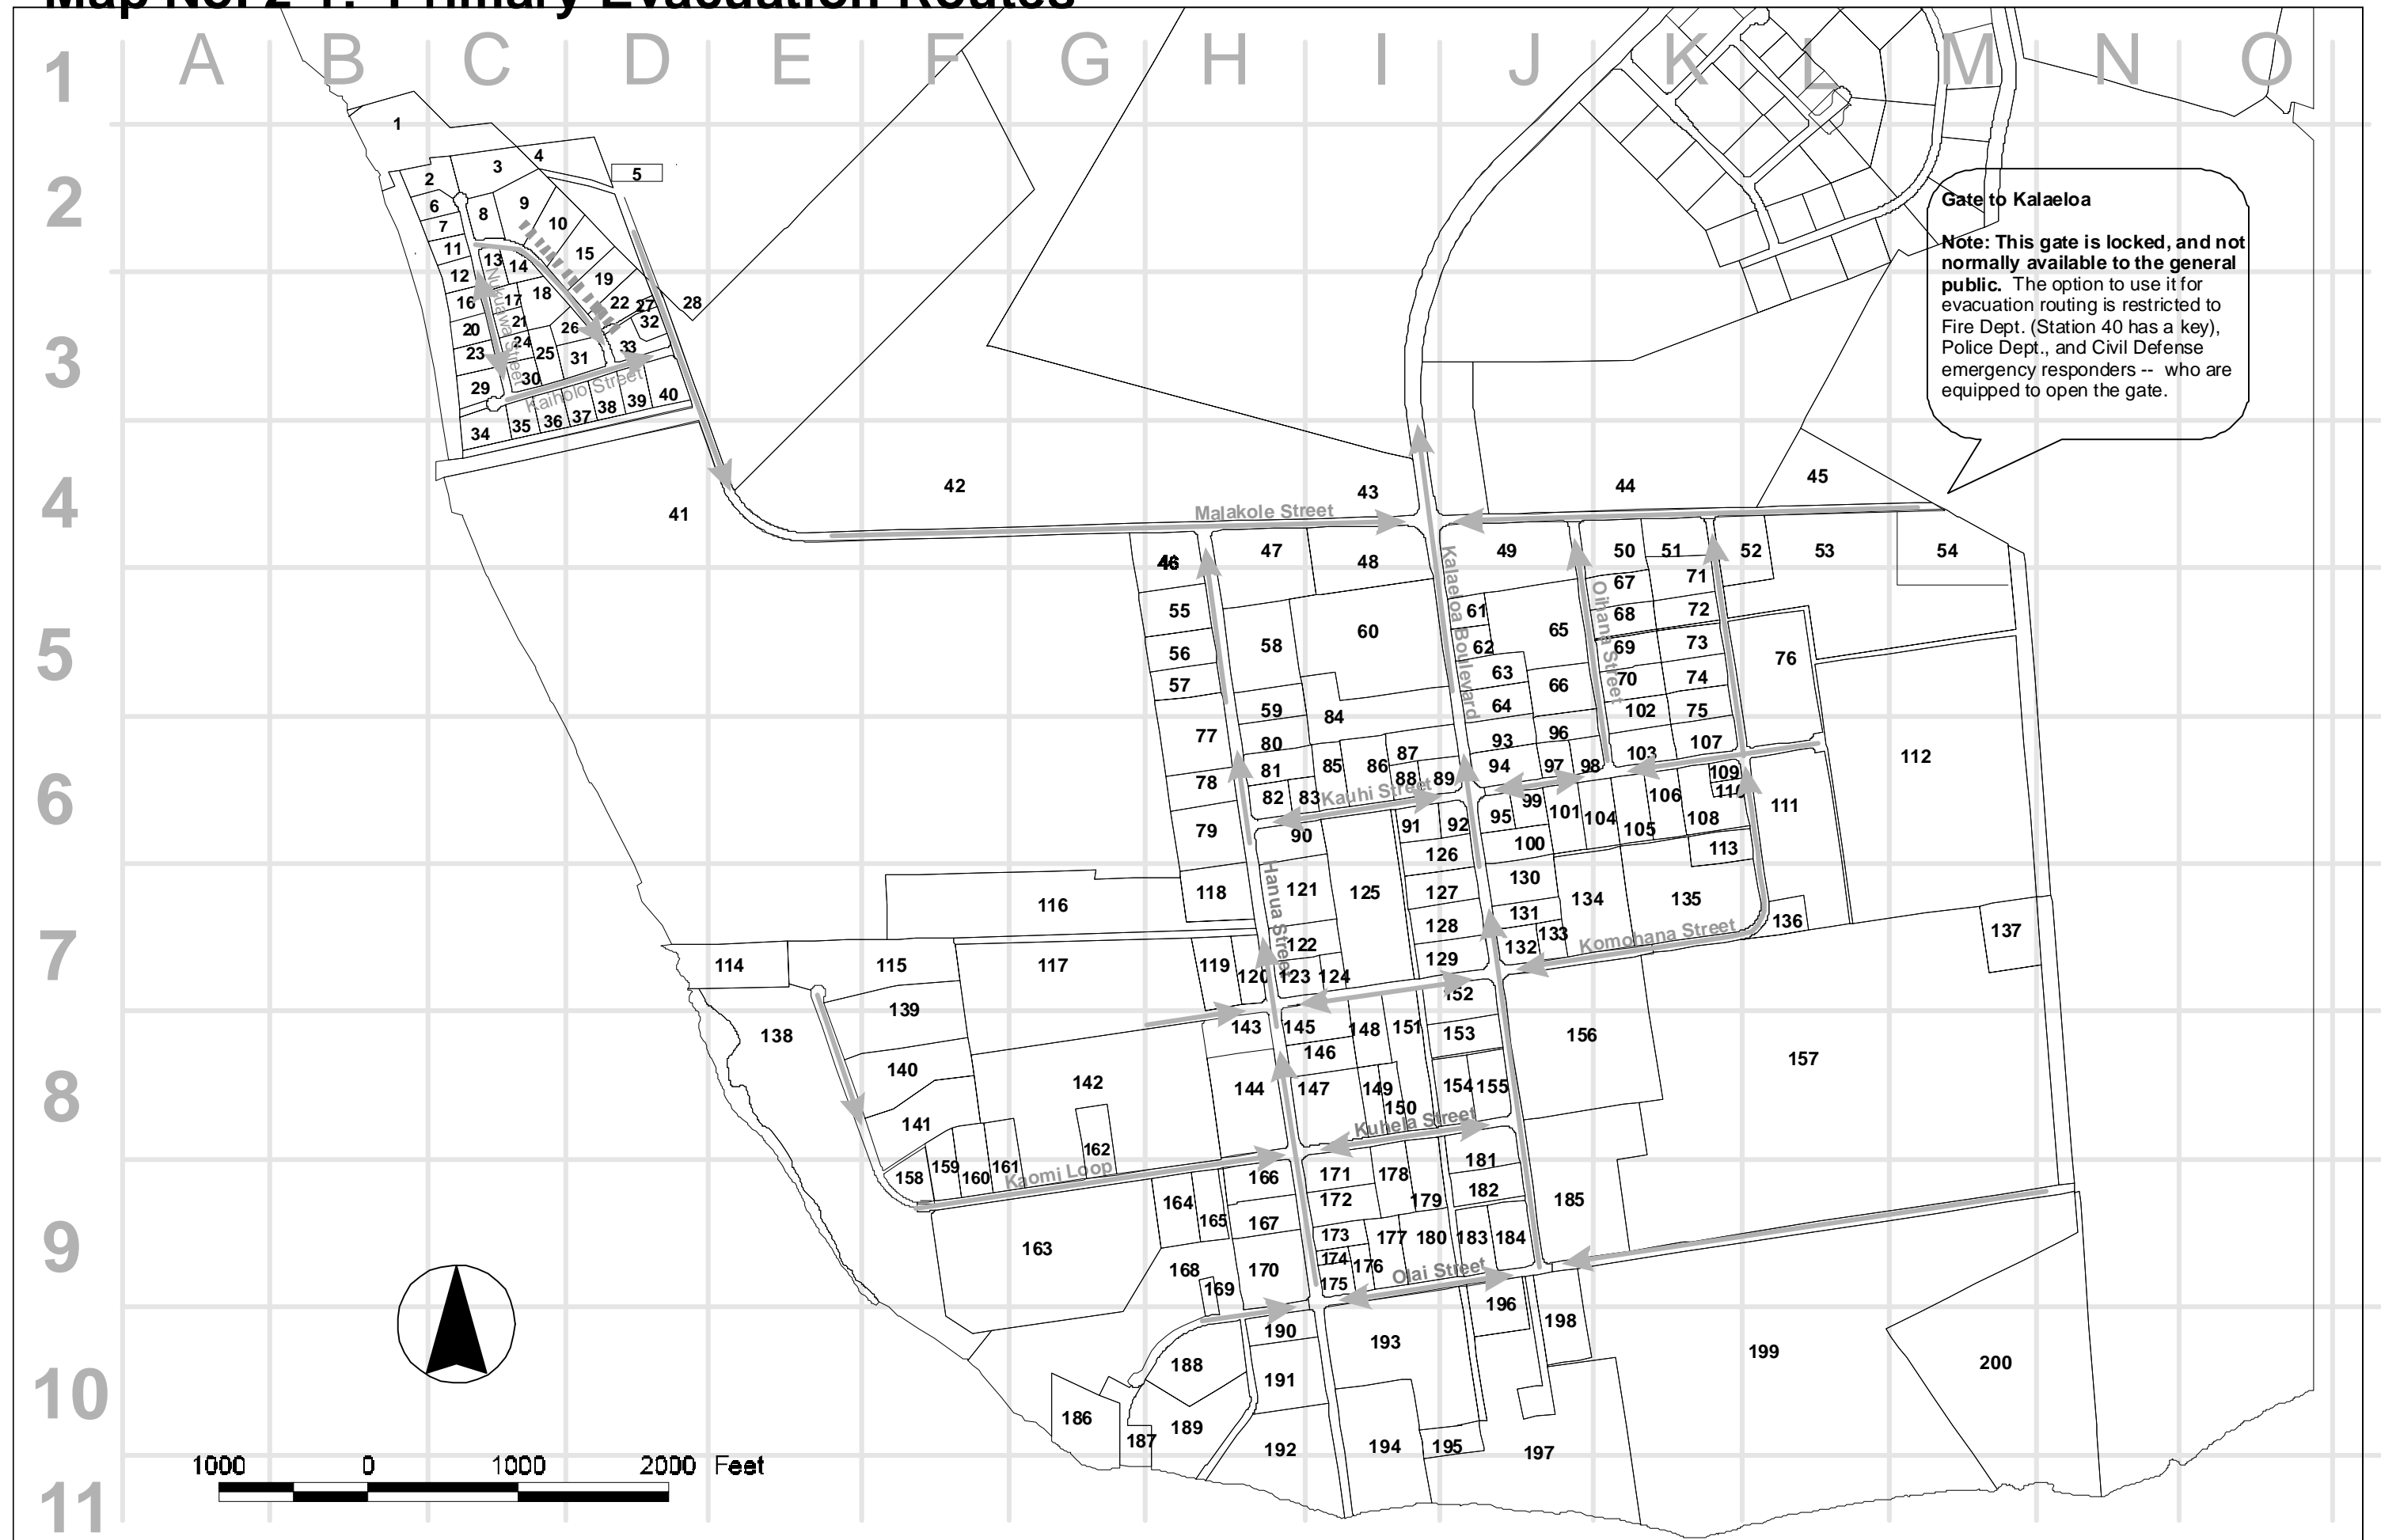

---

**Table 2-1: Emergency Shelters for CIP and Surrounding Area (continued)**

<b>Shelter</b>	<b>Hurricane</b>	<b>Tsunami</b>	<b>Earthquake</b>	<b>High Surf</b>	<b>Flood</b>	<b>Other</b>
Makakilo Elementary	<b>x</b>	<b>x</b>	<b>x</b>	<b>x</b>	<b>x</b>	
Mauka Lani Elementary	<b>x</b>		<b>x</b>		<b>x</b>	
Nanaikapono Elementary						<b>x</b>
Nanakuli Beach Park						<b>x</b>
Nanakuli Elementary	<b>x</b>					
Nanakuli High & Intermediate	<b>x</b>	<b>x</b>	<b>x</b>	<b>x</b>	<b>x</b>	
Pohakea Elementary	<b>x</b>		<b>x</b>	<b>x</b>	<b>x</b>	<b>x</b>
Waianae Elementary	<b>x</b>					
Waianae Intermediate	<b>x</b>					
Waianae High				<b>x</b>	<b>x</b>	<b>x</b>
Waipahu Elementary	<b>x</b>				<b>x</b>	
Waipahu High	<b>x</b>		<b>x</b>		<b>x</b>	
Waipahu Intermediate	<b>x</b>				<b>x</b>	
Waipahu Park District					<b>x</b>	

As noted above, not all shelters are available for every type of emergency. Most locations will be opened selectively, depending upon the areas affected and the hazard area. Other alternatives to community shelters include the homes of relatives whose residences are not endangered, and facilities provided by your employer or church group. *Listen to radio and television announcements for specific shelter designations and opening schedules*

# Map No. 2-1: Primary Evacuation Routes

**This page intentionally left blank**

## **2.7 Training for Emergency Response Personnel**

All businesses in and around CIP should see that their employees are provided with the basic training necessary to recognize and effectively respond to emergencies. The type and extent of training requirements vary widely based on the nature of the business, the size of the business and other factors. [Table 2-2 is a partial list of training requirements of the Hawaii Department of Labor and Industrial Relations](#) for various emergency response personnel. Some of the training requirements also apply to employees of agencies who would be involved in emergency response operations involving hazardous materials. All businesses in the Campbell Industrial Park are encouraged to consult the federal, state and local regulations to determine the appropriate training requirements for their employees.

New regulations pertaining to training of facility security personnel are now in effect for certain facilities that handle hazardous materials, are involved in transportation of hazardous chemicals and certain facilities in proximity to ports. Businesses are encouraged to consult with the United States Department of Homeland Security and the United States Transportation Security Administration to determine which regulations apply to their facilities.

## Section 2: Emergency Planning

**Table 2-2: Types of Training**

Training Type	Audience	Contents (summary)
General	All Employees	Recognition of hazards and how to avoid them. Familiarization with the emergency plan and escape procedures.
	Designated employees	To assist in safe and orderly evacuations.
Fire Training	All employees expected to use fire extinguishers or equipment	Instructions on the use of fire extinguishers or other equipment and the hazards of incipient stage fire fighting.
	Fire Brigade Members	Training at least annually commensurate with expected duties and functions.
	Interior Structural Fire Fighters and Rescue	Training at least quarterly commensurate with expected duties and functions.
	Fire Brigade Leaders and Instructors	More formalized training at outside classes, such as university fire extension services.
<b>Hazardous Materials</b>		
First Responder Awareness Level	Employees who are likely to witness or discover a hazardous materials release	Understanding of hazardous substances and their risk, recognition of the presence of a hazardous substance, identification of the released substance, recognition of their role, and recognition of the need for additional resources and notification procedures.
First Responder Operations Level	Individuals who respond to releases or potential releases and take defensive action to contain it.	At least 8 hours training or have competency as a First Responder Awareness Level and knowledge of basic hazards and risk assessment techniques, selection and use of personal protective equipment, understanding of basic hazardous materials terms, implementation of decontamination procedures, and understanding of the relevant operating and termination procedures.
Hazardous Materials Technician	Individuals who respond to releases or potential releases for the purpose of stopping the release.	At least 24 hours of training equal to the first responder operations level and competency in implementing the employer's emergency response plan, identification, classification and verification of known and unknown materials, ability to function as assigned in an Incident Command System, selection and use of specialized personal protective equipment, understanding of hazard and risk assessment techniques, capability of performing advanced control and containment operations, ability to implement decontamination procedures, understanding of termination procedures and basic chemical and toxicological terminology and behavior.
Hazardous Materials Specialist	Individuals who respond to help Hazardous Materials Technicians with more direct or specific knowledge of hazardous materials.	At least 24 hours training equal to the technician level and ability to implement the local response plan, classification and verification of known and unknown materials using advanced instrumentation, knowledge of state emergency response plan, selection and use of specialized personal protective equipment, understanding of in-depth hazard and risk techniques, ability to perform specialized control and containment, ability to determine and implement decontamination procedures, understanding of chemical, radiological and toxicological terminology and behavior.
On-Scene Incident Commander	Those who assume control of the incident scene beyond first response	At least 24 hours training equal to the first responder operations level and competency in use of the Incident Command System, hazards and risks of working in personal protective equipment, knowledge of the local and state emergency response plans and the Federal Regional Response Team, and knowledge of the importance of decontamination procedures.

### 3. Emergency Organization

---

Emergency response to incidents in the Campbell Industrial Park is organized and managed under national, state and local systems of emergency management. The systems are based upon plans and procedures formulated over many years of experience. The basic structure of the emergency management system is referred to as an Incident Command System. The system provides a common framework for effectively utilizing the resources of the many public and private organizations and resources available.

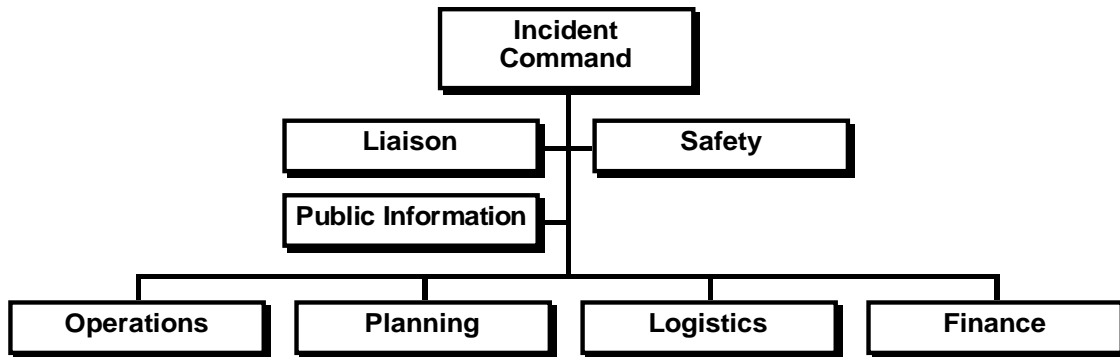

#### 3.1 Incident Command System

An Incident Command System (ICS) is the combination of facilities, equipment, personnel, procedures, and communications operating within a common organizational structure responsible for the management of assigned resources to effectively accomplish stated objectives pertaining to an incident. Although the system is sometimes modified to meet local needs, the basic structure, as shown in [Figure 3-1](#), can be used to review and critique the primary needs of organizations involved in emergency response. This report is organized to reflect the status of the major elements of an ICS as referenced in Federal and State hazardous materials regulations and the City and County Emergency Operations Plan. The City and County Plan states that the City has adopted the Incident Command System for response to all emergencies and disasters. This section of the Guidebook also provides an analysis of the current level of emergency preparedness available to CIP in the event of an emergency, either caused by a hazardous materials release or a natural disaster.

Businesses are not required by federal and state regulations to develop an ICS unless their personnel are involved with certain kinds of emergency response activities involving hazardous materials. All businesses in CIP are partially or fully reliant upon government agency response systems and resources in event of an emergency, so it may also be helpful to understand the elements of the agencies' response systems. ICS provides a convenient format for addressing the major elements of any emergency response operation.

The ICS structure has been used by many types of organizations for a large variety of emergencies. It provides a recognized standard for organizing response resources that has been successfully used to integrate resources from multiple locations and organizations. The response capabilities and analysis are based upon established characteristics of emergency response plans and systems as described in nationally recognized publications, regulations and local and state emergency plans. (A complete list of references used in preparation of this document is included in [Appendix A, Bibliography](#).) The objectives are tailored by consideration of conditions and needs of response agencies, businesses and the communities in and around CIP and local response agencies. Additional improvements, not specifically identified in this Guide, may be needed to fully achieve emergency preparedness objectives.

**Figure 3-1: Basic Elements of Incident Command**

The Campbell Industrial Park has numerous small- and medium-sized businesses without sufficient staff, resources and training to fully implement an ICS. Even the largest facilities in CIP rely heavily upon agency personnel for certain critical functions, such as public notification, warning and evacuation. Businesses in CIP have a critical interest in understanding agency plans for command and control of incidents in CIP so that they can provide effective assistance to City and County agencies and respond appropriately to situations at neighboring facilities that could affect their own employees.

As described in the City and County of Honolulu Emergency Operations Plan, there is a detailed structure for emergency management among agencies. Section V of the City and County Emergency Operations Plan identifies lines of authority within the State. Succession to authority within the City and County is also detailed. Appendix D of the City and County's Plan provides the detailed structure of the Emergency Operating Center, which is the heart of the Command and Control system.

The City and County utilizes an organizational model for Command and Control that has been developed with consideration of the Federal Emergency Management System guidance. Agencies within the City and County are charged with forming their own internal Incident Command Structure to establish Command and Control at the field level of agency emergency response efforts.

At the scene of an emergency, the City and County utilizes the Incident Command System for response to all emergencies and disasters. Incident Command, among other requisites, designates public safety officials (Fire, Police, EMS personnel, etc.) who will be responsible, upon their arrival at the incident scene, for the establishment of an Incident Command Post, initial notifications, and the safety, security, control and coordination of all response operations, not only at the scene itself, but also in surrounding areas that might be affected by on-going events. Refer to Table 3-1 for assigned incident commanders.

**Table 3-1: Assigned Responsibilities**

Type of Incident	Incident Commander
Man-made or Natural Emergency or Disaster, including Hazardous Materials Emergencies	Fire Department Representative
Terrorist Situations	Police Department Representative

For certain emergency operations, such as an oil spill to navigable waters, Incident Command may be relinquished to the appropriate state or federal agency. Until the arrival of the designated Incident Commander, another public safety officer may temporarily assume the duties of the Incident Commander.

A characteristic of Incident Command is establishment of a Unified Command Structure. Unified Command is a method for all agencies, companies or individuals who have jurisdictional responsibility, and in some cases, functional responsibility, to contribute to determining the overall objectives for the incident and selection of a strategy to achieve the objectives.

Businesses may participate in the Command and Control through the Incident Command System as described in the National Response Team's 'one plan' guidance. The ability of a business to effectively participate depends on the level of development of their internal emergency management system. Businesses subject to certain Resource Conservation and Recovery Act (RCRA) regulations, and facilities that develop hazardous materials response capability under HIOSH are required to utilize an ICS for emergency response.

Businesses' involvement in the Unified Command is determined by the level of development of their internal emergency response organization, the magnitude of the event and the availability of employees or company representatives during an emergency. Some larger businesses in CIP have developed their own internal Incident Command System and have developed plans to participate in Command and Control through the specified Unified Command structure within the ICS. Many smaller CIP businesses, with only a few employees and without large quantities of hazardous materials may not find it necessary to have trained emergency response personnel and detailed Command and Control assignments. When deciding whether or not a business can effectively participate in the Unified Command structure, the following should be considered:

- ◆ Has the business established an Incident Command System internally that is compatible with the City and County's Incident Command Structure?
- ◆ Does the business have sufficient knowledge and/or resources to make a significant contribution to the Command and Control effort?
- ◆ Are the business's ICS representatives trained in ICS terminology and operations?

## Section 3: Emergency Organization

---

- ◆ Does the incident involve a potential or actual threat to the business's personnel, equipment or property?
- ◆ Can the logistical needs of the ICS and the business be addressed to efficiently incorporate the business's input given the circumstances of the particular emergency event?

It should also be noted that smaller businesses that do not have sufficient needs to establish an ICS may participate at the request of the Incident Commander in an advisory capacity during an emergency.

Responsibilities for emergency response in federal, state and local governments are identified in detail in emergency plans prepared by the U.S. Government, the State of Hawaii, and the City and County of Honolulu. [Table 3-2](#) is a summary of responsibilities of local response groups as detailed in the Emergency Operations Plan for the City and County of Honolulu. This plan is enacted whenever disaster strikes the City and County of Honolulu.

Smaller emergencies that happen on a day-to-day basis are handled by City and County agencies without activation of all available response resources. As stated in the City and County Operations Plan, City agencies are responsible for developing their own operations plans and are to conduct emergency operations under the "Incident Command System." ICS is a method to organize and direct emergency response operations from a single point of command or leadership.

In event of a hazardous materials incident, the Honolulu Fire Department assumes the role of Incident Commander, and is therefore in command and has overall responsibility for all emergency actions during a hazardous materials release.

### 3.2 Facility Emergency Coordinators

All businesses with employees working in CIP should appoint a Facility Emergency Coordinator (FEC) as defined in the City and County Emergency Operations Plan. The Facility Coordinator is the business's link to emergency response resources provided by the City and County. The principle duties of the Coordinator include the following:

- ◆ Assisting in timely notification of employees and nearby individuals in event of an emergency.
- ◆ Timely reporting of emergencies to the Local Emergency Planning Committee (LEPC), the Hawaii State Emergency Response Commission (HSERC), and the National Response Center (NRC).
- ◆ Initial classification of an emergency to assist in determining appropriate action.
- ◆ Representing the facility in event of a hazardous materials release on or near their facility.
- ◆ Providing follow-up reports to the HSERC and the LEPC on the incident.

Additional information about the role of a Facility Emergency Coordinator is contained in [Section 4, Hazardous Materials Emergencies](#).

Larger industrial facilities with trained and equipped emergency response personnel will often have an internal response organization in addition to a Facility Emergency Coordinator. Under an Incident Command System, the Fire Department and the industrial facility may establish a “Unified Command Structure” which may be joined by other response agencies to enlist all available public and private emergency resources.

Smaller businesses typically have plans for evacuation and accounting of all personnel. The Facility Emergency Coordinator will lead these functions and will provide liaison to the Fire Department. Schools and other places of assembly should also have emergency plans that provide for evacuation, shelter and care of the groups expected to be present.

All businesses should work with the Fire Department and other emergency response agencies to develop a clear understanding of the needs, capabilities and expectations of each organization.

Table 3-2: Responsibilities of Local Emergency Response Agencies

	Responsible Local Agency P = Primary Responsibility S = Supporting Responsibility	ESF 1 Transportation.	ESF 2 Communications	ESF 3 Public Works/ Engineering	ESF 4 Firefighting	ESF 5 Information/ Planning	ESF 6 Mass Care	ESF 7 Resource Support	ESF 8 Health/Medical Services	ESF 9 Urban Search / Rescue	ESF 10 Hazardous Materials	ESF-11 Food	ESF 12 Energy

### **3.2.1 Command and Control of Hazardous Materials Emergencies**

Analysis of hazardous materials incidents over the past five years indicates that most incidents involved nuisance odors with a negligible potential for long-term adverse health effects. In fact, from an analysis of historical data for Oahu from the EPA and other sources, no off-site fatalities have been associated with the accidental release of hazardous materials at CIP. Large releases of hazardous materials resulting in serious offsite consequences are rare. Emergency response organizations must depend heavily on training, drills and exercises to practice command and control of hazardous materials (HazMat) incidents.

The analysis of vulnerabilities in CIP illustrates that hazardous materials incidents may develop very rapidly, potentially affect large areas, and require a relatively high degree of familiarity with the processes, equipment and circumstances of the release to effectively manage the emergency. Although the type of incidents which would potentially have severe consequences are very unlikely, emergency planning for CIP should address conservative assumptions of release conditions.

A typical ICS for effectively managing a large hazardous materials event is shown in [Figure 3-2](#). (It is provided for discussion purposes only and would not fit the needs of all HazMat emergencies. It may also need to be modified for consistency with various agency ICS organizations.) From interviews conducted with businesses in CIP and response agency personnel, it is noted that there have been few large scale drills and exercises to determine if existing plans satisfactorily address the need for close coordination of the Command and Control function between business and agencies. There was general concern expressed over issues involving Command and Control stemming from the relatively minor incidents that have occurred in the past.

**Figure 3-2: Typical ICS Organization for Large Scale Industrial Incident**

### 3.3 Liaison

The Liaison position in an ICS is the point of contact for representatives of other agencies. In a large emergency operation or disaster, many agencies may become involved in providing services and assistance. Not all agencies will be familiar with ICS and many will not have the need for a representative in a Unified Command structure. The Liaison Officer provides the necessary contact to agency representatives so that the Incident Commander can focus on the critical tactics and strategies needed for control of

the situation. Liaison is specifically addressed as a section in this report because of the importance of establishing communications with all agencies, businesses and community groups who have a role in emergency response.

During a natural emergency, such as a hurricane, the Emergency Operations Center (EOC), located in the Municipal building, is the center for Emergency Operations. Representatives from major offices in the City and County Government are present to assist in a Unified Command Structure. Individuals from the OCDA are designated to provide overall coordination of key functions.

### **3.4 Public Information**

Accurate and timely information is among the most critical needs for the effectiveness and safety of response operations. An ICS employs an Information Officer and includes procedures to meet information needs for informing the public of impending or actual emergencies or disasters. An ICS provides guidelines for instructing and advising the public on appropriate actions to take during an emergency. All agencies and businesses involved in emergency response have a critical need for accurate and timely information to protect their employees, property and the environment.

Annex S of the City and County's Emergency Operations Plan contains the Emergency Public Information Plan for the City and County's Emergency Operations Center. The Plan assigns responsibilities for coordination, preparation, and update of hazard-specific public information for the City and County to the OCDA. The OCDA is also responsible for providing information to the public and to response agencies before and during an emergency on conditions, protective actions, evacuation, and recovery.

Before an incident, the OCDA has the primary responsibility for establishing agreements among local and state agencies, the news media, and other organizations on how and when information will be developed and released. The CIP Compliance Coordinator, through the [State Department of Health, Clean Air Branch maintains the CIP Environmental Hotline](#), which can also be used as a media for disseminating public information.

A large amount of technical information has been assembled in the form of emergency plans, brochures and computer databases for the Island of Oahu. Agreements have been reached with the news media and other organizations on the flow of information during an emergency. These are detailed in the City and County Emergency Operations Plan.

### **3.5 Safety in Response Operations**

The work of the ICS Safety Officer is to assess hazardous and unsafe situations and to develop protective measures for assuring personnel safety. As a functional element of emergency planning, the protection of human life should take precedence over all other objectives. In both natural and man-made emergencies, the lives of the emergency response personnel and the public may depend upon the quality of information, the level of planning and education, and the availability of resources.

Numerous safety issues arise in the event of a natural emergency. Downed trees and power lines, washed-out roadways, damaged structures and secondary fires are a few of the potential hazards. In event of a tsunami or hurricane, damage to facilities in CIP may result in release of hazardous materials. The presence of hazardous materials will not be confirmed until the area is entered and inspected after the event. In HazMat events, the ICS has a functional position of Safety Officer as a member of the Incident Commander's staff.

Hazardous materials clean-up operations from natural emergencies may involve spills from more than one source and the exact nature of the hazards will be unknown. Spill clean-up contractors and employees of the businesses involved will need to be properly trained and equipped in order to complete clean-up operations safely.

The key to managing the hazards of emergency response is a well-prepared Site Safety Plan. A Site Safety Plan is required to be in place before any organized response to a hazardous materials incident. Federal and state environmental and safety regulations spell out the requirements for documenting and implementing such plans.

### **3.6 Response Operations**

In ICS, response operations involve the supervision and management of tactical activities involving the actual emergency situation. Only trained and properly equipped response personnel are usually part of response operations. The Operations Chief directly orders functional response units to perform tactical operations. These units may be divided by specific function, geographical area, or other means of identification. For response to emergencies in CIP, these units could include fire suppression, HazMat, search and rescue, emergency medical services, staging area management, or other functions as needed. For larger emergencies, Response operations may be divided into groups such as engine companies, strike teams, divisions, etc.

#### **3.6.1 Fire Response Capabilities**

The Honolulu Fire Department is one of the largest fire departments in the United States.

The Department is divided into five battalions that include:

<b><u>Type of Resource</u></b>	<b><u>Number</u></b>
Engines	42
Ladders	7
Quints (75 Ft. Aerial)	6
Tower Ladder (Ladder Truck w/basket)	2
Rescue Units	2
HazMat Units	2
Fire Boat	1
Tankers	5
Helicopters	2
Helicopter Tender	2
Brush Truck	1

The Fourth Battalion protects the leeward side of the Island with seven engine companies, 1 HazMat unit, two ladders, three quints, 3 tankers and 1 brush truck. Station 40 is the Fourth Battalion's headquarters and is located at the entrance to CIP. It provides an engine, a ladder and a HazMat company within a few minutes of any Park location.

The capabilities of the Fourth Battalion include first response, incident command, fire fighting, hazardous materials detection and control and salvage. Utilizing the water main system with hydrants located 200 to 300 feet apart throughout most of CIP, the Fourth Battalion can be expected to handle most structural fires and releases of hazardous materials.

Conditions within CIP are generally favorable for structural fire protection. The streets are wide and buildings are generally adequately spaced. Many buildings are of noncombustible construction and some are equipped with sprinkler protection. Bulk quantities of lumber, plastics, dry goods and other materials at some sites do provide fuel sources for severe fires involving combustible materials. In addition to the large quantities of hazardous materials, flammable and combustible liquids and gases are used in small quantities in many CIP businesses. The pre-fire planning activities conducted by the members of the Fourth Battalion provide important information for planning fire responses to structural and combustible material fires.

The potential for fires involving flammable liquids and gases include the scenarios described in the vulnerability analysis and a large number of other smaller scenarios. The worst case scenarios could include LPG vapor cloud releases and scenarios that involve flame impingement on horizontal pressure vessels. Vapor cloud releases would necessitate immediate shutdown of motorized equipment and the immediate evacuation of all CIP residents in and around the release point. For very large vessels, such as spheroids, the evacuation area may include areas up to a mile away. If the incident involves flame impingement onto pressure vessels, cooling water will need to be applied

as soon as possible (preferably within 10 minutes) to avoid a potential boiling liquid expanding vapor explosion (BLEVE). Fire fighting operations must be pre-planned in order to accomplish these requirements. The refineries in CIP have some of the largest stored quantities of LPG and flammable liquids. Both refineries have a well-trained and equipped fire brigade to immediately respond to such events.

### 3.6.2 HazMat Response Capabilities

A HazMat Response Unit provides the specialized skills and equipment needed to effectively manage response to a hazardous materials release. The potential for very serious hazardous materials releases does exist in CIP. Most businesses in CIP have the potential for experiencing a hazardous material emergency. Of these, there are only a few businesses with sufficient quantities of hazardous materials to potentially cause a significant hazard beyond park boundaries.

HazMat response capability includes trained and equipped members of HazMat teams from major industrial facilities, such as Tesoro and Chevron, to specialized response personnel who are limited to response to specific product emergencies, such as The Gas Company, Oahu Gas Company and Brewer Industries. Most businesses in CIP do not respond to incidents involving unknown products or other companies' products for which they are not directly responsible.

The Fourth Battalion of the Honolulu Fire Department has a fully operational dedicated HazMat response company. This unit is equipped for detection of chemical hazards as well as leak and spill control. It carries chemical protective equipment for firefighters and an extensive computer database to provide technical information on chemical hazards. Response time to any Park location from Station 40 is approximately 3 minutes. Another HazMat Unit is located at Station 32 under Special Operations Command. Response time from Station 32 would probably be at least 30 minutes unless there are traffic delays or other road hazards.

### 3.6.3 Rescue Operations

Rescue units may be needed in event of confined-space accidents, trench collapse, building collapse, flooding, release of hazardous materials, vehicle accident or other events where individuals are trapped in a perilous situation. Confined-space incidents and trench collapses are two of the most frequent rescue scenarios related to industry. Rescue from elevations, such as building roofs, may also be required. In events that involve an individual's loss of breathing, there are only a few minutes of opportunity to rescue the victim before death or permanent damage. Some of the larger businesses in CIP have a self-contained breathing apparatus and individuals trained in rescue operations that could be used in performing a rescue at their locations. The Fourth Battalion is equipped with a breathing apparatus and has rescue capability. Rescue companies are also available from First and Second Battalions of the Honolulu Fire Department.

### **3.6.4 Emergency Notification**

The OCDA has established detailed procedures for notifying the public in event of an emergency. The emergency sirens throughout the Island provide initial warning to the public. Most sirens cannot be individually activated at the present time, so that all sirens on the Island are normally activated simultaneously. The Emergency Alert System (EAS) provides additional information and warning through local radio and television stations. In some areas of CIP, the sirens do not provide a sufficient volume to meet the requirements of the Civil Defense Agency. Additional sirens are planned for installation as the State Civil Defense budget allows. [Map number 3-1](#) shows the approximate area of coverage of the siren system.

In a cooperative effort with State Civil Defense and Oahu Civil Defense, CLEAN has purchased and distributed approximately 500 Emergency Alert “Sentinel” to most Campbell Industrial Park businesses and other local establishments. When properly installed and maintained, these radios silently monitor local commercial radio stations for emergency alert broadcasts, warn the user with a tone and broadcast any message sent through the Emergency Alert System. Oahu Civil Defense and other emergency response agencies can issue special warnings to radio stations to be broadcast on the Emergency Alert Radios. Emergency alerts for hurricanes, tsunami or other emergency that are broadcast over the established radio frequencies will also trigger the Emergency Alert Radios.

The EAS is most effective for emergencies that are island-wide and for those events that have some predictability. HazMat incidents, such as the release of toxic or highly flammable materials in a local area, require an immediate, localized warning. The Emergency Alert Radios provide localized warning to the locations in and around the Park that are most likely affected by a hazardous materials release.

In addition to the EAS system, OCDA has an information line to provide up-to-date information on natural emergencies, storm watches and storm warnings. [Volume II, Section 5, Directory, lists the Oahu Civil Defense telephone number](#) for recorded messages.

## **3.7 Planning**

The Planning Function of an ICS is responsible for the collection, evaluation, and dissemination of tactical information about the incident. The Planning Section maintains information on the current and forecast situation, and on the status of resources assigned to the incident. The Planning Section plays a key role in the development of an Incident Action Plan. The Incident Commander and the Operations Section depend upon the ability of the Planning Section to provide accurate and timely information, to develop alternatives for mitigation and control, and to plan actions for future operational periods. Planning Sections in ICS require personnel resources, written reports, reconnaissance, and technical data about the incident. This function performs best in a comfortable and sheltered environment with adequate lighting, computer equipment, data resources, and communications equipment.

Field personnel assigned to the Planning function track resource usage and status, and provide reconnaissance of the incident. A typical function of the Planning Section is to establish a unit responsible for air monitoring and modeling of release conditions. Currently, no business in CIP is providing complete assessment capabilities of downwind conditions during a release. In some parts of the U.S., contractual arrangements have been made with industrial hygiene and health assessment companies for emergency services of downwind monitoring. Collecting information about the level of air contaminants provides valuable information to the Incident Command and it often provides peace of mind to the public. Many companies favor collecting such data as a means of protecting themselves against frivolous and unfounded claims of damage.

The Honolulu Fire Department Operations Plan identifies a Planning Section as part of its ICS. In recent times, there have been very few hazardous materials incidents, if any, that have required the development of a fully functional Planning Section. The scenarios mentioned in this report identify the potential need for more extensive development of a Planning Section. A large petroleum storage tank fire, for instance, may require substantial planning activities. There are other potential scenarios throughout CIP that could involve the need for planning during response activities. For natural emergencies, this function is performed at the EOC on Oahu.

### **3.8 Logistics**

The Logistics Section in the ICS details critical services to support emergency response personnel. Logistics would provide the organization, materials and services for communication, medical, food, tools and equipment, fire fighting foam supplies, security, maintenance services and other necessities. This section is also responsible for ordering and delivering supplies and equipment and maintaining records.

Emergency incidents vary widely in the need for logistical support. In the case of a major oil spill that would reach the shoreline, logistical needs may be intense. Many smaller incidents, a fire or hazardous materials release, will not need logistical support outside of the initial response personnel. Logistics planning should be based on a realistic, worst case need for each particular service area. Most Logistics Section planning may never be used, but it should be kept in mind that logistical needs of a very large incident cannot be met without some planning ahead of time.

Logistical planning in the City and County Operations Plan brings the full resources and capabilities of the City and County to service for emergency support. City and County, volunteers, private organizations and federal and state resources may be brought to bear as needed during a major crisis.

#### **3.8.1 Emergency Communications**

Communications systems in an Incident Command System include the components of hardware, communications protocols, and organizational structure. A Communications Unit may be assigned under the Logistics Section of a standard ICS design to facilitate

the development of a communications plan and the deployment of hardware or runners for transferring information between and among response groups.

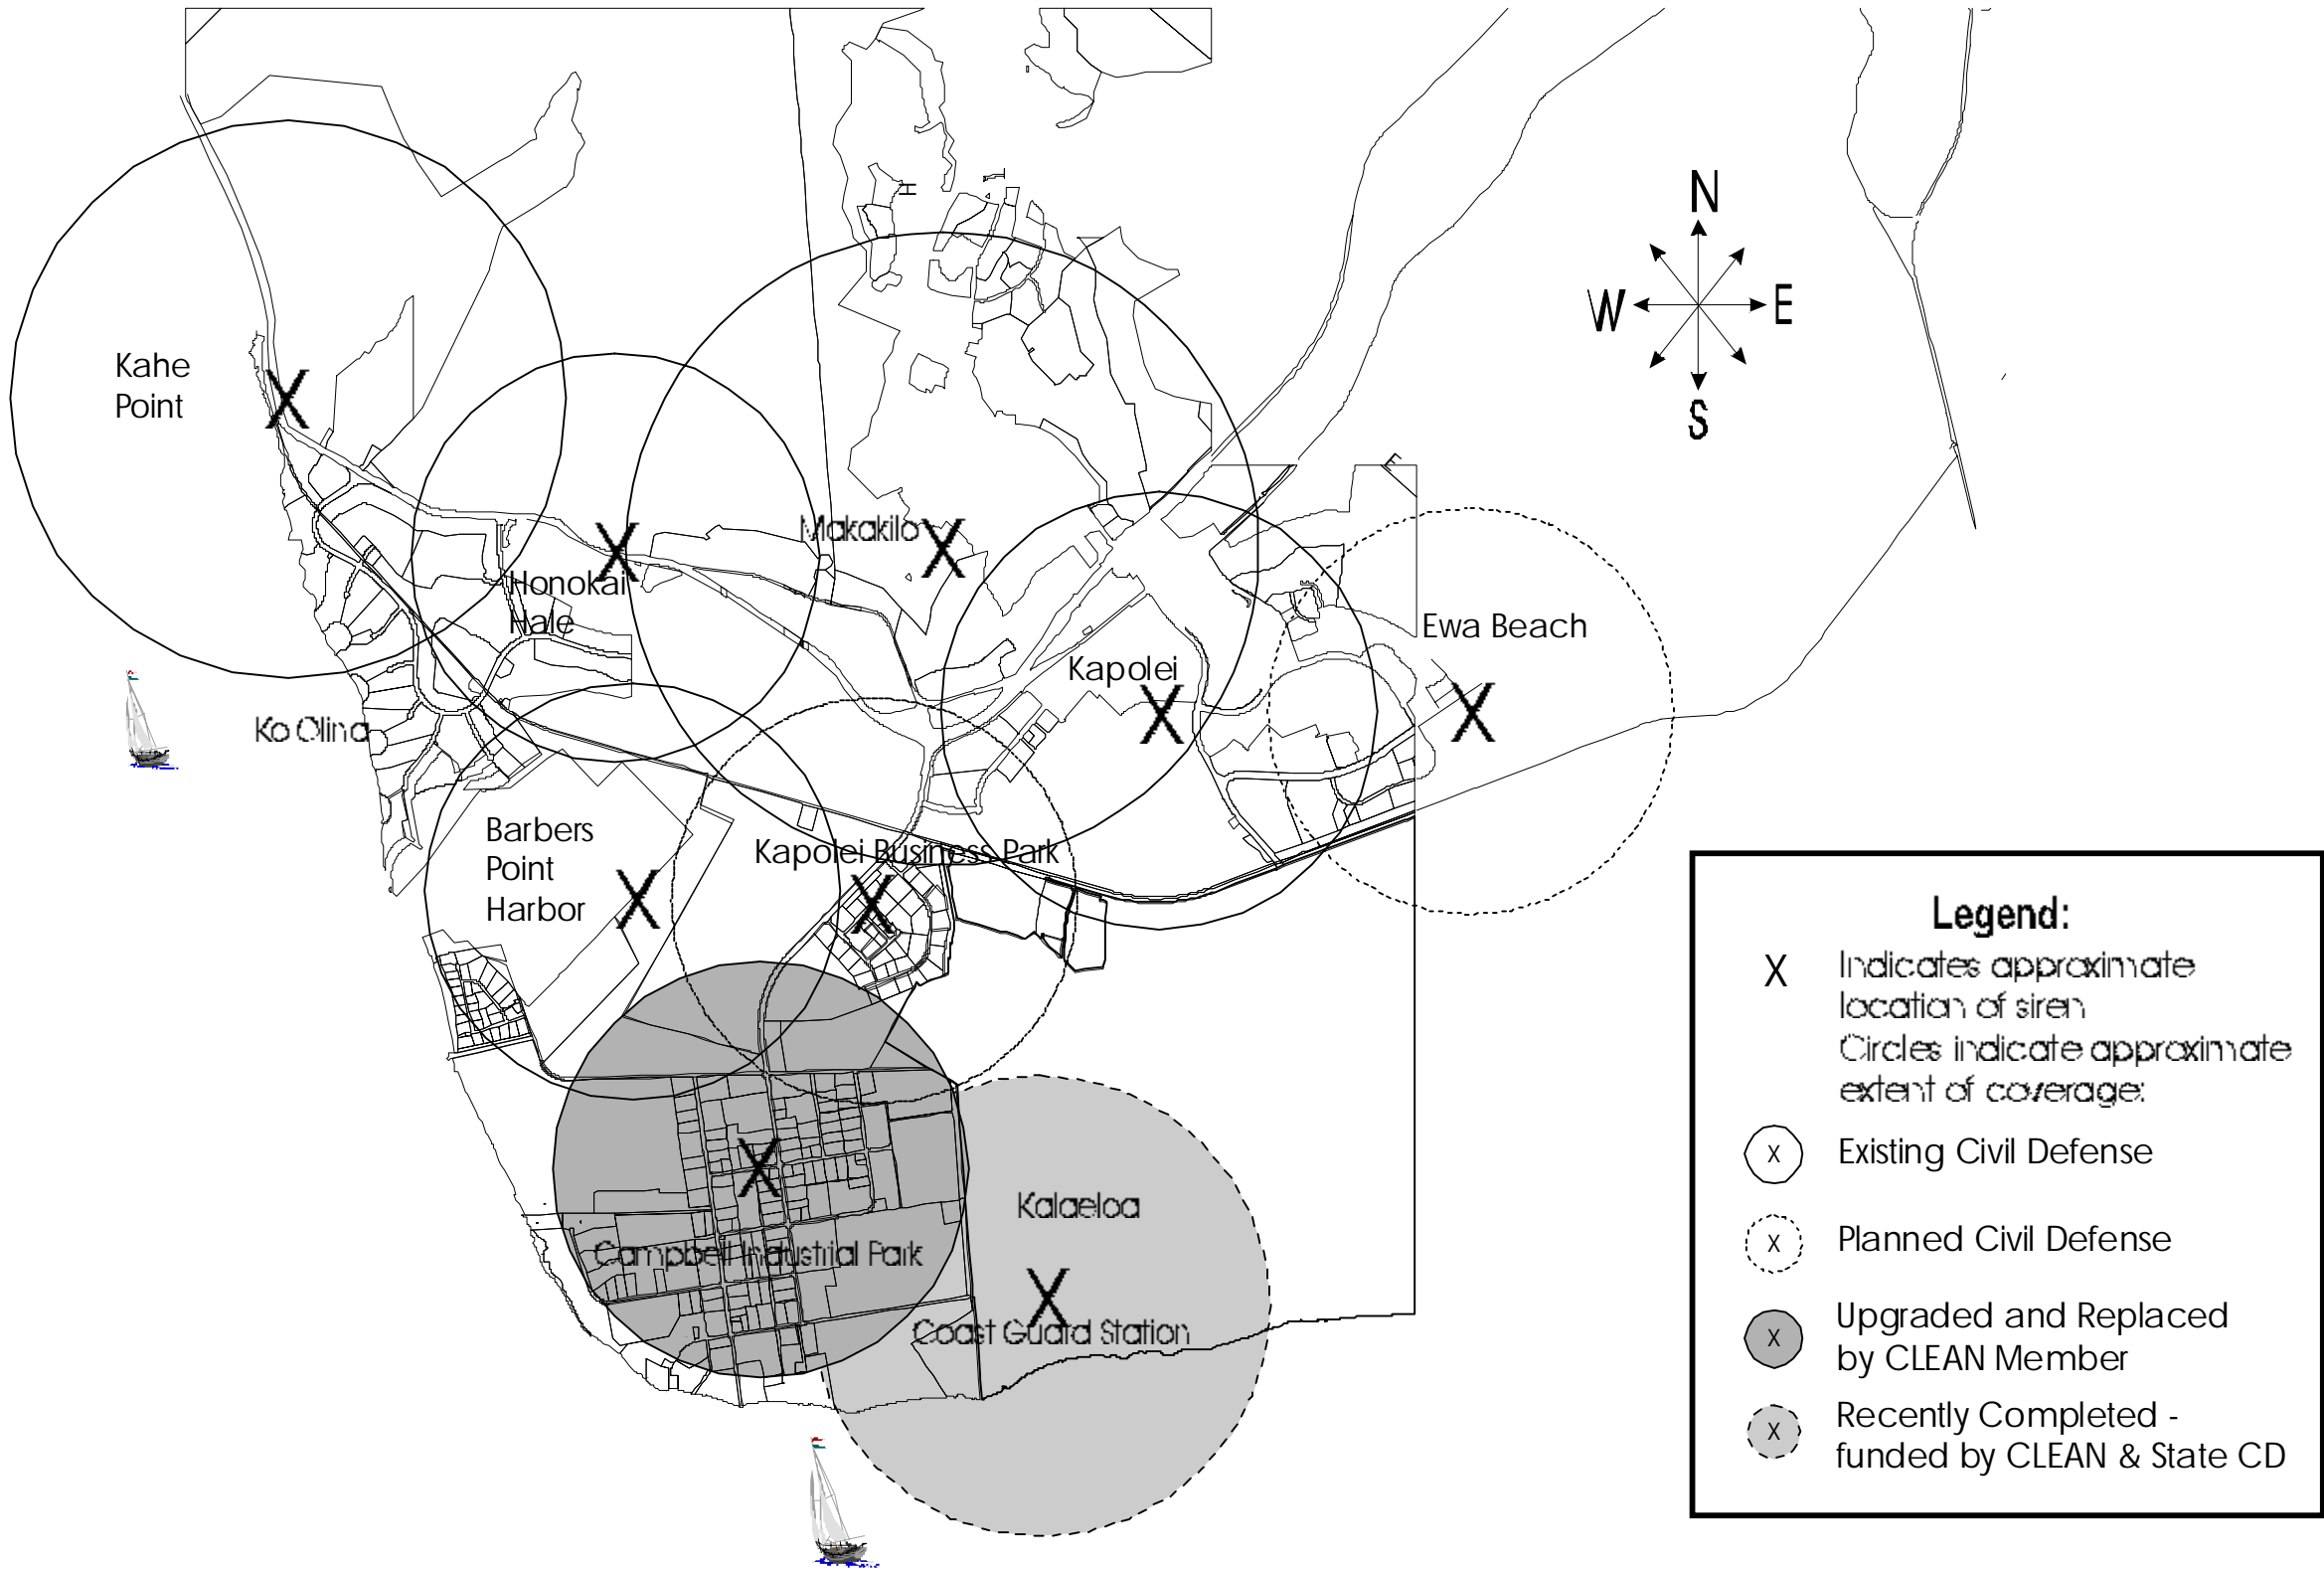

Two-way radios play a very important role in emergency management. They usually provide a reliable means of communication, even if phone lines and power lines are damaged. Radios are usually individually programmed to work on a specific wavelength or frequency. The Federal Communications Commission licenses frequencies, so that the number of individuals trying to communicate on a specific frequency at the same time is limited. Newer radio systems have some very useful features, including the capability to be programmed in the field to various frequencies as needed for a particular emergency. The City and County of Honolulu is currently in the process of converting its existing radio systems to a modern 800 megahertz system. The new system will help ensure the compatibility of radio frequencies between various City and County agencies that are involved in emergency response. Fire, police, and other response units would be able to work more efficiently by having direct communications abilities with Incident Command at the scene of an emergency.

Telephone communications may be disrupted during an emergency. Landlines may be downed by high winds and cellular phone call volumes may exceed local capacity.

### **3.9 Finance**

The Finance Section of an Incident Command System plays a very important role in large incidents that involve multiple agencies, contractors and businesses. Emergency management activities may span over weeks or even months. Clean-up activities and large fire-fighting activities may involve large costs. The Finance Section provides a valuable service in establishing cost control guidelines, recordkeeping and accounting functions, billing, auditing, claims management and other financial services.

Map No. 3-1: Civil Defense Emergency Warning Sirens  
Campbell Industrial Park Area

## 4. Hazardous Materials Emergencies

---

### 4.1 Hazardous Materials Incident

Hazardous materials are chemical substances, which if released or misused can pose a threat to the environment or health. Hazardous materials identified in the Park include explosives, flammable and combustible substances, poisons, and radioactive materials. These substances may be released as a result of transportation accidents or because of chemical accidents in facilities.

Chemical emergencies can occur in almost any location. Chemicals are found in most homes, schools, and hospitals, and they are frequently transported over roadways. Businesses within CIP use a wide variety of hazardous chemicals in manufacturing, power generation, and other activities. Historically, there have been a number of odor complaints, which have been associated with releases of hazardous chemicals or other substances from within CIP. Although catastrophic releases from CIP have not occurred, emergency planning efforts should always include contingency plans for chemical emergencies.

Chemical emergencies that result in serious off-site injuries or death are rare, but the potential for such releases does exist. Because chemical release hazards develop so quickly and unpredictably, typical evacuation planning for natural emergencies is not very effective. Shelter-in-place, taking cover in a sealed-off room, may be the only viable option. When a chemical emergency occurs, a number of factors must be considered by businesses, the public, and Incident Command to determine the best course of action:

- ◆ The chemical release may or may not be visible.
- ◆ The released chemical may or may not be flammable.
- ◆ The wind may switch directions at any moment, changing the hazard zone.
- ◆ The wind speed generally determines how fast a release cloud moves, how fast it will penetrate a structure, and how quickly it will dissipate.
- ◆ A safe escape route may not be known.
- ◆ Transportation incidents may block the escape route.
- ◆ The area affected by a hazardous material release may be unsafe and should only be entered by trained responders using appropriate personal protective equipment.
- ◆ There may not be adequate warning before exposure occurs.
- ◆ The release of chemicals may be a short duration, intermittent, or continuous.
- ◆ Two or more chemicals may be mixed to form an unknown hazard.
- ◆ At the onset of a release, the toxicity of the released chemical and the quantity released may be unknown.
- ◆ Individuals may be indoors or outdoors.
- ◆ Individuals in the greatest danger are those closest to the release with the least amount of time to react.

## Section 4: Hazardous Materials Emergencies

---

- ◆ The effectiveness of shelter-in-place is dependent upon timely warning and response, the tightness of the structure, and whether or not interior rooms are available.

These challenges to emergency planning require that businesses and individuals know what actions to take and be prepared to take them at the first sign of danger, before trained emergency response personnel arrive. This section of the Guidebook provides valuable information for those who must take immediate action to protect themselves or others at the onset of hazardous materials incident.

Businesses that handle or store certain designated quantities of hazardous materials must comply with the State of Hawaii's Emergency Planning and Community Right to Know Act (HEPRA). State law requires facilities to submit a chemical inventory, calculate annual emissions and report certain releases immediately to the State Department of Health. More information on the regulatory requirements and on available inventory and release reporting data is available on the Internet at the Department of Health web site <http://mano.icsd.hawaii.gov/doh/index.html>.

### 4.2 Facility Emergency Coordinators

Facility Emergency Coordinators (FEC) are individuals who are knowledgeable of their company's hazardous materials operations and are designated under the City and County Emergency Operations Plan to serve during an emergency. As outlined in the City and County of Honolulu Emergency Operations Plan, the functions of the Facility Emergency Coordinator include:

1. Represent the facility/transportation company, as appropriate, in all matters concerning releases of Extremely Hazardous Substances (EHS) at or near their facilities or along transportation routes, as appropriate, and make determinations/recommendations necessary to implement the City and County Plan.
2. Develop procedures for a quick and timely notification system for both in-house/on-the-road hazardous material incidents and subsequent notifications to the Honolulu Fire Department (HFD).
3. Submit MSDSs, Tier II reports, and other information to the LEPC, HFD, and HSERC. Provide local hospitals with information needed for planning response and treatment for any special hazards.
4. Report to the National Response Center (NRC), LEPC and HSERC in a timely manner as required by regulation.
5. Initially classify any incident according to the Emergency Response Level Classification System.
6. Initiate evacuation in the immediate affected area as needed. The FEC may elect to warn other surrounding facilities and/or vulnerable facilities (hospitals, schools, etc.) if a major release or incident has occurred.
7. Provide a representative to the Incident Command Post (ICP). Upon request, send a representative to the City Emergency Operations Center (EOC) to participate in Emergency Information Center activities.

8. When requested and if possible, provide expertise and resources to City and/or State agencies to help mitigate the effects of a hazardous materials incident.
9. Provide follow-up reports to the HSERC and the LEPC on the incident.

The extent to which a Facility Emergency Coordinator can perform the duties listed above will depend upon the individual's training, experience and qualifications. Mandatory training requirements under occupational safety and environmental protection regulations should be consulted.

#### **4.2.1 Facility Emergency Coordinator General Guidelines**

The general guidelines to be followed by the FEC as in accordance to the City and County of Honolulu Emergency Operations Plan are as follows:

1. Make initial assessment of the situation.
2. Take precautions and warn or notify all personnel within affected area of the release. Follow procedures in the Facility Emergency Response Plan.
3. Notify the Honolulu Fire Department and the State Department of Health of the situation.
4. Give the following information to the best of your knowledge:
  - a) Chemical name(s) or substance(s) involved in the accident or release.
  - b) Information about the hazardous nature of the material released.
  - c) Estimate the quantity of substance(s) released.
  - d) Time and duration of the release.
  - e) Medium or media (air, water, etc.) into which the release occurred.
  - f) Known or anticipated acute/chronic health risk(s), and where appropriate, advice regarding medical attention necessary for exposed individuals.
  - g) Proper precautions to take as a result of the release, including evacuation.
  - h) The name and telephone number of the person to be contacted for further information.
5. You or a facility person should meet the arriving Fire Company and/or HazMat team.
6. Have all information on the chemical(s) involved in the release available to the Fire Company or HazMat team.

#### **4.2.2 Hazardous Material Emergency Response Classification System**

The City and County of Honolulu has developed a Hazardous Materials Classification System to assist agencies and businesses in communicating during hazardous materials emergencies. The system is provided to enable emergency responders to rapidly and accurately understand potential hazards and notification requirements. The response levels of a HazMat emergency that have been defined in the City and County of Honolulu

## Section 4: Hazardous Materials Emergencies

Emergency Operations Plan are shown in Table 4-1. The Facility Emergency Coordinator should consult this table when communicating with response agencies.

**Table 4-1: Hazardous Material Emergency Response Classification System**

Response Level	Incident Description	Notifications*
<b>Level I -</b> Potential Emergency Condition	Situation, release or threat of release, which can be, controlled by the first response agencies. Limited to a confined area and does not pose an immediate threat to life or property. May evacuate immediate area or structure involved.	<u>City</u> : Honolulu Fire Department, Honolulu Police Department, Emergency Medical Services, Oahu Civil Defense, EOC Staff as required, LEPC <u>State</u> : State Dept. of Health <u>Federal</u> : USCG Marine Safety Office (as required), National Response Center
<b>Level II -</b> Limited Emergency Condition	Release or situation that poses a potential threat to life or property within a limited distance. May require limited evacuation of the surrounding area outside the facility.	All agencies in Level I <u>City</u> : EOC Staff <u>State</u> : State Civil Defense, Dept. of Land and Natural Resources, Dept. of Transportation and others as required <u>Federal</u> : EPA <u>Private</u> : American Red Cross, public utilities, support organizations
<b>Level III -</b> Full Emergency Condition	Release or situation that poses a severe threat to life and property. Requires expertise or resources of the City, State, Federal agencies, or private organizations. Will probably require large-scale evacuation.	All agencies in Level I and II, and the following as required: <u>Federal</u> : Dept. of Defense (Mutual aid Fire, and emergency medical), FEMA, Regional Response Team, and others as required.
<b>Recovery Condition</b>	Immediate mitigation has been done and life-threatening situation has been resolved. Start of the mitigation and recovery stage of the incident.	All agencies in Level I, II, and III as required. Additional City, State, Federal, and private agencies as required by the Incident Commander

\*Notification requirements for use by the City and County's Incident Commander.

**4.2.3 Facility Emergency Coordinator Checklists****4.2.3.1 Response Level I - Potential Emergency Condition**

- ☐ Make an initial assessment of the situation and assign an initial Emergency Response Level Classification to the incident.
- ☐ Alert all elements of the Facility Emergency Response Plan and Procedures.
- ☐ Promptly notify local authorities.
  - Honolulu Fire Department: 911
  - LEPC: 523-4121
  - State Department of Health – Hazard Evaluation and Emergency Response: 586-4249. After hours, weekends, holidays: 247-2191

Emergency notification information requirements:

- The following information should be provided immediately by the person performing the emergency notification (to the extent known at the time of the notice and so long as no delay in responding to the emergency results):
  - Chemical name(s) or substance(s) involved in the release.
  - Indication if substance is on list referred to in the Community Right-to-Know Act (CRTK) Regulation Section 302 (a).
  - Estimate of the quantity of the substance(s) released.
  - Time and duration of release.
  - Medium or media (air, water, etc.) into which the release occurred.
  - Any known or anticipated acute or chronic health risk(s) associated with the emergency and, where appropriate, advice regarding medical attention necessary for exposed individuals.
  - Proper precautions to take as a result of the release, including evacuation (unless such information is readily available to the community emergency coordinator) pursuant to the Emergency Plan.
  - The name and telephone number of the person(s) to be contacted for further information.
  - Address or description of location where release occurred.
  - **Emergency Response Level Classification: I II III**
- ☐ Notify the National Response Center (NRC) at (800) 424-8802 if amount of substance is above the reportable quantity.
- ☐ Direct facility personnel to respond to and contain the spill/release, if possible.
- ☐ Inform the first responder on scene of the current status and situation of the incident. Provide all information or sources of information to the first responder or incident commander, when requested.
- ☐ Provide a representative to the ICP, if one has been established.

## Section 4: Hazardous Materials Emergencies

---

- ☐ Recommend population protection measures off-site in-place sheltering or evacuation. (Make this determination in coordination with Senior Fire Department official.)
- ☐ Provide periodic situation reports to the on-scene ICP, if established, and the City EOC, if activated, at maximum 30-minute intervals.
- ☐ If releases are occurring, provide exposure estimates and projections of the affected area to local authorities.
- ☐ Augment facility personnel and equipment resources and alert mutual aid company/industry agreements to standby to provide needed assistance.

### 4.2.3.2 Response Level II - Limited Emergency Condition

- ☐ Complete Response Level I actions (if not previously completed).
- ☐ Activate required elements of the Facility Emergency Response Plan and Procedures.
- ☐ Promptly notify local authorities and request emergency assistance.
- ☐ Contain spill/release, if possible.
- ☐ Protect facility personnel through in-place sheltering or evacuation. (Consider factors affecting spill/release, rate of release, weather conditions, product, time elapsed since release, etc.)
- ☐ Provide periodic situation reports to the ICP and the City EOC at maximum 30-minute intervals.
- ☐ Provide facility representative to OCDA to assist Information Control Center in responding to queries for information.
- ☐ Dispatch and assist in activating air monitoring teams and associated communications.
- ☐ Provide on-site meteorological conditions and dose estimates and projections to off-site authorities to assist in assessing the situation and determining the affected area.

### 4.2.3.3 Response Level III - Full Emergency Condition

- ☐ Complete Response Levels I and II actions (if not previously completed).
- ☐ Activate the Facility Emergency Response Plan and Procedures.
- ☐ Provide periodic situation reports to the ICP and the City EOC at maximum 15-minute intervals.
- ☐ Assign a senior facility official to augment the ICP and City EOC, upon request, to assist in holding press conferences and issuing emergency public information.
- ☐ Provide recommendations regarding in-place sheltering or evacuation of residents of the affected area.
- ☐ Augment facility personnel and equipment resources by activating mutual aid company/industry agreements.
- ☐ Make all trained facility personnel and equipment available to assist in the emergency response effort.

- ☐ Make senior facility staff personnel available for consultation with City/State authorities, upon request.

### 4.2.3.4 Recovery Condition

- ☐ Cooperate with City, State, and/or Federal public health and medical personnel to determine when it is safe to authorize re-entry into the affected areas.
- ☐ Cooperate in inspecting/testing water and sanitation systems to determine if water is safe for drinking.
- ☐ Initiate on-site and off-site clean up of hazardous materials and contaminated items in coordination with authorities.
- ☐ Arrange for proper disposal of hazardous material and contaminated items in accordance with City, State, and/or Federal guidance and regulations.
- ☐ Develop a long-term monitoring capability in accordance with City, State and/or Federal guidance and regulations.
- ☐ Cooperate in proceedings to determine legal responsibility for the incident and for claims of injury or damage.
- ☐ Submit the follow-up written report on the incident to the LEPC and the State Department of Health.

### 4.2.4 First Responder Checklist

The City and County of Honolulu has established a First Responder Checklist for use by trained First Responders to a HazMat incident. First Responders may use the following checklist only if they are properly trained to respond to such events. **Caution: Use appropriate personal protective equipment when responding to a hazardous materials incident.** Consult the North American Emergency Response Guide (NAERG) for protective measures. All other individuals should refer to the checklist provided in [Section 5.1, HazMat Checklist](#).

When approaching the scene of an accident (fixed site or transportation) involving any cargo, the person first responding to the scene should follow the guidelines below:

- ☐ Approach incident from an upwind and uphill direction, if possible. Shut off engine and keep vehicle a safe distance away to prevent ignition of vapors.
- ☐ Do not walk into or touch any spilled materials.
- ☐ Avoid inhaling fumes, smoke, and vapors.

Note 1: Even if the material is a common product (i.e., gasoline), breathing any chemical over a long period of time can be detrimental to health.

Note 2: Do not assume gases or vapor are not present because of lack of smell. Many products have no smell or can dull the sense of smell in a short time.

**NOTE 3: IF CHEMICALS CANNOT BE IDENTIFIED, TREAT AS TOXIC. DO NOT ENTER THE AREA.**

## Section 4: Hazardous Materials Emergencies

---

- ☐ Survey the scene and adjacent area from a safe distance to determine conditions and hazards.
- ☐ Call 911 or notify by quickest available means the nearest Police or Fire Department Station. City vehicles equipped with a radio may call their dispatch or Oahu Civil Defense during normal work hours. Provide as much of the following information as possible:
  - Name and telephone number/call sign of individual making the report.
  - Location of the incident and situation (car accident, leaking container, facility fire, etc.)
  - Determine the chemical name from: the Facility Emergency Coordinator, the vehicle driver, a CHEMCARD in the cab of the truck, the cargo bill of lading, or from placards and labels on the truck and/or containers.
  - Chemical Description
  - Amount of Chemical
  - Time of the Release
  - Duration of the Release
  - Wind Velocity and Direction
  - Number of Injured
  - Number of Dead
  - Known Health Effects
  - Assistance Required
  - Precautions or Advice
  - Name of the FEC or Owner/Operator.
  - **Emergency Response Level Classification: I II III**
- ☐ Assume Incident Command and establish an Incident Command Post at a visible, safe, and upwind location. Make continuous reports to the EOC.
- ☐ Set up a security perimeter by using a barrier tape, or flares (if material is not flammable). Utilize available personnel to direct vehicular or pedestrian traffic.

Note 1: The security perimeter may shift with any change in weather conditions.

Note 2: Keep lines of communication open with personnel involved in the security perimeter to advise of any changes.

- ☐ Locate and interview the Facility Emergency Coordinator, responsible party, or witnesses.
- ☐ If hospitalization of personnel or victims is required, inform EMS personnel of any known or suspected contamination, establish primary decontamination, and provide EMS with hazardous materials data (possibly by the use of Material Safety Data Sheet(s) (MSDS)). It also is important that a receiving hospital be informed of any known or suspected chemical contamination.

Note: St. Francis West Medical Center-West normally functions as the primary facility for general medical emergencies emanating from Campbell Industrial Park. In the case of situations involving hazardous materials contamination, Saint Francis Medical-West and the Honolulu Fire Department are agreed that Saint Francis West Medical Center-West

may provide secondary decontamination support. In this regard, St. Francis Medical-West may not be able to preclude general community walk-in situations, but triage will be performed and assessed according to information and circumstances available to the Medical Center at the time.

### **4.3 Potential Hazardous Materials Release Scenarios**

Historically, most chemical releases have been small quantity releases, which may not exhibit the same potential hazards as large releases. Small quantities of highly toxic or flammable gases for instance, do not form dense vapor clouds with downwind hazards. Even ordinary household chemicals, which are present at most businesses, can result in a HazMat incident. [Table 4-2](#) provides a partial list of accident scenarios identified for typical industrial sites. Note that there are many other chemicals that could result in a hazardous materials incident that are not identified in the table.

## Section 4: Hazardous Materials Incident

**Table 4-2: Potential Hazardous Materials Release Scenarios**

Type of Release	Examples	Description	Precautions
Extremely Hazardous Chemicals	Chlorine	Liquefied gas stored in cylinders up to 1 ton. May form a dense gas cloud and migrate downwind if released. Very toxic to breathe. May cause serious injury or death if concentration is sufficient. Large releases are rare due to the construction of storage containers. Detectable by smell at very low concentrations.	Cloud moves about as rapidly as the wind is blowing. Move upwind or crosswind, or shelter-in-place.
	Sulfur Dioxide	Liquefied gas stored in cylinders up to 1 ton. May form a dense gas cloud and migrate downwind if released. Very toxic to breathe. May cause serious injury or death if concentration is sufficient. Large releases are rare due to the construction of storage containers. Detectable by smell at very low concentrations.	Cloud moves about as rapidly as the wind is blowing. Move upwind or crosswind or shelter-in-place.
	Sulfur Dioxide Mixture	From refinery operations and stack emissions. Usually involves relatively low concentrations of sulfur dioxide mixed with smoke. May be heavier than air and settle if the weather conditions create a stable atmosphere. Detectable by smell at very low concentrations. Produces an unpleasant odor that usually causes transient health effects, such as irritated eyes and itchy throat. Releases from stacks do not usually pose an immediate danger to life or health. Sulfur dioxide may cause serious injury or death in high concentrations.	Evacuation is usually not necessary, except for elderly or those with breathing impairment. Avoid exposure to visible smoke or strong odors. Move upwind or crosswind, or shelter-in-place. Seek medical attention if your condition worsens. Verify what has been released before you assume there is no danger.
	Ammonia	Liquefied gas stored in containers up to 25,000 gallons. May form a dense gas cloud and migrate downwind if released. Toxic to breathe. May cause serious injury or death if concentration is sufficient. Large releases are rare due to the construction of storage containers. Detectable by humans at very low concentrations.	Cloud moves about as rapidly as the wind is blowing. Move upwind or crosswind or shelter-in-place.
	Hydrogen Sulfide	Very toxic byproduct of petroleum refining, rotting vegetation and other natural and man-made systems. Slightly heavier than air and detectable by human smell at extremely low concentrations. Has a characteristic rotten egg odor.	May drift downwind and cause injury or death if concentrations are sufficient. Associated with confined-space entry fatalities in tanks, vessels and sewers. Due to its physical properties, it usually disperses to less hazardous levels before drifting downwind.

Table 4-2: Potential Hazardous Materials Release Scenarios (continued)

Type of Release	Examples	Description	Precautions
Highly Flammable Gas	Butane, Propane and Other Hydrocarbons, Hydrogen, etc.	Gases that are heavier than air may accumulate in low areas and may ignite or explode without warning. Flammability, rather than toxicity is usually the primary concern. Sources include process units, pipeline leaks or compressed gas cylinders.	Shut off all sources of ignition. Cloud moves about as rapidly as the wind is blowing. Move upwind or crosswind. Shelter-in-place is not usually advisable for protection from flammable vapor clouds.
Fires	Fire may involve ordinary combustible materials, highly flammable materials, plastics, toxic materials, flammable and combustible liquids, insecticide, etc.	Smoke may contain toxic materials and should be avoided. Secondary explosions and extreme radiant heat may result if the fire causes failure of pressurized vessels.	Stay upwind, evacuate if ordered. Move out of the path of the fire. Never move toward the fire to watch it burn. Safe evacuation distances may be as far as one mile, depending on the circumstances.
Pesticides, Herbicides, Fungicides and Other Poisons	Poisons may be spilled from their containers, improperly sprayed or may be entrained in smoke from a fire.	Odor may not provide adequate warning of the hazard. Symptoms may not be noticed at the time of the exposure.	Stay upwind. If you believe you have been exposed, seek medical assistance immediately. Try to identify the compound or trade name. For direct contact, remove clothing and flush skin/eyes for at least 15 minutes.
Acids and Caustics	Sulfuric Acid, Hydrochloric Acid, Sodium Hydroxide	Skin contact is particularly hazardous, acid or caustic mists usually do not travel very far, but near the point of release they are toxic.	Remove clothes from exposed area. Wash thoroughly for at least 15 minutes if you believe you have contacted corrosive chemicals. Stay up wind.
Asphyxiants	Spills of Liquid Nitrogen, CO <sub>2</sub> , Argon or Other Inert Gas.	Inert gas may dilute the oxygen in the air to the point of danger. CO <sub>2</sub> is slightly toxic at high concentrations. Liquefied gases may be extremely cold and freeze skin when contacted.	Stay upwind, evacuate if ordered. Move out of the path of the release. Never move toward the site of an accident to observe.
Nuisance Odors	Asphalt fumes, decaying vegetation, diesel exhaust, sewage, used motor oil, meat rendering, and many other substances and processes may produce odors.	Many odors are harmless, but some people have difficulty in identifying the source of common odors. Many odors may make people feel nauseous and may even cause vomiting at concentrations far below toxic levels.	Don't take chances. If you think there is an unusual odor, investigate further or move away. If you believe an emergency exists, report the odor by calling 911. Remember to check indoor gas appliances, sewer connections and other sources.

## Section 4: Hazardous Materials Incident

---

**Table 4-2: Potential Hazardous Materials Release Scenarios (continued)**

Type of Release	Examples	Description	Precautions
Transportation Accidents	Commercial traffic and pipelines.	Most chemicals in CIP are transported and may be involved in an accident in route. Accidents may block escape routes.	Be prepared to shelter-in-place, or move away from the hazard. Stay upwind. Do not approach a hazardous materials spill unless you are properly trained and equipped.
Radioactive Materials	Waste products, radiography equipment, certain gauges and meters.	Radioactive materials are usually tightly sealed and controlled. They are sometimes involved in transportation accidents, but usually pose no hazard beyond 50 to 100 feet distance. Particles may be carried in the smoke from a fire involving radioactive materials. Outdoor exposures at harmful concentrations are very rare.	Stay away from accident sites where radioactive materials are present. Seek assistance from trained emergency response personnel. If you believe you have been exposed, seek medical assistance or advice from an emergency response agency listed in the back of this Guidebook.
Chemical Mixtures	Any chemicals may react with certain incompatible materials.	May create a violent reaction, fire, explosion or toxic material. May react violently with other chemicals. Even household chemicals can create a hazard when inappropriately mixed.	Stay upwind. If you believe you have been exposed, seek medical assistance immediately. Try to identify the compound or trade name. For direct contact, remove clothing and flush skin/eyes for at least 15 minutes.

## **5. Emergency Action Checklists**

---

This section of the Guide provides quick reference checklists for preparation, response and recovery. The information provided is intended to be used for training and for reference when preparing your own emergency response plans.

## **5.1 HazMat Checklist**

Incidents involving hazardous materials may occur in the Campbell Industrial Park, on the surrounding roadways, in homes or businesses, or other locations where chemicals are used or stored.

# HAZARDOUS MATERIALS INCIDENT

## ✓ PREPARING FOR A HAZMAT INCIDENT

- ☐ Learn to detect the presence of a hazardous material. Many hazardous materials do not have a taste or an odor. Some materials can be detected because they cause physical reactions such as watering eyes or nausea. Some hazardous materials exist beneath the surface of the ground and can be recognized by an oil or foam-like appearance.
- ☐ Contact your Local Emergency Planning Committee or local emergency management office for information about hazardous materials and community response plans.
- ☐ Find out about evacuation plans for your workplace and your children's schools.
- ☐ Plan several evacuation routes out of the area.
- ☐ Ask about industry and community warning systems.
- ☐ Prepare and maintain an emergency survival kit. (The recommended kit is listed in [Section 5.7.1, Emergency Survival Kit.](#))
- ☐ Develop an emergency communications plan.
- ☐ In case family members are separated from one another during a hazardous materials accident, develop a plan for reuniting after the disaster. Ask an out-of-state relative or friend to serve as the "family contact." After a disaster, it's often easier to call long distance. Make sure everyone knows the name, address and phone number of the contact person.

## ✓ DURING A HAZMAT INCIDENT

- ☐ If you hear a siren or other warning signal, turn on a radio or television for further emergency information. *If instructed to remain indoors, refer to [the Shelter-in-Place Checklist on Page 5.1-4](#). If instructed to evacuate, refer to [the Evacuation Checklist on Page 5.1-5](#).*

- ☐ If caught at the scene of an accident:
  - Do not drive through smoke or clouds at the scene, they may contain hazardous chemicals.
  - Call 911 to report the nature and location of the accident as soon as possible.
  - Move away from the accident scene and help keep others away.
  - Do not walk into or touch any of the spilled substance.
  - Try not to inhale gases, fumes, and smoke. If possible, cover mouth with a cloth while leaving the area.
  - Stay away from accident victims until the hazardous material has been identified and authorities indicate that it is safe to go near victims. If it is safe:
    - Move victims to fresh air and call for emergency medical care.
    - Remove contaminated clothing and shoes and place them in a plastic bag.
    - Cleanse victims that have come in contact with chemicals by immediately pouring cold water over the skin or eyes for at least 15 minutes, unless authorities instruct you not to use water on the particular chemical involved.
  - Try to stay upstream, uphill, and upwind of the accident.

**✓ AFTER A HAZMAT INCIDENT**

- ☐ Return home only when authorities say it is safe.
- ☐ Follow local instructions concerning the safety of food and water.
- ☐ Clean up and dispose of residue carefully.
- ☐ Follow instructions from emergency officials concerning clean-up methods.

### 5.1.1 Shelter-in-Place

Shelter-in-place is a “remain indoors” option that will be exercised when an evacuation cannot be performed without exposing evacuees to the airborne chemical hazard. For short-term releases where the airborne cloud will move past the area quickly, the shelter-in-place techniques provide the most prudent course of action. Vulnerable populations may sustain more injury during evacuation than they would if they had stayed inside. Evacuations are also more time-consuming, and there may not be enough time for a safe evacuation.

If the emergency is a hazardous chemical release, make sure you’re inside and listen to the radio for instructions. The local authorities will instruct you to either evacuate or to perform shelter-in-place procedures.

Prior to a hazardous release, each business should evaluate if it has adequate facilities and/or space to shelter-in-place each employee. If not, arrangements should be made with a neighboring business so that employees may shelter-in-place there.

#### SHELTER-IN-PLACE CHECKLIST

- ☐ Prepare and maintain a Shelter-in-Place emergency kit.
- ☐ Close all doors to the outside and lock all windows.
- ☐ Seal gaps under doorways and windows with wet towels and those gaps around doorways and windows with duct tape.
- ☐ All ventilation systems should be set to 100% recirculation so that no outside air is drawn into the structure, or ventilation systems should be turned off.
- ☐ Turn off all heating systems and air conditioners.
- ☐ Seal any gaps around window-type air conditioners, bathroom exhaust fan grilles, range vents, dryer vents, etc., with tape and plastic sheeting, wax paper or aluminum wrap.
- ☐ Turn off and cover all exhaust fans in kitchens, bathrooms, and other spaces.
- ☐ Close all fireplace dampers.
- ☐ Close as many internal doors as possible.
- ☐ Go into one room and seal it off.
  - If any of this room’s walls are exterior walls, cover the electrical outlets with duct tape. If you must use the covered outlets, push the plug through the tape.
- ☐ If an outdoor explosion is possible, close drapes, curtains and shades over windows. Stay away from windows to prevent potential injury from flying glass.
- ☐ If you suspect that the gas or vapor has entered the structure you are in, hold a wet cloth over your nose and mouth.
- ☐ Keep your radio or television tuned to the EAS channel for additional information and the “All-Clear.”

- ☐ After the “All-Clear” is given, open up the shelter/house and turn on fans to clear area or any vapors that may have gotten in.

### **5.1.2 Evacuation**

Authorities will decide if evacuation is necessary based primarily on the type and amount of chemical released and how long it is expected to affect an area. Other considerations are the length of time it should take to evacuate the area, weather conditions, and the time of day.

#### **✓ EVACUATION CHECKLIST**

- ☐ Stay tuned to a radio or television for information on evacuation routes, temporary shelters, and procedures.
- ☐ Follow the routes recommended by the authorities—shortcuts may not be safe.
- ☐ If time permits, minimize contamination in the house by closing all windows, shutting all vents, and turning off attic fans.
- ☐ Take your emergency survival kit.
- ☐ Your pets will also need to evacuate, take them with you if it is safe to do so.
- ☐ Remember to help your neighbors who may require special assistance—infants, elderly people and people with disabilities.
- ☐ Leave the area as soon as possible.

## **5.2 Fire Checklist**

Fire in the Campbell Industrial Park could involve a wide range of hazardous and non-hazardous materials. Businesses in CIP include refineries with large quantities of flammable and combustible liquids. Pipelines run the length of CIP and carry flammable and combustible liquids along some of the major roads. Several businesses have large quantities of lumber, plastics and other materials that will readily burn if ignited. A fire in CIP may involve a heavy smoke plume that may travel for miles.

The immediate concerns of emergency response personnel in the event of a fire would be the proximity of the fire to stored hazardous materials and to occupied buildings. Spacing of businesses in CIP is generally good and adequate to prevent a widespread conflagration if the fire involves only ordinary combustible materials. Many buildings in CIP have wood-frame and ordinary construction. Some buildings are masonry construction, and a few buildings have sprinkler systems.

Refer to the following checklists for preparing for and responding to a fire.

✓ **PREPARING FOR A FIRE**

- ☐ Know the locations of emergency exits, fire alarms and fire extinguishers.
- ☐ Learn the types of extinguishers and their effectiveness on different types of fires. Teach everyone how to use them.
  - Class “A” fires occur in ordinary combustibles, such as paper or wood. Water or special dry chemicals are effective in extinguishing.
  - Class “B” fires include combustible and flammable liquids. Dry chemical or carbon dioxide extinguishers are effective. Water fog may also be used.
  - Class “C” fires are electrical fires. Carbon dioxide extinguisher are effective. Never apply water to an electrical fire.
- ☐ Install smoke detectors. At least one smoke detector should be installed on every level of a structure. Smoke detectors more than double the chance of surviving a fire. Smoke detectors sense abnormal amounts of smoke or invisible combustion gases in the air, and they can detect both smoldering and burning fires
- ☐ Check smoke detectors once a month and change the batteries at least once per year.
- ☐ Develop and practice an escape plan.
  - Draw a floor plan with at least two ways of escaping every room.
  - Keep a bell and a flashlight in each bedroom.
  - During real fire, the amount of smoke generated by a fire will most likely make it impossible to see. Plan your escape route carefully.
  - Practice staying low to the ground when escaping.
  - Learn to stop, drop to the ground, and roll if clothes catch fire.
- ☐ Choose a safe meeting place outside the house or building so that it can be determined who might be trapped inside.
- ☐ Post emergency numbers near telephones. However, be aware that if a fire threatens your location, you should not place the call to your emergency services from inside the building. It is better to get out first and place the call from somewhere else.

- ☐ Check the buildings electrical wiring to make sure that it is safe. Replace any wiring that is frayed or cracked. Make sure that wiring is not under rugs, over nails, or in high traffic areas.
- ☐ Make sure that hazardous materials are stored in approved containers and that usage and storage are in compliance with applicable fire codes.
- ☐ Don't overload outlets or extension cords.
- ☐ Outlets should have cover plates and no exposed wiring.
- ☐ Only purchase appliances and electrical devices that have a label indicating that they have been inspected by a testing laboratory such as Underwriter's Laboratories (UL) or Factory Mutual (FM).
- ☐ For upstairs bedrooms, purchase collapsible ladders at hardware stores, install them, and practice using them.
- ☐ Do not store combustible materials in closed areas or near a heat source.
- ☐ Use portable heaters only in well-ventilated rooms.
- ☐ Use solvents and flammables outdoors.
- ☐ Have combustion equipment periodically cleaned.
- ☐ Be aware of activities around you. Report any suspicious behavior.

### **DURING A FIRE**

- ☐ If you hear an alarm, follow the instructions given if any are provided.
- ☐ Call 911 immediately, if possible, or as soon as possible from a safe location outside of the burning building.
- ☐ If indoors, evacuate the building. Warn others in the building and in nearby buildings to evacuate.
- ☐ Get out as quickly and as safely as possible.
- ☐ Use the stairs to escape; do not use an elevator.
- ☐ When evacuating, stay low to the ground.
- ☐ If possible, cover mouth with a cloth to avoid inhaling smoke and gases.
- ☐ Close doors in each room after escaping to delay the spread of the fire.
- ☐ If your clothes catch fire, stop, drop to the ground, and roll to extinguish the flames.
- ☐ Feel all doors for heat before opening them. If the door is hot, do not open it and find another way out.
- ☐ If the door is closed and smoke is pouring in around the bottom of the door, keep the door closed. Seal cracks around doors with wetted towels, mattresses, pillows, etc. If it is safe to open a window, attempt to escape or signal for help with a pillowcase or other object and await rescue. Be ready to close the window if smoke begins to enter.
- ☐ If there is no smoke at the bottom or top and the door is not hot, then open the door slowly. If there is too much smoke or fire in the hall, slam the door shut.

## Section 5.2: Fire Checklist

---

- ☐ If a fire starts while you're cooking, put a lid over the burning pan. Be careful. Moving the pan can cause the fire to spread. Never pour water on a grease fire.

### ✓ AFTER A FIRE

- ☐ Give first aid where appropriate.
- ☐ Seriously injured or burned victims should be transported immediately to a hospital.
- ☐ Stay out of damaged buildings.
- ☐ Return home only when local fire authorities say it is safe.
- ☐ Look for structural damage.
- ☐ Discard food that has been exposed to heat, smoke, or soot.
- ☐ Contact your insurance agent.
- ☐ Don't discard damaged goods until after an inventory has been taken.
- ☐ Save receipts for money spent to replace things lost in the fire.

Refer to [Section 5.1, HazMat Checklist](#), for information on flammable gas or liquid releases.

### **5.3 Hurricane Checklist**

Hurricanes are tropical cyclones with winds reaching sustained speeds of 74 miles per hour or more and blowing around a relatively calm center, the “eye” of the hurricane. Hurricanes begin as relatively small tropical cyclones that drift gradually to the west-northwest. Under certain conditions and as they move away from the equator, these cyclones can increase in size, speed, and intensity until they become full-fledged hurricanes. Hurricanes combine violent winds, torrential rains, and abnormally high waves and storm tides. Heavy and prolonged hurricane rains falling over the hillsides can cause landslides and severe flash flooding. Large ocean swells moving out ahead of the hurricane may begin to reach the shores while the storm itself is still hundreds of miles away. As the hurricane nears the coastline, the storm tides and the high wind-driven waves can inundate coastal areas, erode beaches, pound and undermine waterfront structures, highways and other facilities. Refer to [Map 5-1](#) for the hurricane flood zones and follow the steps below prior to, during and after a hurricane.

# HURRICANE

## ✓ HURRICANE SEASON PREPARATION

*(Hurricane season runs from June through November.)*

- ☐ Learn the elevation and the flooding and wind damage history of your area.
- ☐ If you live or work near the flood zone, learn safe transportation routes inland. (Refer to [Map 5-1, Hurricane Flood Zones](#).)
- ☐ Learn the location of official shelters or make arrangements with friends or relatives inland to stay with them until the storm has passed.
- ☐ Determine where to move your boat in an emergency.
- ☐ Trim back dead or weak branches from trees.
- ☐ Secure any loose rain gutters and down spouts.
- ☐ Protect your windows. Install storm shutters over windows, glass doors and other openings. Alternately, stock tape and plywood panels to cover glass. Use ½ inch plywood cut to fit each window. Remember to mark which board fits which window. Pre-drill holes every 18 inches for screws.
- ☐ Replace the regular glass in windows and doors with impact-resistant glass.
- ☐ Buy hurricane and flood insurance. Homeowners policies do not cover damage from the flooding that accompanies a hurricane.
- ☐ Make an itemized list of all your property.
- ☐ Prepare and maintain an emergency survival kit. (The recommended kit is listed in [Section 5.7.1, Emergency Survival Kit](#).)
- ☐ If you are a pet owner, refer to the [Emergency Preparedness Instructions for Pet Owners, in Section 5.7.8](#).
- ☐ Identify the location of gas valves, circuit breakers, fire extinguishers, and water valves. Know how to operate them in the event of an emergency.
- ☐ Have a plan for getting family members back together in the event members are separated from one another during a disaster.
- ☐ Ask an out-of-state relative or friend to serve as the “family contact.” After a disaster, it’s often easier to call long distance. Make sure everyone in the family knows the name, address, and phone number of the contact person.

**✓ HURRICANE WATCH CHECKLIST**

*(A hurricane WATCH is declared if there is a threat of hurricane conditions within 36 hours.)*

- ☐ Listen for the National Weather Service (NWS) bulletins and Civil Defense messages on the local radio, TV stations, and the National Oceanic and Atmospheric (NOAA) Weather Radio.
- ☐ Notify and assist family, friends and neighbors, especially elderly or disabled.
- ☐ Fuel your vehicle.
- ☐ Moor small craft securely or move it to safe shelter. Use rope or chain to secure the boat to its trailer. Use tie-downs to anchor the trailer to the ground or house.
- ☐ Verify that your emergency survival kit is complete.
- ☐ Bring in or secure outdoor objects, such as lawn furniture, toys, garden tools, garbage cans and other loose material.
- ☐ Tape, board, or shutter windows to prevent them from shattering.
- ☐ Remove outside antennas.
- ☐ Wedge sliding glass doors at the top to prevent the lifting from their tracks.
- ☐ Back up your car against the inside of the garage door to help it resist strong winds.
- ☐ Unplug any unnecessary appliances.
- ☐ Turn your refrigerator and freezer to the coldest settings. Only open them when absolutely necessary and close them quickly.
- ☐ Review your evacuation plan.

**HURRICANE WATCH CHECKLIST FOR BUSINESSES**

- ☐ Notify the individual in charge.
- ☐ Provide alerting information to employees, guest, vendors, passengers, etc.
- ☐ Conduct discussions with key personnel.
  - Review plans and checklists.
  - Reaffirm individual and organizational responsibilities.
- ☐ Determine the availability and status of emergency equipment and supplies:
  - Backup generator(s)
  - Tie-down ropes
  - First aid kits
  - Window boarding materials
  - Water and food
  - Flashlights and extra batteries
  - Bedding and blankets
  - Masking tape
  - Tools

### Section 5.3: Hurricane Checklist

---

- ☐ Consider decisions to be made if a WARNING is issued and/or evacuation is advised.
- ☐ Determine if the business should be closed or remain open.
  - Close or move operations to a more suitably constructed/located building if the facility is in the hurricane flood zone or if is not a multiple-story building of heavy concrete and/or steel construction located at least 300 feet from the shoreline.
    - Determine where and how you or those responsible for will seek shelter and how you/they will get there.
  - Remain open if you consider your facilities to be survivable and you are responsible for the safety and well-being of others, or are providing emergency essential services to response and recovery operations. Make sure a sufficient number of employees and supplies will be available to accomplish all essential services and requirements.
  - Excuse employees so that they have sufficient time to prepare their families for evacuation and their homes prior to the hazard.
  - Begin employee excusals no earlier than when a WATCH is issued but not later than a WARNING.
  - Excusal recommendations will generally be made by the OCDA over the radio and TV.
- ☐ Prepare the facilities:
  - Board up or tape windows or protect them with storm shutters.
  - Brace sliding glass doors.
  - Attempt to shore up any on-going construction.
  - Relocate, store, or tie down equipment and loose items, inside and out.
  - Relocate important records, cash receipts, stockage, and supplies to safe areas.
  - Safeguard hazardous materials.
  - Do not drain swimming pools.
  - Turn refrigerators and freezers to the coldest settings.
  - Prior to evacuating, turn off all water, gas, and electric circuits except for freezers and refrigerators.
  - Institute your business' flood emergency plan to secure flammable liquids and hazardous materials
- ☐ Transportation
  - Taxi, tour bus, airport, and delivery truck drivers:
    - Establish priorities in coordination with customers, airport, hotels and the Civil Defense Agency
      - \* Elderly and disabled needs
      - \* Medical equipment and supplies
      - \* Food and water
      - \* Evacuation transportation

- \* Other survival supplies
- \* Petroleum supplies
- Plan to phase down operations so that vehicles are fueled and stored in safe locations prior to the expected arrival of sustained 40 MPH winds, damaging surf, and/or flooding.
- Aircraft:
  - Disperse to airports outside of the danger zone. Move into an available hangar space or tie down aircraft securely.
  - Check with the State Department of Transportation Airport Administrator
- Boats and Ships:
  - Small, trailered boats should be stored in warehouses or garages, If left outside, remove from trailers, place on the ground, lash down securely, and partially fill with fresh water.
  - Wet-stored boats should seek refuge in protected harbors, inlets, canals, etc. Reinforce all moorings. Be aware that boat owners can be held responsible for damages caused by their vessels to other people or property.
  - Commercial vessels should check with the Captain of the Port, 14<sup>th</sup> U.S. Coast Guard District, Honolulu, for guidance and direction.
- ☐ If the business is remaining open:
  - Perform facility preparation actions listed earlier.
  - Identify responsible people to:
    - Direct and allocate employees, guests, and passengers to safe areas.
    - Account for all employees, guests and passengers.
    - Maintain order and surveillance of evacuated areas.
    - Care for employees, guests, and passengers.
    - Obtain food, water and bedding.
    - Provide security for personal effects.
    - Assist the elderly and disabled, taking into consideration special medications and diets.
    - Provide translation to non-English speaking people.
  - Ensure that there is sufficient personnel available to maintain essential operations.
  - Handle media inquiries and customer complaints.
  - Keep guests and employees informed of the situation.
  - Determine the impact of delayed departures, arrivals, and deliveries and coordinate the scheduling and rescheduling.
  - Monitor and maintain radio nets and telephone service.
    - Consider using a messenger during power outages.
    - Control and minimize outgoing telephone calls.
    - Maintain contact with the Civil Defense Agency.

### Section 5.3: Hurricane Checklist

---

- ☐ If closing and/or evacuating:
  - Advise all employees, guests, and passengers of the decision.
  - Accomplish the facility preparation actions listed earlier.
  - Provide transportation for employees, guests, passengers, and their belongings, as required.
  - Provide Emergency Survival Kits for each evacuee. (Recommended kit contents are listed in [Section 5.7.1, Emergency Survival Kit](#).)
  - Arrange shelter for those whom you are responsible in multiple-story buildings constructed of heavy concrete and/or steel, at the third floor or above (at least 300 feet inland), or in other safe and suitable buildings of evacuation shelters.
  - Upon departing, turn off the gas and electricity at their main shut-offs, except for refrigerators and freezers.
- ☐ Review the WARNING Checklist.

#### **HURRICANE WARNING CHECKLIST**

*(A hurricane WARNING is issued when a dangerous storm surge, flooding and winds are expected in 24 hours or less.)*

- ☐ Stay tuned to the radio and TV stations for weather updates and Civil Defense Agency messages on school closures, employee excusal recommendations, and shelter opening schedules.
- ☐ If you are in a sturdy structure and away from coastal and rainfall flooding, consider staying.
  - Board up garages and porch doors.
  - Move valuables to upper floors.
  - Bring your pets indoors.
  - Fill containers, bathtubs, and washing machine with several days supply of drinking water.
  - Use the phone only for emergencies.
  - Stay indoors on the downwind side of the building, away from windows, skylights, and glass doors.
  - Avoid open flames, such as candles and kerosene lamps, as a source of light.
  - If power is lost, turn off major appliances to reduce power “surge” when electricity is restored.
  - Beware of the eye of the hurricane. Don’t be deceived by its calm and venture outdoors.
- ☐ If you are in a building that might be affected by storm tide or stream flooding, leave the area.
  - Evacuate early and in the daylight, if possible.
  - If time permits, shut off water and utilities at main stations.

- Take your emergency survival kit, small valuables, and important papers with you, but travel light. If time permits, move other valuables to a higher floor.
  - If you have pets, leave food and water for them or put them in a carrier and leave them in your car at the shelter location. Shelters will not permit them inside.
  - Secure the house or building by locking doors and windows.
  - Unplug appliances.
  - Drive carefully to the nearest designated shelter, using recommended evacuation routes. Avoid already flooded areas and do not drive where water is over the roads. Do not attempt to drive during a hurricane.
- ☐ If you live in a mobile home, check tie-downs and evacuate immediately.

**HURRICANE WARNING CHECKLIST ITEMS FOR BUSINESSES**

- ☐ Make the final decision to close or remain open.
- ☐ Advise employees, guests, and passengers of the WARNING and the intended course of action.
- ☐ Begin in-house relocation, if remaining open, or evacuation, if closing.
- ☐ Review the “All Clear” checklist.

**✓ THE “ALL CLEAR” CHECKLIST**

- ☐ Wait for the official “All Clear” announcement over the radio or television.
- ☐ Follow Civil Defense advisories/instructions and observe the curfew in effect.
- ☐ Drive carefully, watching for dangling power lines, undermined roads, and flooded low spots.
- ☐ Pay attention to the damaged areas:
  - Road closures and areas roped off for safety reasons
  - Power outages
- ☐ Assemble management team on/off-site, as required.
- ☐ Advise employees, guests, clients, vendors, passengers not to leave safe areas until:
  - Traveling can be safely accomplished.
  - Their destinations are determined to be safe.
  - If a business was closed, do not open it until the above conditions can be met.
- ☐ If business or house is within an evacuation zone and has sustained damage, as soon as conditions permit:
  - Exercise caution when re-entering the structure. Check for:
    - Structural damage
    - Electrical short circuits. Do not attempt to turn on any electrically operated lights or machinery until an electrician has checked your system.
    - Gas leaks
    - Hazardous Materials

### Section 5.3: Hurricane Checklist

---

- Broken water lines
- Food and water spoilage or contamination
- Determine the status of:
  - Water (operative and potable)
  - Electrical power
  - Communications
  - Fire protection system
  - Elevators
  - Vital records
- ☐ If damages have occurred:
  - Contact your insurance agent
  - Take pictures of the damage, if possible
  - Secure contractor support for:
    - Utility/fire protection system restoration
    - Debris clearance
    - Building repair
    - Handling/safeguarding of hazardous material on premises
- ☐ Identify and resolve life-threatening or potentially dangerous conditions/situations.
- ☐ Give first aid where needed and help any people that may be trapped. Do not move seriously injured people unless they are in immediate danger of further injury.
- ☐ Report broken or damaged water, sewer or electrical lines.
- ☐ Notify:
  - 911 for emergency assistance.
  - OCDA of damages sustained or assistance required.
  - American Red Cross of disaster relief needs.
  - Employees, guests, clients, vendors, passengers, and media of schedule for resumption of services.

**Hurricane Flood Zones**

- Worst Case
- Model Planning Case
- Firm Flood Hazard Area

**Note: Information provided by Oahu Civil Defense Agency.**

1000 0 1000 2000 Feet

## **5.4 Earthquake Checklist**

An earthquake is a sudden motion of the earth's surface, faulting, and ground failure. The general effects of an earthquake include structural damage to bridges, buildings, port and harbor facilities, airport facilities, utilities, and communications systems. In addition, an earthquake that registers between 6.0 and 8.0 on the Richter scale may be expected to result in additional natural/environmental disasters such as tsunamis, floods and landslides; industrial/technological emergencies, such as fires, explosions, and hazardous materials incidents; disruptions of vital services such as water, sewer, power, gas and transportation; damage to and disruption of emergency response facilities, resources and systems; civil and political emergencies such as looting, and damage to water impoundment structures.

The Island of Oahu is located in a zone that is predicted to have moderate earthquakes on a relatively frequent basis. It is not possible to accurately predict neither earthquakes nor their potential severity. Refer to the checklists below for emergency preparedness and response for earthquake hazards.

# Earthquake

## ✓ EARTHQUAKE PREPARATION

- ☐ Examine the structure for possible hazards and then correct them. Anything that can move, break or fall when the building starts to shake is a potential hazard.
  - Anchor tall bookcases and other top-heavy furniture to wall studs using metal angle braces (“L” brackets) and lag screws. Also, examine tall bookcases to determine how much will fall off the shelves. Be sure that all of the shelves are fastened.
  - Block the rollers of heavy equipment or other appliances to prevent them from moving.
  - Add bracing to support air conditioners, particularly on rooftops.
  - Put closed hooks on any hanging items. Also make sure that hanging items cannot hit a window if they begin to swing during the quake.
  - Replace any glass bottles with plastic containers.
  - Secure cabinet doors and drawers with latches that will prevent them from opening during an earthquake.
  - Anchor heavy pictures or wall hangings with wire-through-eye screws drilled into studs.
  - Locate desks away from windows.
  - Make sure that flammable liquids are stored away from heat sources and appliances.
  - Secure gas lines by installing flexible connectors to appliances.
  - Secure your hot water heater by fastening it to the wood studs of the nearest wall with thin metal straps (plumber’s tape).
  - Make sure that the roof has solid sheathing. If not, consider adding a plywood shield to ceiling joists.
  - Make sure that all roof tiles are secured.
  - Check the building foundation for loose or cracked plaster. Make sure the building is bolted to its foundation.
  - Sheath foundation “cripple walls” with plywood to prevent collapse.
  - Strengthen connections between posts and beams with metal T-straps.
  - Keep breakables, heavy objects; flammable or hazardous liquids in secured cabinets or on lower shelves.
- ☐ Practice earthquake drills to help everyone in your house or business to prepare and remember what to do if an earthquake occurs. Also, hold surprise drills.

- ☐ Identify the location of gas valves, circuit breakers, fire extinguishers, and water valves. Know how to operate them in the event of an emergency.
- ☐ Know the safest places in each room of your home or workplace.
- ☐ Prepare an emergency survival kit of food, water and supplies. (Recommended kit is listed in [Section 5.7.1, Emergency Survival Kit.](#))
- ☐ Keep up to date with you and your family's immunizations.
- ☐ Store valuable documents and valuables in a fireproof safe or a in security deposit box.
- ☐ Decide how and where your family will reunite if separated during the quake.
- ☐ Choose an out-of-state friend or relative that separated family members can call after the quake to report their whereabouts and condition.
- ☐ Learn first aid and CPR (cardiopulmonary resuscitation) from your local Red Cross chapter or other community organization.
- ☐ Keep bicycles in good condition.

### **DURING AN EARTHQUAKE**

- ☐ If indoors, stay there and do not run outside. Injury statistics show that people moving as little as 10 feet during an earthquake's shaking are most likely to be injured. Also pick safe places, in your home, school and other buildings you are frequently in. Take refuge by: 1) standing or crouching in a strong, supported hallway, 2) getting under a sturdy desk, table or other heavy object, or 3) bracing yourself in an inside corner of the building.
- ☐ Stay away from windows and other glass that might shatter.
- ☐ Stay away from bookcases, cabinets, or other objects that may topple or slide.
- ☐ Do not stand under any suspended objects, such as ceiling light fixtures, that may fall.
- ☐ Stay away from heating units, stoves, fireplaces, and areas where bricks might fall from the chimney.
- ☐ Stay clear of spaces that could be blocked by falling debris.
- ☐ If in a multiple story building, stay away from windows and outside walls. Do not use elevators.
- ☐ If outdoors, move to any open area, away from anything that could fall, such as trees, poles, power lines or buildings.
- ☐ If driving a vehicle, pull to a safe location and remain in the car until the shaking has stopped. Avoid parking near or under power lines, buildings, overpasses or other objects that may collapse. When the quaking has stopped, proceed cautiously, avoiding bridges and other elevated structures which might have been damaged or could be further damaged by aftershocks.
- ☐ If in a crowded place, do not rush for the doors. Crouch and cover your head with your hands and arms.

## Section 5.4: Earthquake Checklist

---

- ☐ If you are in a wheelchair, stay in it. Move for cover under a hallway or small room, lock the wheels and protect your head.

### ✓ AFTER AN EARTHQUAKE

- ☐ Prepare to be self-sufficient for at least three days, living without running water, electricity and/or gas, telephones and assistance from safety services.
- ☐ Examine your surroundings to identify any immediate hazards. Evacuate the building if there is potential for collapse.
- ☐ Check for gas and water leaks, broken electrical wiring or sewage lines. If there is damage, turn the utility off at the source. Immediately report gas leaks to your utility company and do not use candles, open flame or flares. Check for downed power lines.
- ☐ Check for injuries and render first aid and/or notify the local emergency or medical services as soon as possible. Do not attempt to move those who are seriously injured unless they are in immediate danger.
- ☐ If there is damage to the streets, stay where you are and report your location to the dispatcher by radio if possible.
- ☐ Be prepared for aftershocks. Remain in a safe location.
- ☐ Do not use the telephone unless it is absolutely necessary, e.g., a serious injury or fire. Phone lines will be jammed with emergency calls.
- ☐ Begin to identify available shelter and provisions if you are going to be isolated for a some time.
- ☐ Turn on your portable radio for instructions and news reports. For your own safety, cooperate fully with public officials and safety instructions.
- ☐ Do not use your vehicle unless there is an emergency. Keep the streets clear for emergency vehicles.
- ☐ If you evacuate, leave a message at your home telling family members and others where you can be found.

## **5.5 Tsunami Checklist**

A tsunami is a series of traveling ocean waves generated by disturbances associated with earthquakes, landslides or volcanism in oceanic and coastal regions. These waves may continue to arrive for several hours and are capable of causing destruction in coastal areas of Oahu. Generally, all coastal areas of Oahu are vulnerable. A tsunami greater than one meter may be expected to result in additional emergencies such as fires, explosions and hazardous materials incidents. A tsunami may also result in the disruption of utility services and damage to emergency response facilities and transportation routes. Civil and political emergencies such as looting may also occur.

The following is a list of tsunami WATCHES and WARNINGS:

- ☐ **Local Earthquake** - An earthquake that causes you to fall or hold on to something to keep from falling, is a natural Tsunami WARNING. Initially, protect yourself from the earthquake effects. When the shaking stops, people in evacuation zones should leave immediately.
- ☐ **Urgent Tsunami WARNING** - If a significant earthquake occurs in the vicinity of the Hawaiian Islands, the Pacific Tsunami Warning Center (PTWC) will issue an Urgent Tsunami WARNING for those islands which could be affected by tsunami. The WARNING will be announced over radio through the Emergency Alert System (EAS) in conjunction with the sounding of Civil Defense sirens. If an Urgent Tsunami WARNING specifically identifies Oahu, leave all designated evacuation zones immediately.
- ☐ **Tsunami WARNING** - A tsunami approach has been confirmed. The WARNING will be announced over the radio through the EAS in conjunction with the sounding of Civil Defense sirens. Monitor the radio and be prepared to evacuate when advised or ordered by the OCDA.
- ☐ **Tsunami Evacuation** - Civil Defense sirens will sound. Turn on radio. Those who are in tsunami evacuation zones must begin evacuation when the evacuation advisory/order is issued by the Oahu Civil Defense Agency (usually 3 to 4 hours prior to wave arrival). City buses will leave evacuation zones, and roads will be sealed off by police no later than 45 minutes prior to first wave arrival.
- ☐ **Tsunami WATCH** - In the event of a significant earthquake in distant areas of the Pacific Basin, i.e., the Aleutians, Alaska, South America, etc., the PTWC will issue a Tsunami WATCH until a tsunami can be confirmed or discounted.

Refer to [Map 5-2 for the tsunami flood zone](#).

# TSUNAMI

## ✓ TSUNAMI PREPARATION

- ☐ Know if your house or business is within or outside a tsunami flood zone. (Refer to [Map 5-2 for the tsunami flood zone.](#))
- ☐ If you are within the tsunami evacuation zone, know the safe transportation routes inland.
- ☐ Identify the location of gas valves, circuit breakers, fire extinguishers, and water valves. Know how to operate them in the event of an emergency.
- ☐ Prepare and maintain an emergency survival kit. (The recommended kit is listed in [Section 5.7.1, Emergency Survival Kit.](#))
- ☐ If you are a pet owner, refer to the [Emergency Preparedness Instructions for Pet Owners, Section 5.7.8.](#)

## ✓ TSUNAMI WATCH CHECKLIST

- ☐ All WATCH advisories are your signal to prepare. Monitor the radio broadcasts for the upgrade of a WATCH to WARNING status or WATCH cancellation.
- ☐ Begin a log of activity.
- ☐ Determine the time remaining to the estimated first wave arrival.
- ☐ Notify the individual in charge.
- ☐ Provide alerting information to employees, guests, clients, vendors, passengers, or family members.
- ☐ Establish an Information/Management Center, if possible.
- ☐ Conduct discussions with key personnel.
- ☐ Reaffirm individual/organizational responsibilities.
- ☐ Consider decisions to be made if a warning is issued.
- ☐ If the first wave will arrive in 6 hours or less and your business is:
  - Outside of an evacuation zone:
    - If closed, remain closed and so advise employees.
    - If open, remain open and retain employees, guests, clients, vendors, and/or passengers.
    - Terminate all non-emergency transport/travel.
    - Attempt to stagger the release of those who must leave.
  - Within an evacuation zone:
    - If closed, remain closed and so advise employees.

- If open, remain open and warn employees, guests, clients, vendors, and/or passengers.
- Implement pre-planned vertical/horizontal evacuation options.
- ☐ If the first wave is expected to arrive after 6 hours:
  - If closed, remain closed and so advise employees.
  - If open, establish a positive pace of pre-evacuation preparation.
  - Minimize movement of employees, guests, clients, passengers.
  - Time permitting; consider early closure, staggering employee release.
- ☐ Safety. Determine the responsible person to:
  - Care for employees, guests, clients, vendors, passengers.
  - Elderly/disabled considerations, e.g., special appliances, wheelchairs, medications required.
  - Determine impact of any on-going construction.
- ☐ If evacuation is required:
  - Relocate, store, or tie down equipment and loose items.
  - Handle/safeguard hazardous materials on premises.
  - Locate gas/electric shutoff.
- ☐ Security. Determine responsible person for:
  - Guiding/directing evacuation, if required.
  - Surveying evacuated areas, if possible.
  - Maintaining order in non-evacuated facilities.
  - Accounting for employees, guests, clients, vendors, passengers.
- ☐ Emergency Supplies/Equipment. Determine the responsible person for:
  - Backup generator(s)
  - Flashlights
  - Tie-down ropes
  - Portable radios
  - First aid kits
  - Extra batteries
  - Food
  - Water
  - Blankets/air mattresses
- ☐ Personnel. Determine responsible agent for:
  - Number/identification of minimum essential personnel to maintain operations.
  - Impact of employee departures and inability to travel to work.
- ☐ Transportation. Determine the responsible agent for:
  - Impact of delayed departures, arrivals, and deliveries.
  - Vehicle needs and availability.

## Section 5.5: Tsunami Checklist

---

- Filling gas tanks.
- Relocating vehicles outside of the evacuation zone.
- Boat and Ship Status:
  - Servicing and relocating boats to sea (minimum of one mile out) prior to wave arrival time, or to a safe inland location.
- Aircraft:
  - Relocating outside of the evacuation zone.
  - Protect auxiliary servicing and technical equipment.
  - Identify holding areas and facilities for arriving passengers and baggage.
- ☐ Protection of vital records (manual and computer). Determine the responsible agent for disposition of cash receipts, computer disks, personnel files, etc.
- ☐ Communications. Determine:
  - Radio/telephone status
  - Need for messengers during outages
  - How to minimize outgoing telephone calls
  - Response to media inquiries/client complaints
  - How to keep guests and employees informed of situation
- ☐ Management and staff should review WARNING Checklist.

### ✓ **Tsunami WARNING CHECKLIST**

- ☐ Civil Defense sirens will sound when a Tsunami WARNING is issued. Immediately turn on the radio for Civil Defense Agency instructions to evacuate. Obey all instructions given by Police, Fire and Civil Defense officials.
- ☐ Minimize outgoing telephone calls.
- ☐ If you are within an evacuation zone, leave by either walking, taking the bus or driving to a safe area or shelter outside the evacuation zone. Designated City buses will change from normal routing, operate as evacuation shuttles, and pick up evacuees in designated areas. Flag the buses down along their adjusted routes and they will take you, without charge, to within walking distance of one of the shelters. Use the shuttle buses to assist in your evacuation, but do not rely solely on their availability as accidents or unexpected delays could occur.
- ☐ If you are in a steel and/or concrete building of six or more stories move to the third floor or above and remain there until the "All Clear" is announced. This type of structure should provide adequate protection even if you are within the evacuation zone. Perform the following tasks:
  - Schedule gas and electricity turnoff prior to first wave arrival.
  - Ensure all employees, guests, clients, vendors or passengers are accounted for.
  - Await announcement of the "All Clear" over the radio and television.
  - Review the "All Clear" checklist.

- ☐ If you are outside the evacuation zones, you are not in danger. To avoid traffic gridlock, you should curtail non-essential travel, avoid roadways in or near the evacuation zones, and not interfere with the evacuation. Remain in safe areas until the "All Clear" is announced over radio.
- ☐ **Never go to the beach to watch for a tsunami wave. When you are that close, you will probably not escape the wave.**
- ☐ Parents should be familiar with their children's school's emergency plan. Schools and daycare centers located within evacuation zones will evacuate according to their plans. Public and certain private schools and daycare centers outside the evacuation zones will remain open and care for children until they can be safely picked up or released.
- ☐ Implement applicable portions of the guidance contained in the sample Tsunami WATCH Checklist.
- ☐ Inform employees, guests, clients, vendors, and/or passengers of the Tsunami WARNING and estimated time of first wave arrival.
- ☐ Secure evacuated facilities by locking them up.
- ☐ If departing an evacuation zone, turn off gas and electricity.

**✓ THE "ALL CLEAR" CHECKLIST**

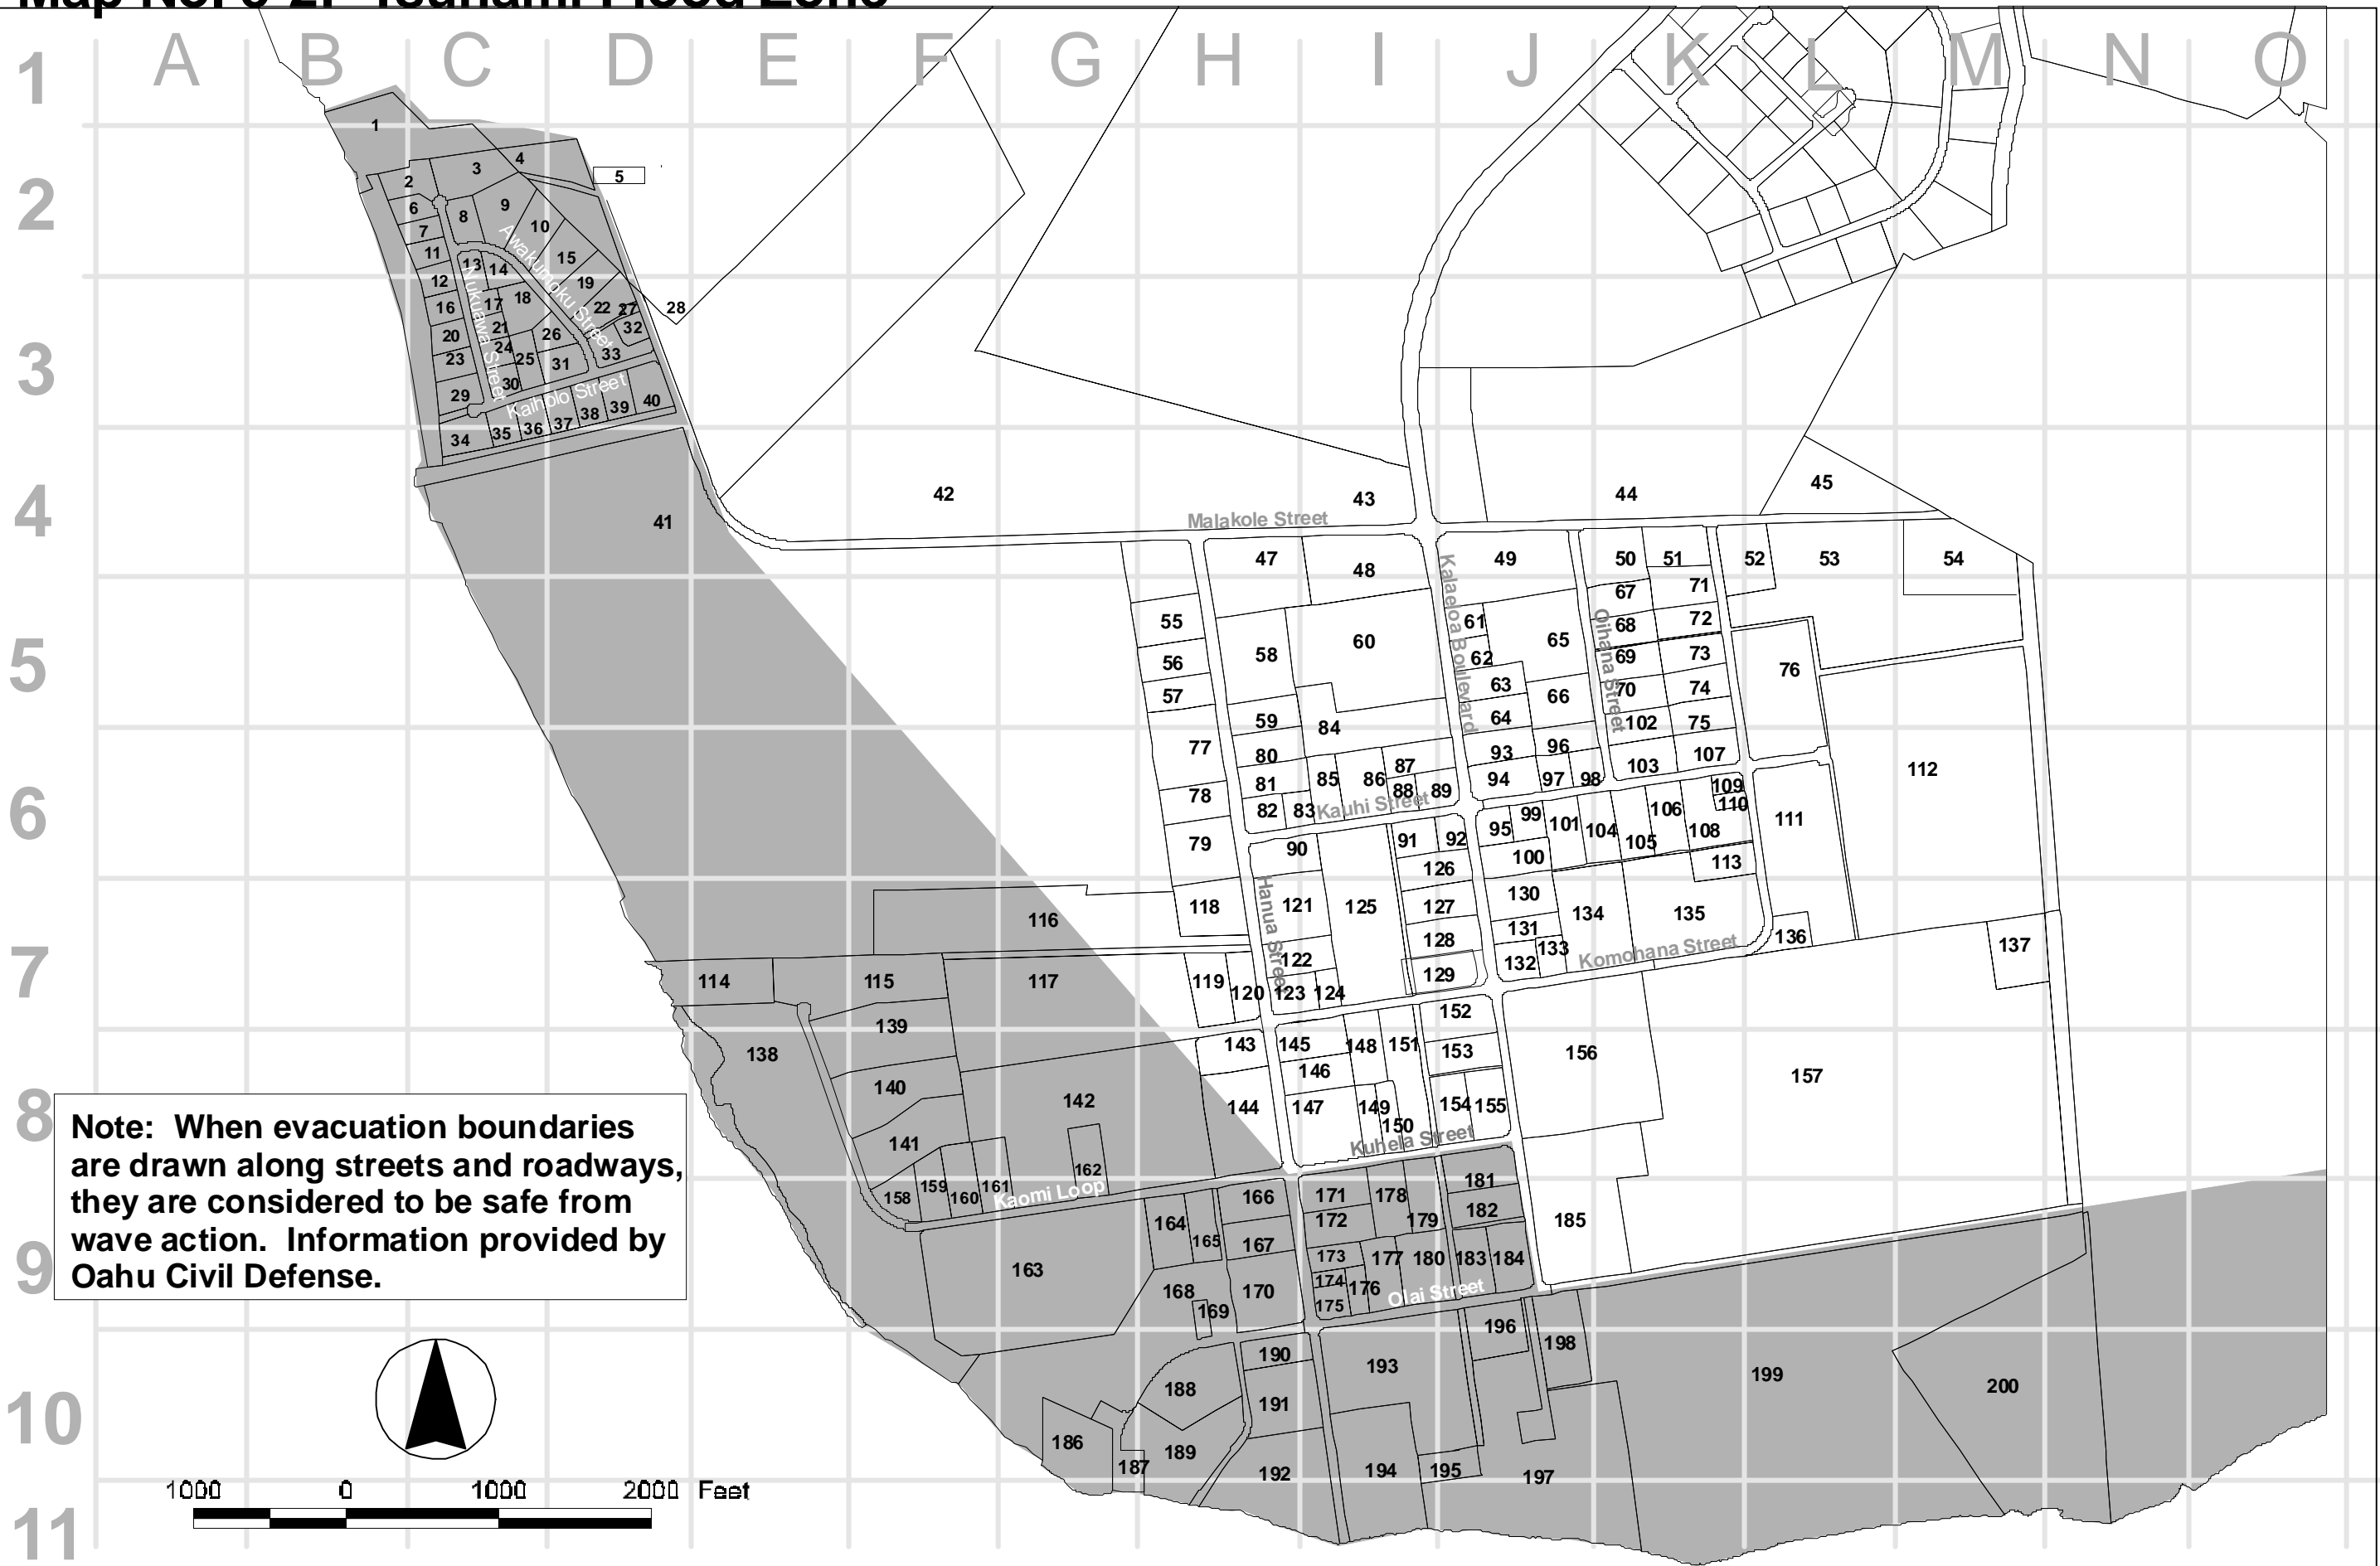

- ☐ Receive the "All Clear" over the radio or television.
  - ☐ Follow Civil Defense advisories and instructions.
  - ☐ Drive carefully, watching for dangling power lines, undermined roads, and flooded low spots.
  - ☐ Pay attention to the damaged areas:
    - Road closures.
    - Power outages.
    - Areas roped off for safety reasons.
- NOTE: Boaters should remain at sea until an "All Clear" is received from the Harbor Master, State Department of Transportation.
- ☐ Observe the curfew in effect.
  - ☐ Assemble management team on/off-site, as required.
  - ☐ Advise employees, guests, clients, vendors, passengers not to leave safe areas until:
    - Traveling can be safely accomplished.
    - Their destinations are determined to be safe.
    - If a business was closed, do not open it until the above conditions can be met.

## Section 5.5: Tsunami Checklist

---

- ☐ If business or house is within an evacuation zone and has sustained damage, as soon as conditions permit:
  - Exercise caution when re-entering the structure. Check for:
    - Structural damage.
    - Electrical short circuits. Do not attempt to turn on any electrically operated lights or machinery until an electrician has checked your system.
    - Gas leaks or other hazardous material spills.
    - Broken water lines.
    - Food and water spoilage or contamination.
  - Determine the status of:
    - Water (operative and potable)
    - Electrical power
    - Communications
    - Fire protection system
    - Elevators
    - Vital records
- ☐ If damages have occurred:
  - Contact insurance agent
  - Take pictures, if possible
  - Secure contractor support for:
    - Utility/fire protection system restoration.
    - Debris clearance.
    - Building repair.
    - Handling/safeguarding of hazardous material on premises.
- ☐ Identify and resolve life-threatening or potentially dangerous conditions/situations.
- ☐ Treat and care for injured.
- ☐ Report broken or damaged water, sewer or electrical lines.
- ☐ Notify:
  - 911 for assistance.
  - OCDA of damages sustained or assistance required.
  - American Red Cross of disaster relief needs.
  - Employees, guests, clients, vendors, passengers, and media of schedule for resumption of services.

## Map No. 5-2: Tsunami Flood Zone

## **5.6 Flooding Checklist**

Floods are the most common and widespread of all natural disasters except fire. In lowlands, coastal communities and other poorly drained areas, water from heavy localized rainfall and runoff may accumulate to depths of several feet. Whether the result of a tidal storm surge, hurricane, heavy thunderstorm or other natural disaster, the effects of flooding are most likely to cause the disruption of vital services such as water service, sewage, power, and gas service. Floods also cause damage to roadways, bridges, flood control structures (dikes, weirs), buildings, port and harbor facilities, railroad facilities, utilities and communications systems. Additional natural/environmental emergencies may also result because of flooding, e.g., landslides.

Keep in mind the following characteristics about floods:

1. Flood waters can be extremely dangerous. The force of six inches of swiftly moving water can knock people off their feet. The best protection during a flood is to leave the area and go to shelter on higher ground.
2. Flash flood waters move at very fast speeds and can roll boulders, tear out trees, destroy buildings, and obliterate bridges. Walls of water can reach heights of 10 to 20 feet and generally are accompanied by a deadly cargo of debris. The best response to any signs of flash flooding is to move immediately to higher ground. Flash floods usually result from intense storms dropping large amounts of rain within a brief period of time. Flash floods occur with little or no warning and can reach full peak in only a matter of minutes.
3. Cars can easily be swept away in just 2 feet of moving water. If flood waters rise around a car, abandon it immediately and climb to higher ground.

Refer to the following guidelines on how to prepare, survive, and deal with the aftermath of a flood.

# FLOOD

## ✓ PREPARING FOR A FLOOD

- ☐ Know the safest evacuation route from your house or business to high, safe ground.
- ☐ Prepare and maintain an emergency survival kit. (Recommended kit is listed in [Section 5.7.1, Emergency Survival Kit.](#))
- ☐ Determine the elevation of your surroundings above the flood stage elevation.
- ☐ If you reside or work in areas that are frequently flooded, keep sandbags, plywood, plastic sheeting, and lumber to protect property.
- ☐ Install check valves in building sewer traps to prevent floodwater from backing up in sewer drains.
- ☐ Identify the location of gas valves, circuit breakers, fire extinguishers, and water valves. Know how to operate them in the event of an emergency.
- ☐ Buy flood insurance. Homeowner's policies do not cover flood damage.
- ☐ Keep your insurance policies and a list of personal property in a safe place, such as a safety deposit box. Know the name and location of the insurance agents who issued your policies.
- ☐ If your business will be critically affected by a power failure, arrange for auxiliary electrical supplies.

## ✓ FLOOD WARNING CHECKLIST

- ☐ Stay tuned to a local radio station, the NOAA Weather Radio, or TV station and follow all emergency instructions.
- ☐ If time permits, there are a number of precautionary steps that can be taken:
  - Turn off all utilities at the main switch and close the main gas valve if evacuation appears necessary. Do not touch any electrical equipment unless it is in a dry area, or you are standing on a piece of dry wood wearing rubber soled shoes or boots and rubber gloves.
  - Move valuable papers, furs, jewelry, clothing, and other contents to upper floors or higher elevations.
  - Fill bathtubs, sinks, and jugs with clean water in case regular supplies are contaminated.

- Board up windows or protect them with storm shutters or tape to prevent flying glass.
- Bring outdoor possessions inside or tie them down securely. This includes lawn furniture, garbage cans, tools, signs, and other moveable objects that might be swept away or hurled about.
- Open basement windows to equalize water pressure on the foundations and walls.
- ☐ Fuel your automobile since gasoline pumps will not be working if the electricity is cut off.
- ☐ If it is safe to evacuate by car, leave early before access is cut off by flood water, and take your emergency survival kit with you.
- ☐ If you're caught in a house or building by suddenly rising waters, move to the second floor and, if necessary, to the roof. Take warm clothing, a flashlight, and a portable radio with you. Then wait for help. Do not try to swim to safety; rescue teams will be looking for you.
- ☐ When outside, try to avoid flooded areas, and don't attempt to wade through floodwater that is moving rapidly or is more than knee deep high.
- ☐ Do not drive where water covers the road. Parts of the road may already be washed out or the water can be deeper than it appears.
- ☐ If your car stalls in a flooded area, abandon it as soon as possible and move to higher ground. Floodwaters can rise rapidly and sweep a car away.

### **AFTER THE FLOOD**

- ☐ If your home or business has suffered flood damage, immediately call the insurance agent or broker who services your flood insurance policy. The agent will then submit a loss form to the National Flood Insurance Program. An adjuster will be assigned to inspect your property as soon as possible.
- ☐ Prior to entering a building, check for structural damage. Make sure it is not in danger of collapsing. If there is standing water next to the outside wall of the building, do not go in.
- ☐ Check for hazardous materials spills.
- ☐ Turn off any outside gas lines at the meter or tank, and let the house air for several minutes by opening doors to help remove foul odors or escaping gas. It will also help dry out the building.
- ☐ Upon entering the building, do not use open flame as a source of light since gas may still be trapped inside; a battery-operated flashlight is ideal.
- ☐ Look for electrical shorts or live wires before making certain that the main power switch is turned off. Do not turn on any lights or appliances until an electrician has checked the system for short circuits.
- ☐ Cover broken windows and holes in the roof or walls to prevent further weather damage. The expense of these temporary repairs is usually covered under your flood

## Section 5.6: Flooding Checklist

---

insurance policy (subject to the policy deductible). Therefore, it is important to save receipts.

- ☐ Proceed with immediate cleanup measures to prevent any health hazards. Perishable items which pose a health problem should be listed and photographed before discarding. Throw out fresh food and previously opened medicines that have come in contact with floodwater.
- ☐ Water for drinking and food preparation should be boiled vigorously for ten minutes (until the public water system has been declared safe).
- ☐ Refrigerators, sofas, and other hard goods should be hosed off and kept for the adjuster's inspection. A good deodorizer when cleaning major kitchen appliances is to add one teaspoon of baking soda to a quart of water. Any partially damaged items should be dried and aired; the adjuster will make recommendations as to their repair or disposal.
- ☐ Take pictures of the damage done to your building and contents.
- ☐ Take all wooden furniture outdoors, but keep it out of direct sunlight to prevent warping. A garage or carport is a good place for drying. Remove drawers and other moving parts as soon as possible, but do not pry open swollen drawers (or doors) from the front. Instead, remove the backing and push the drawers out.
- ☐ Shovel out mud while it is still moist to give walls and floors a chance to dry.
- ☐ Special attention should be paid to cleaning out heating and plumbing systems.
- ☐ Once plastered walls have dried, brush off loose dirt. Wash with a mild soap solution and rinse with clean water; always start at the bottom and work up. Ceilings should be done last.
- ☐ Mildew can be removed from dry wood with a solution of 4 to 6 teaspoons trisodium phosphate, one cup liquid chlorine bleach, and 1 gallon water.
- ☐ Clean metal at once then wipe with a kerosene-soaked cloth. A light coat of oil will prevent iron from rusting. Scour all utensils, and, if necessary, use fine steel wool on unpolished surfaces. Aluminum may be brightened by scrubbing with a solution of vinegar, cream of tartar, and hot water.
- ☐ Quickly separate all laundry items to avoid running colors. Clothing or household fabrics should be allowed to dry (slowly, away from direct heat) before brushing off loose dirt. If you cannot get to a professional cleaner, rinse the items in lukewarm water to remove lodged soil. Then wash in lukewarm, mild detergent; rinse and dry in sunlight.
- ☐ Flooded basements should be drained and cleaned as soon as possible. Remember, however, that structural damage can occur by pumping out the water too quickly. After the surrounding floodwaters have subsided, begin draining the basement in stages, about 1/3 of the water volume each day.
- ☐ Do not visit disaster areas; you may hamper rescue or other emergency operations.

## **5.7 Survival Kits and Other Information**

### **5.7.1 Emergency Survival Kit**

The recommended contents of an emergency survival kit are listed below. This kit includes the necessary items for most natural disasters that you will encounter, and it should be kept in a central location somewhere in your home. It is also recommended that you keep emergency supplies at work and in your car (refer to Section 5.7.2, Car Survival Kit).

- ☐ Flashlights, at least 2
- ☐ Portable, battery-operated radios, at least 2
- ☐ Extra batteries (for the flashlight, and to operate the radio for at least 24 hours)
- ☐ Candles
- ☐ Fire extinguishers, at least 2 of the A-B-C type
- ☐ Matches in a waterproof container
- ☐ Money
- ☐ Disposable plates, forks, spoons, and knives
- ☐ Other utensils e.g., cutting knives
- ☐ Disposable hot and cold cups
- ☐ Paper napkins or towels
- ☐ Eyeglasses, if needed
- ☐ First Aid Kit ([Section 5.7.3](#))
- ☐ Masking tape for windows and glass doors
- ☐ Water, five (5) gallons per each person (minimum 2 quarts/day/person for drinking purposes). ([Refer to Section 5.7.7, Maintaining a Safe Water Supply.](#))
- ☐ Five-day supply of non-perishable food.
- ☐ Non-electric can opener
- ☐ Heavy-duty aluminum foil
- ☐ Plastic garbage bags
- ☐ Zip-lock bags for food storage
- ☐ Sterno heater, hibachi or camp stove with a 5-day fuel supply
- ☐ Change of clothing for each person
- ☐ Sleeping bags/blankets/air mattresses and/or tent
- ☐ Prescription medications and copies of prescriptions
- ☐ Personal hygiene, toilet articles and sanitary supplies
- ☐ If you have an infant, diapers, diaper wipes, and baby food
- ☐ Ice chest
- ☐ Insect spray
- ☐ Leather work gloves and thick-soled shoes for each household member

## Section 5.7: Survival Kits and Other Information

---

- ☐ Dust masks or other generic respiratory filters for each household member
- ☐ Dust goggles or other generic eye protection for each household member
- ☐ If you have a pet, pet food and pet supplies. (See Section 5.7.5, Pet Survival Kit.)
- ☐ Shelter-in-Place Survival Kit (Section 5.7.4)
- ☐ Shovel and other useful tools, e.g., an adjustable pipe wrench for turning off the gas and water mains
- ☐ Rain gear

### 5.7.2 Car Survival Kit

This survival kit should be kept in your car just in case you cannot access your main emergency survival kit. Also, remember that it is a good idea to keep your automobile gasoline tank at least  $\frac{1}{2}$  to  $\frac{3}{4}$  full at all times.

- ☐ Flashlight
- ☐ First Aid Kit
- ☐ Shovel and tow chain
- ☐ Adjustable wrench
- ☐ Backpack containing jeans, sturdy shoes, a rough coat and/or rain gear
- ☐ Jumper cables
- ☐ 2-3 days supply of non-perishable food
- ☐ One gallon of water
- ☐ Manual can opener
- ☐ Hand knife or multipurpose pocket knife
- ☐ Matches in a water-proof container
- ☐ Maps of the areas most traveled
- ☐ Spare tire
- ☐ Traction mats or chains

### 5.7.3 First Aid Kit

- |  |  |
|--|--|
| <input type="checkbox"/> Adhesive tape, roll 2" wide                   | <input type="checkbox"/> Nose drops                    |
| <input type="checkbox"/> Cotton-tipped applicators                     | <input type="checkbox"/> Petroleum jelly               |
| <input type="checkbox"/> Antiseptic solution                           | <input type="checkbox"/> Rubbing alcohol               |
| <input type="checkbox"/> Medications, vitamins and mineral supplements | <input type="checkbox"/> Smelling salts                |
| <input type="checkbox"/> Aspirin or other pain reliever                | <input type="checkbox"/> Soap                          |
| <input type="checkbox"/> 2" and 4" wide roll bandages                  | <input type="checkbox"/> Scissors                      |
| <input type="checkbox"/> Plastic strip bandages in assorted sizes      | <input type="checkbox"/> 8 oz. table salt              |
|  | <input type="checkbox"/> Safety pins in assorted sizes |

- |  |  |
|--|--|
| <input type="checkbox"/> Cough medicine                  | <input type="checkbox"/> 4 oz. baking soda |
| <input type="checkbox"/> Diarrhea medication             | <input type="checkbox"/> Paper tissues     |
| <input type="checkbox"/> Ear drops                       | <input type="checkbox"/> Toothache remedy  |
| <input type="checkbox"/> Laxative                        | <input type="checkbox"/> Thermometer       |
| <input type="checkbox"/> Motion sickness tablets         | <input type="checkbox"/> Tweezers          |
| <input type="checkbox"/> Water purification materials    | <input type="checkbox"/> Latex gloves      |
| <input type="checkbox"/> One way ventilation kit for CPR |  |

**Caution: Take precautions against the hazards of bloodborne pathogens when administering first aid or CPR.**

#### **5.7.4 Shelter-in-Place Survival Kit**

The shelter-in-place survival kit should supplement your Emergency Survival Kit, which is listed above in [Section 5.7.1](#). The items contained in this kit may duplicate those in the Emergency Survival Kit, but only in instances where the quantities are different.

Typically, a shelter-in-place emergency will only last a few hours, rather than a series of days. These items should be stored in the pre-selected room of seclusion.

- ☐ Pre-cut and labeled plastic sheeting for the windows, vents, and other miscellaneous openings to the outside
- ☐ One 60-yard roll of duct tape
- ☐ 2-3 gallons of water and cups
- ☐ A few non-perishable food items
- ☐ Towels for sealing the bottom of doors
- ☐ If you have children, a game or some toys

#### **5.7.5 Pet Survival Kit**

- ☐ Pet carrier or cage
- ☐ Well-fitted collar, identification tag, and leash
- ☐ One-week's supply of dry-type pet food
- ☐ Non-spill food and water bowls
- ☐ Non-breakable water storage containers with three-day supply of water
- ☐ Newspaper
- ☐ Plastic bags
- ☐ Cleansers and disinfectants
- ☐ Paper towels
- ☐ Special medication, if needed

### 5.7.6 Tips for Emergency Food Storage and Eating

#### *Emergency Eating*

- ☐ Plan to eat at least one nutritious, well-balanced meal each day.
- ☐ Drink enough liquid to enable your body to function properly (two quarts a day).
- ☐ Eat enough food to keep your strength and energy up.
- ☐ Take vitamin and mineral supplements to ensure adequate nutrition.
- ☐ Choose foods your family likes.
- ☐ Use the perishable food in the refrigerator and freezer first.

#### *Food Storage*

- ☐ Buy foods that can be eaten with little or no cooking.
- ☐ Keep food in a cool, dry place - a dark area if possible.
- ☐ Close food boxes and cans tightly after use.
- ☐ Wrap bread, cookies, or crackers in plastic bags or keep them in tightly closed containers.
- ☐ Use plastic containers when storing food, and buy emergency food in cans.
- ☐ Transfer opened packages of sugar, dried fruits and nuts into screw-top jars or air-tight cans to protect them from pests.
- ☐ Inspect all food for signs of spoilage before using.
- ☐ Keep clean plastic containers on hand to store ½ gallon of water for each person per day.
- ☐ Have a special section of the food cupboard set aside for emergency food, so that it is easier to manage, and can be packed quickly if there is a need to evacuate.
- ☐ Rotate food every 6 months. When replacing them, date them with an ink marker. Place new items at the back of the storage area and older ones in front, so that the older items will be used first.

### 5.7.7 Maintaining a Safe Water Supply

Having an ample supply of clean water is a top priority in an emergency. It is used not only for drinking, but also for hygiene purposes and food preparation. Store at least two quarts, and up to one gallon per person per day. You should store at least a one- to two-week's supply for each person. If supplies run low, never ration water. Drink the amount you need today, and try to find more tomorrow. You can minimize the amount of water your body needs by reducing activity and staying cool.

### ***Storing Water***

Store your water in thoroughly washed plastic, glass, fiberglass or enamel-lined metal containers. Plastic containers such as soft drink bottles are best. You can also purchase food-grade plastic buckets or drums. Seal water containers tightly, label them, and store them in a cool, dark place. Rotate water every six months.

### ***Emergency Outdoor Water Sources***

If you need to find water outside, you can use these sources. Be sure to purify the water before drinking it.

- ◆ Rainwater
- ◆ Streams, rivers, and other moving bodies of water
- ◆ Ponds and lakes
- ◆ Natural springs

Avoid water with floating material, an odor or dark color. Use saltwater only if you distill it first. You should not drink flood water.

### ***Water Purification Methods***

- ☐ Boiling: Boil water vigorously for 1 to 3 minutes. To improve the taste, aerate water by pouring it from one clean container to another several times.
- ☐ Purification tablets: These are available at most drug stores. Follow the directions on the package carefully.
- ☐ Bleach purification: Liquid household bleach can be used to purify water. It **MUST** contain 5.24% sodium hypochlorite. Add the amount of bleach listed below, then stir. Let water stand 30 minutes before drinking. Do not use scented bleaches, colorsafe bleaches or bleaches with added cleaners. Powdered flavored beverage mix may be added to offset the chlorine taste.
  - For 1 gallon of water: If water is clear add 8 drops (1/8 teaspoon). If water is cloudy add 16 drops (1/4 teaspoon).
  - For 5 gallons of water: If water is clear add 1/2 teaspoon. If water is cloudy, add 1 teaspoon.
- ☐ Distillation: Distillation involves boiling water and then collecting the vapor that condenses back into water. This process eliminates salt and other impurities from the water. To distill, fill a pot halfway with water. Tie a cup to the handle on the pot's lid so that the cup will hang right-side-up when the lid is upside-down. Place the lid upside-down on the pot and make sure the cup is not dangling into the water. Boil the water for 20 minutes. The water that drips from the lid into the cup is distilled.

### 5.7.8 Emergency Preparedness Guidelines for Pet Owners

#### ✓ BEFORE A DISASTER

- ☐ Determine the safest place in your home for your pet during a disaster. The place you select should be away from windows and in an area that is easy to clean.
- ☐ If you live in a low-lying area that is likely to be evacuated during an emergency, make advance arrangements to stay with a friend or relative who lives on higher ground in a suitable structure and is able to accommodate your pet. Remember, pets are not allowed in evacuation shelters due to public health and safety reasons.
- ☐ Keep a pet carrier on hand for each pet. The carrier should be large enough to allow your pet to stand up and turn around while inside it. Take the time to familiarize your pet with the carrier.
- ☐ Be sure your pet has a properly fitted collar and an identification tag on at all times.
- ☐ Keep a leash on hand to maintain control of your pet should you need to leave your home with your pet during an emergency.
- ☐ Check with veterinary clinics or your local human society to locate boarding facilities. Visit the facilities beforehand to learn their requirements and determine if they meet your standards. Make sure the kennel has an emergency evacuation plan, and be sure it is out of the immediate hazard area.
- ☐ Keep your pet's vaccinations up-to-date and have the records handy. Many boarding facilities will require proof of current vaccinations.
- ☐ Keep a current photo of your pet to ensure identification if you are separated during an emergency.
- ☐ Prepare a Pet Survival Kit. ([Section 5.7.5](#))

#### ✓ DURING A DISASTER

- ☐ Bring your pets indoors well ahead of a natural disaster. Do not leave pets outside or tied up.
- ☐ Prepare an indoor area in which your pet can stay. A good place provides protection from breaking glass, wind and noise. Use a tiled area which is easy to clean, such as the bathroom or garage, and be sure your pet has access to a high place, such as counter tops, in case flooding occurs.
- ☐ Do not confine a dog and cat together, even if the two are normally friendly.
- ☐ Keep small pets, such as rabbits, mice and birds, away from dogs and cats.
- ☐ Leave difficult or aggressive animals in crates or cages to reduce the chance of the animals getting loose.
- ☐ Leave water for your pets in bathtubs or in sturdy containers that will not spill.
- ☐ Leave only dry-type foods to prevent overeating.
- ☐ Use special food dispensers for birds. They must eat daily to survive.

- ☐ If you are evacuating, it is advised that you take your pet with you. If you could not arrange sheltering for your pet elsewhere, as a last resort, your pet can stay in your car parked at the evacuation shelter. Keep your pet in its carrier, and provide food and water. Remember to leave a car window open slightly to provide ventilation and park in a protected, shady area.

### ✓ AFTER A DISASTER

- ☐ Be extra careful when letting your pet loose outdoors. Familiar scents and landmarks may have been altered causing your pet to become confused and possibly lost. Other dangers after a disaster could include downed power lines and debris created by strong winds or rain.
- ☐ Make sure your pet wears an identification tag.
  - ☐ If your pet becomes lost, call and visit the Humane Society as soon as possible.

## **5.8 Facility Security Checklist**

Security threats for businesses ranges from loss of property from theft or malicious acts to life safety of employees and the public. Today's news is filled with stories of workplace violence, robbery, theft and even terrorism. Basic security precautions may help in both reducing the likelihood of an incident and in reducing the severity of any loss. When reviewing facility security threats, businesses should consider the following:

1. Mail Security – Procedures may be needed to recognize and handle suspicious packages. Protection of valuables in both incoming and outgoing mail may also be a consideration.
2. Workplace Violence – Consider the conditions and behaviors that signal a risk of violence from employees, their family members and others who have access to your facility.
3. Physical Security – Some facilities should consider such measures as controlled access points, perimeter fencing and barriers, lighting, alarms, cameras and other security controls to reduce theft, protect operations and keep the public from entering hazardous areas.
4. Computer security – Methods of controlling computer access and protecting valuable data such as customer records, invoices, inventories, etc. should consider both internal and external threats.
5. Security from terrorist activities – Contingency plans for bomb threats, biological threats and other potential terrorist activities may be considered a necessary part of a facility security plan.

Refer to the guidelines that begin on the following page for information on reducing risks of loss from security incidents.

✓ **PREVENTION**

☐ Identify facility assets that may need protection:

- |                             |                        |
|-----------------------------|------------------------|
| ▪ Personnel                 | ▪ Inventories          |
| ▪ Buildings                 | ▪ Critical Utilities   |
| ▪ Hazardous Materials       | ▪ Computers and data   |
| ▪ Money                     | ▪ Accounts Receivable  |
| ▪ Fire and Security Systems | ▪ Employee possessions |
| ▪ Tools                     | ▪ Vehicles             |

☐ Consider potential threats and consequences of loss:

**Threats**

- Violence
- Sabotage
- Theft, including espionage
- Data loss
- Facility Damage
- Product Tampering
- Fraud or embezzlement
- Civil Unrest

**Consequences**

- Injury or death
- Fire/Explosion
- Loss of Customers or Assets
- Loss of Income
- Lost Production
- Loss of Consumer Confidence
- Loss of Stock Value
- Loss of Facilities or Infrastructure

- ☐ Conduct a facility threat assessment to determine your vulnerabilities.
- ☐ Develop a security plan to address threats.
- ☐ Install physical security precautions if warranted by the threat assessment.
- ☐ Keep backups of your critical documents, electronic data and trade secret information.

## ✓ **PHYSICAL SECURITY CHECKLIST**

- ☐ Consider facility vulnerabilities and apply appropriate safeguards:
  - Security fencing on perimeter.
  - Security lighting.
  - Guarded or locked entry.
  - Post signs in security areas.
  - Badge identification.
  - Separate entrances for public, contractors and employees.
  - Doors and windows secure.
  - Alarm systems.
  - Traffic barriers for critical facility protection.
  - Cameras to monitor remote or vital areas.
  - Protection of utilities.
  - Keep outdoor combustible materials storage away from exterior walls.
  - Keep storage areas locked.
  - Sign in and escort requirement for visitors.

## ✓ **MAIL SECURITY**

- ☐ What should make me suspect a piece of mail or package?
  - Is it unexpected or from someone you don't know?
  - Is it addressed to someone no longer at your address?
  - Is it handwritten and has no return address or bears one that you can't confirm is legitimate?
  - Is it lopsided or lumpy in appearance?
  - Is it sealed with excessive amounts of tape?
  - Is it marked with restrictive endorsements such as "Personal" or "Confidential?"
  - Does it have excessive postage?
  - Was it delivered by unknown persons or is found in an unusual place?
  - Was it left by a member of the public?
- ☐ What should I do with a suspicious piece of mail?
  - Don't handle a suspicious letter or package.
  - Don't shake it, bump it, or sniff it.
  - Wash hands thoroughly with soap and water.
  - Notify local law enforcement authorities.

### ✓ **COMPUTER AND DATA SECURITY**

- ☐ Limit access to critical data.
- ☐ Install 'firewalls' and virus software. Keep systems up to date.
- ☐ Restrict incoming email to company business.
- ☐ Restrict Internet access for non-business use.
- ☐ Consider offsite secure backup for critical information.
- ☐ Change passwords often.
- ☐ Limit access to network servers
- ☐ Shred waste that contains important company or personnel information.
- ☐ Ensure that duplicate records exist for time cards, invoices, inventory reports and other critical documents.

### ✓ **PERSONNEL SECURITY**

- ☐ Establish a security policy for hiring and termination practices.
- ☐ Establish rules prohibiting violent behavior of any kind.
- ☐ Prepare procedures for response to bomb threats and other security incidents.
- ☐ Prohibit guns on your property.
- ☐ Conduct pre-employment security checks.
- ☐ Limit former employees access to work areas.
- ☐ Require employees who have obtained restraining orders to notify their supervisor.
- ☐ Train supervisors to recognize and address threats and warnings of violence.

## 6. EMERGENCY RESOURCES GUIDE MAINTENANCE

---

This Emergency Resources Guide was prepared with information voluntarily provided by the industries within CIP and with the cooperation of the Oahu Civil Defense Agency, Honolulu Fire Department, Department of Health, and other organizations. The businesses within CIP occasionally change operations or ownership. New businesses continue to open as CIP develops. In order to keep the Emergency Resources Guide up-to-date, the continuing cooperation of businesses and agencies is needed. All businesses and agencies are encouraged to provide information when changes take place in their facility and to inform new businesses that information is needed from them to keep the Guide current.

### 6.1 Emergency Resources Guide Maintenance Program

The objective of the Emergency Resources Guide Maintenance Program is to help ensure that emergency contacts and phone numbers are updated on a frequent basis, and to periodically reassess emergency information for the Park. The types of changes that will affect the Emergency Resources Guide have been analyzed to help determine the updating requirements after a change has occurred. The Guide provides information that is immediately helpful to emergency response personnel in the [Emergency Resources Guide Directory found in Volume II, Section 5, Directory](#). This information is needed during emergencies to assist in assessment, communication, and evacuation. The Guide also provides much information that is useful during planning for an emergency. Significant changes to data contained in the Guide, such as changes to toxic substance inventories, and relocation of facilities are made annually – and more frequently if circumstances warrant.

### 6.2 Responsibilities

The CLEAN Emergency Resources Guide Coordinator is responsible for maintaining all information submitted by businesses or other interested parties for the purpose of updating or modifying the Guide. The Emergency Resources Guide Coordinator's duties include:

- ◆ Distributing and receiving Resident Modification and New Resident Forms. (See Figures [6-1](#), [6-2](#) and [6-3](#).)
- ◆ Maintaining contact with the LEPC, state and local response agencies and other interested parties to collect information and ideas for Guide improvements.
- ◆ Updating the Access database and distributing an updated Directory to the Fire Department on a monthly basis.
- ◆ Maintaining a file of potential significant changes to the Guide and providing quarterly status reports to the CLEAN Executive Committee as to the type and scope of proposed changes.
- ◆ Yearly updates may require assistance beyond the resources available to the Emergency Resources Guide Coordinator. The Emergency Resources Guide Coordinator should assess the scope of proposed changes and propose a cost, schedule and means of updating the Guide to the CLEAN Executive Committee at least three months prior to the annual update.
- ◆ Overseeing the Guide update to ensure the quality and timeliness of the changes.
- ◆ Distributing Guide updates to all Guide recipients.

### 6.3 Types of Changes and Affected Areas of the Guide

The table below represents the type of changes that may occur and affect the content of the Emergency Resources Guide. This table should be referenced when incorporating changes to verify that all potentially affected areas of the Guide are updated.

<b><u>Change</u></b>	<b><u>Part of Guide Affected</u></b>
Change of a business's emergency contact number or Change of a business's emergency contact person	♦ <a href="#">Volume II, Section 5: Directory</a>
Change of business hours or Change in a business's number of employees	♦ <a href="#">Volume II, Section 4: Business Profiles</a>
CIP resident vacates from or relocates within Campbell Industrial Park	♦ <a href="#">Volume II, Section 3: Business Locator Map</a> ♦ <a href="#">Volume II, Section 4: Business Profiles</a> ♦ <a href="#">Volume II, Section 5: Directory</a>
New CIP resident that does not have hazardous materials	♦ <a href="#">Volume II, Section 3: Business Locator Map</a> ♦ <a href="#">Volume II, Section 4: Business Profiles</a> ♦ <a href="#">Volume II, Section 5: Directory</a>
CIP resident that has hazardous materials vacates from or relocates within Campbell Industrial Park	♦ <a href="#">Volume II, Section 3: Business Locator Map</a> ♦ <a href="#">Volume II, Section 4: Business Profiles</a> ♦ <a href="#">Volume II, Section 5: Directory</a> ♦ Information provided separately to the LEPC
CIP resident that has hazardous materials changes chemical inventory or methods of storage	♦ Information provided separately to the LEPC
New CIP resident with quantities of hazardous materials	♦ Information provided separately to the LEPC ♦ <a href="#">Volume II, Section 3: Business Locator Map</a> ♦ <a href="#">Volume II, Section 4: Business Profiles</a> ♦ <a href="#">Volume II, Section 5: Directory</a>

**Change**

Changes to the Emergency Warning System

**Part of Guide Affected**

- ◆ [Section 2: Emergency Planning](#)
- ◆ [Section 3: Emergency Organization](#)
- ◆ [Section 5: Emergency Action Checklists](#)

Additions or changes to CIP roads

- ◆ [Section 2: Emergency Planning](#)
- ◆ All Maps

Modifications or additions of pipelines

- ◆ Information provided separately to the LEPC

Change of emergency shelters

- ◆ [Section 2: Emergency Planning](#)
- ◆ [Volume II, Section 5: Directory](#)

Changes to public and environmental receptors

- ◆ Information provided separately to the LEPC
- ◆ [Volume II, Section 5: Directory](#)

Changes to the EPA Risk Management Program Guidance document/  
Changes to the Clean Air Act Amendment requirements

- ◆ Information provided separately to the LEPC

**6.4 Management of Change**

A record of all changes including the date, a description, and page numbers affected should be maintained by the Guide Coordinator. Revisions and updates will be tracked by use of the Record of Revisions as shown in [Figure 6-4](#).

Pages of the Guide affected by modifications should be dated with revision date so that the latest information will not be confused with superseded information. Rather than redistributing a full copy of the modified Guide to each interested party, only affected pages should be provided to them. A memo providing recipients with instructions (e.g., which pages are superseded) and a brief description of the changes should also be issued along with the modified pages.

All recipients of the Guide are encouraged to keep their plans up-to-date as changes are received. Using an outdated Guide during an emergency may result in confusion for businesses and response agencies.

**6.5 Distribution of Guide Updates**

After the changes are incorporated into the Guide, the Emergency Resources Guide Coordinator shall then mail the modified pages to all Park business occupants, participating agencies and other parties on the distribution list. Refer to [Figure 6-5, the Guide Distribution Record](#), which is used to keep track of the Guide recipients.

**Figure 6-1: Guide Modification Checklist**

**Checklist for Notifying  
the Campbell Local Emergency Action Network**

The following table lists the situations in which you should notify the CLEAN organization. As you probably know, CLEAN is the non-profit organization that was developed to address the critical issues involving public health and safety within the Campbell Industrial Park (CIP). Part of our objective is to create and maintain the Emergency Resources Guide for CIP. In order to do this, we need all businesses within CIP to take an active role. Therefore, we request that you notify CLEAN's Emergency Resources Guide Coordinator by completing the Resident Modification Form when your business undergoes any of the following situations:

- ◆ Begins to use or store quantities of hazardous materials above EPA thresholds.
- ◆ Permanently reduces hazardous materials inventory.
- ◆ Makes significant changes to the storage facilities or containers for hazardous materials.
- ◆ Relocates within the Park.
- ◆ Adds new pipelines or modifies existing pipelines.

If your business vacates from the Campbell Industrial Park, please contact C.L.E.A.N. 's Emergency Resources Guide Coordinator at 682-3128.

If you become aware of a new resident in the Campbell Industrial Park, please help keep our Emergency Resources Guide current by notifying CLEAN.

**Figure 6-2: Resident Modification Form**

## Campbell Industrial Park Resident Modification Form

The Campbell Local Emergency Action Network (CLEAN) is a non-profit organization that has been founded to address the critical issues involving public health and safety within the Campbell Industrial Park (CIP). Part of our objective as the CLEAN organization is to create and maintain the Park's Emergency Resources Guide. To do this, we need your help. Each year, you will be requested to complete the following form so that we can keep the Guide up-to-date. Please complete the following forms (or reflect only the changes). (It would be helpful and more efficient if you would retain a copy of your completed form for next year, at which point, you can then make note of any modifications to the previously submitted information.)

### Section 1: Business Profile

Business Name:
Address:
Contact Name and Title:
Business Phone Number:
Business Fax Number:
Briefly describe your company's services or products: _____ _____
Number of employees on-site:
Normal days of operation: (circle days)   Sun   Mon   Tue   Wed   Thur   Fri   Sat
Normal hours of operation:

### Section 2: Emergency Information

The following information is requested for use during an emergency within the industrial park that may affect your business.

Emergency Contact Name and Title:
Emergency Contact Numbers (telephone, pager, cellular, etc.):

### Section 3: Hazardous Materials Information

Do you use or store any significant quantities of highly flammable or other hazardous materials? <input type="checkbox"/> No <input type="checkbox"/> Yes. If so, please complete the attached form for each hazardous material. ("Significant" refers to quantities of hazardous materials above EPA thresholds.)
---

### Section 4:

Upon completing these forms, please send them to:

CLEAN

Attn: Emergency Resources Guide Coordinator

P.O. Box 700397

Kapolei, HI 96709-0397

**Figure 6-2: Resident Modification Form (continued)****Hazardous Material Form**

This form should be completed for each hazardous material that is located on your company's site. This information will be used to assist businesses and agencies in emergency response. (Make copies of this form as necessary.)

**Section 1: Hazardous Material Site Information**

Hazardous Material Name:	Physical State:
Composition of mixture:	
Maximum quantity on-site:	
Average daily quantity on-site:	
Description and use of material and process:	
Size and number of storage containers or hold-up of material in a process:	
Location of material on-site and distance to the fence line:	
Storage conditions (physical state, temperature and pressure of storage facilities or maximum process conditions):	
Mitigation system (e.g., dike size around storage tank):	

**Section 2: Hazardous Material Transportation Information**

	<u>Receiving</u>	<u>Shipping</u>
Method of Transport		
Total Size of Shipment (e.g., gallons)		
Size of Containers		
Number of Containers		
Temperature & Pressure		
Route		

**Figure 6-3: New Resident Form**

## Campbell Industrial Park New Resident Form

Welcome to the Campbell Industrial Park! We are happy that you have joined us. As a community with a wide variety of industrial facilities, we have developed an organization to address the critical issues involving public health and safety. Our organization, known as the Campbell Local Emergency Action Network (CLEAN), is comprised of residents and businesses in the Ewa Plain as well as representatives from the Honolulu Fire Department, the Oahu Civil Defense Agency, the State Department of Health, and other agencies. We request that you complete the following forms so that we may update the Campbell Industrial Park's (CIP) Emergency Resources Guide.

### Section 1: Business Profile

Business Name:
Address:
Contact Name and Title:
Business Phone Number:
Business Fax Number:
Briefly describe your company's services or products: _____ _____
Number of employees on-site:
Normal days of operation: (circle days) Sun   Mon   Tue   Wed   Thur   Fri   Sat
Normal hours of operation:

### Section 2: Emergency Information

The following information is requested for use during an emergency within the industrial park that may affect your business.

Emergency Contact Name and Title:
Emergency Contact Numbers (telephone, pager, cellular, etc.):

### Section 3: Hazardous Materials Information

Do you use or store any significant quantities of highly flammable or other hazardous materials? <input type="checkbox"/> No <input type="checkbox"/> Yes. If so, please complete the attached form for each hazardous material. ("Significant" refers to quantities of hazardous materials above EPA thresholds.)

## **APPENDIX B**

### **GLOSSARY & ACRONYMS**

<b>Alert</b>	Informs people of impending danger.
<b>American Red Cross (ARC)</b>	The national organization with a congressional mandate to undertake the relief of persons suffering from disaster.
<b>BLEVE</b>	Boiling Liquid Expanding Vapor Explosion
<b>CAA</b>	Clean Air Act
<b>CAAA</b>	Clean Air Act Amendments
<b>Civil Disorder</b>	Terrorist attack, riot, violent protest, demonstrations or illegal assembly.
<b>CLEAN</b>	Campbell Local Emergency Action Network. A non-profit organization that is funded by donations from private businesses whose goals include emergency preparedness, public safety and health, and community education for businesses in the Campbell Industrial Park.
<b>Command Post</b>	Facility where the incident commander, responders, and technical representatives can make response decisions, deploy resources, and handle communications.
<b>Contamination Reduction Corridor</b>	That area within the Contamination Reduction Zone where the actual decontamination is to take place.
<b>Contamination Reduction Zone</b>	That area between the Exclusion Zone and the Support Zone. This zone contains the personnel decontamination station. This zone may require a lesser degree of personnel protections than the Exclusion Zone. This area separates the contaminated area from the clean area and acts as a buffer to reduce contamination of the clean area.
<b>Damage Assessment Teams</b>	The appraisal or determination of the actual effects resulting from an emergency or disaster. This estimate of the damages to a geographic area is made after a disaster has occurred and serves as the basis for the Governor's request for a Presidential Disaster Declaration.

<b>Disaster</b>	<p>Occurrence or imminent threat or widespread or severe damage, injury, or loss of life or property resulting from a natural or man-made cause, including:</p> <ul style="list-style-type: none"><li>a) fire, flood, earthquake, landslide, mudslide, avalanche, wind-driven water, weather conditions, tsunami, volcanic activity, epidemic, air contamination, blight, infestation, explosion, riot, or shortage of food, water, fuel, or clothing;</li><li>b) the release of oil or a hazardous substance; if the release requires prompt action to avert environmental danger or damage; and</li></ul> <p>equipment failure; if the failure is not a predictably frequent or recurring event and it has severe potential consequences.</p>
<b>Disaster Assistance Center</b>	<p>An office in the disaster area where individual disaster victims may receive information concerning available assistance and apply for programs for which they are eligible. It will house representatives of the Federal, State and Local agencies which deal directly with the needs of individual victims.</p>
<b>Emergency Planning and Community Right-to-Know Act (EPCRA)</b>	<p>Title III of the Superfund Amendments and Reauthorization Act of 1986.</p>
<b>Earthquake</b>	<p>Sudden motion of the earth's surface, faulting, and ground failure.</p>
<b>Emergency Alert System (EAS)</b>	<p>Consists of broadcasting radio stations, sirens and interconnecting facilities which have been authorized by the Federal Communications Commission to operate in a controlled manner during emergencies.</p>
<b>Emergency Operations Center (EOC)</b>	<p>Facilities designated for use by State and Local governments to direct and manage emergency disaster operations.</p>
<b>EMS</b>	<p>Emergency Medical Services</p>

<b>Enemy Attack</b>	Hostile action taken against the U.S. by foreign forces resulting in the destruction of military and/or civilian targets.
<b>Energy Shortage</b>	Shortage or interruptions of vehicle fuel, heating oil, natural gas, or disruption of electrical power.
<b>Environmental Protection Agency (EPA)</b>	The federal agency responsible for regulating air, water, hazardous waste, pesticides, and toxic substances.
<b>ERPG</b>	Emergency Response Planning Guideline. The ERPG system includes ERPG-1, ERPG-2 and ERPG-3 levels.
<b>Evacuation</b>	The removal of potentially endangered, but not yet exposed, persons from an area threatened by a hazard.
<b>Exclusion Zone</b>	That area immediately around a hazardous materials spill. That area where contamination does or could occur. The innermost of the three zones of a HazMat site. Special protection is required for all personnel while in this zone.
<b>Extremely Hazardous Substance (EHS)</b>	In the text of SARA, Title III, any substance contained within the list of substances published by the Administrator of the U.S. Environmental Protection Agency. Otherwise known as the 302 Extremely Hazardous Substance List.
<b>Facility Emergency Coordinator (FEC)</b>	Company employee responsible for coordinating the on-scene responsible party response to a hazardous materials incident, usually for a Title III 302 facility with an EHS in a quantity exceeding its threshold planning quantity. The FEC will usually be an employee of the company causing the spill or the designated contractor of the spiller.
<b>Federal Coordinating Officer</b>	The person appointed by the President to coordinate federal assistance in an emergency or disaster.

<b>Federal Emergency Management Agency (FEMA)</b>	The agency established to oversee federal assistance to local government in the event of major disasters. Also administers the Emergency Management Assistance Program, which provides emergency management funds to local governments through the states.
<b>Field Command Post</b>	See Command Post.
<b>Fire</b>	Wildland - any instance of uncontrolled burning in grasslands, brush, or woodlands.  Urban - Uncontrolled burning in residential, commercial, industrial, or other properties in developed areas.
<b>Flood</b>	Flash - Quickly rising small streams after heavy rain or rapid snow melt.  Urban - Overflow of storm sewer system usually due to poor drainage following heavy rain or rapid snowmelt.  Tidal Storm - Surge and wave run-up higher than normal tidal range and higher inshore wave run-up due to storm effects in coastal areas.
<b>Hazard</b>	Any situation or condition that has the potential of causing injury to people or damage to property.
<b>Hazardous Material (HazMat)</b>	Any material which is explosive, flammable, poisonous, corrosive, reactive, radioactive, or a combination, and requires special care in handling because of the hazards it poses to public health, safety, and/or the environment.
<b>Hazardous Materials Incident</b>	Uncontrolled, unlicensed release of hazardous materials during storage or use from a fixed facility or during transport outside a fixed facility that may impact the public health, safety, and/or environment.
<b>HAZWOPER</b>	Federal safety and health standards promulgated for hazardous waste operators and emergency response personnel by the Occupational Safety and Health Administration as authorized in SARA, Title 1. Otherwise known as 29 CFR 1910.120 final rule.

<b>HFD</b>	Honolulu Fire Department
<b>HIOSH</b>	Hawaii Occupational Safety and Health
<b>HSERC</b>	Hawaii State Emergency Response Commission
<b>IDLH</b>	Immediately Dangerous to Life and Health level
<b>Incident</b>	An occurrence or event, either human caused or natural phenomena, that requires action by emergency services personnel to prevent or minimize loss of life or damage to property and/or natural resources.
<b>Incident Commander</b>	The individual responsible for the management of all incident operations.
<b>ICP</b>	Incident Command Post
<b>Incident Command System (ICS)</b>	System which provides effective incident management through the combination of facilities, equipment, personnel, procedures, and communications operating within a common organizational structure to effectively accomplish stated objectives pertaining to an incident.
<b>LEPC</b>	Local Emergency Planning Committee. A committee appointed by the State Emergency Response Commission (as required by SARA Title III) responsible for the development of the City's hazardous materials response plan.
<b>LFL</b>	Lower Flammability Limit
<b>MSDS</b>	Material Safety Data Sheet. Written or printed material outlining the chemical properties and known health hazards for chemical products. The content of an MSDS is as outlined in 29 CFR Part 1200 (g).
<b>MSRC</b>	Marine Spill Response Corporation
<b>NAERG</b>	North American Emergency Response Guide

<b>Nation Warning System (NAWAS)</b>	The Federal portion of the Civil Defense Warning System used for the dissemination of warning and other emergency information from Federal and State to the local warning point. It is a dedicated, nationwide, party-line telephone system operated on a 24-hour basis.
<b>National Interagency Incident Management System (NIMS)</b>	<p>A common system consisting of five major sub-systems that collectively provide a total systems approach to all risk incident management. The sub-systems are:</p> <ul style="list-style-type: none"><li>a) The Incident Command System</li><li>b) Standardized training</li><li>c) Qualifications and certification system</li><li>d) Publications management</li></ul> <p>Supporting technologies</p>
<b>National Oceanic and Atmospheric Administration (NOAA)</b>	A branch of the U.S. Department of Commerce whose scientists continuously monitor and predict weather conditions.
<b>National Response Team (NRT)</b>	The national body responsible for coordinating Federal planning, preparedness, and response actions related to oil discharges and hazardous substance releases.
<b>NIOSH</b>	National Institute of Occupational Safety and Health
<b>NRC</b>	National Response Center
<b>NWS</b>	National Weather Service
<b>Occupational Safety and Health Administration (OSHA)</b>	Part of the U.S. Department of Labor. OSHA develops and enforces federal standards for occupational safety and health.
<b>OCDA</b>	Oahu Civil Defense Agency. Responsible for directing and coordinating all notification, public information, warning, evacuation, sheltering, and initial recovery operations.
<b>psi</b>	Pressure measurement in terms of 1 pound per square inch.

<b>Public Information Officer</b>	A member of the command staff who is responsible for the formulation and release of information about the incident to the news media and other appropriate agencies and organizations.
<b>RCRA</b>	Resource Conservation and Recovery Act of 1976
<b>RMP</b>	Risk Management Program
<b>Safe Refuge Area</b>	An area within the contamination reduction zone for the assemblage of individuals who are witnesses to the hazardous materials incident or who were on-site at the time of the spill. This assemblage provides for the separation of contaminated persons from non-contaminated persons.
<b>Strike Team</b>	Specified combinations of the same kind and type of resource with common communications and a leader.
<b>Superfund Amendments and Reauthorization Act of 1986 (SARA)</b>	Title I deals with health and safety issues for hazardous waste workers and emergency response personnel. Title III deals with emergency planning and community right-to-know provisions. Also known as the Emergency Planning Community Right-to-Know Act (EPCRA). Title III establishes City, State, Federal and private sector responsibilities for planning and responding to hazardous material incidents; reporting requirements for facilities handling, storing, manufacturing, or transporting hazardous chemicals; and guidelines for informing the public of hazardous materials present in the community.
<b>Support Zone</b>	The clean area outside of the contamination control line. Equipment and personnel are not expected to become contaminated in this area. This is the area where resources are assembled to support the hazardous materials operations.
<b>Task Force</b>	A group of resources with common communications and a leader, temporarily assembled for a specific mission.

<b>Title III</b>	The Emergency Planning and Community Right-to-Know Act of 1986 which specifies requirements for organizing the planning and community right-to-know process at the State and Local levels.
<b>Transportation Accident</b>	An accident involving passenger air, highway, rail, and marine travel resulting in death, injury and/or contamination.
<b>Tsunami</b>	A series of traveling ocean waves of great length usually generated by submarine geophysical displacement. It may or may not be preceded by an earthquake.
<b>Unified Command</b>	A command structure which provides for all agencies who have jurisdictional responsibility for the incident, either geographical or functional, to jointly manage an incident through a common set of incident objectives, strategy, and priorities.
<b>Warning</b>	Notifies people of the imminent impact of a specific hazard and protective actions which should be taken.

## **SECTION 1**

### **INTRODUCTION**

# 1. Introduction

---

## 1.1 Background

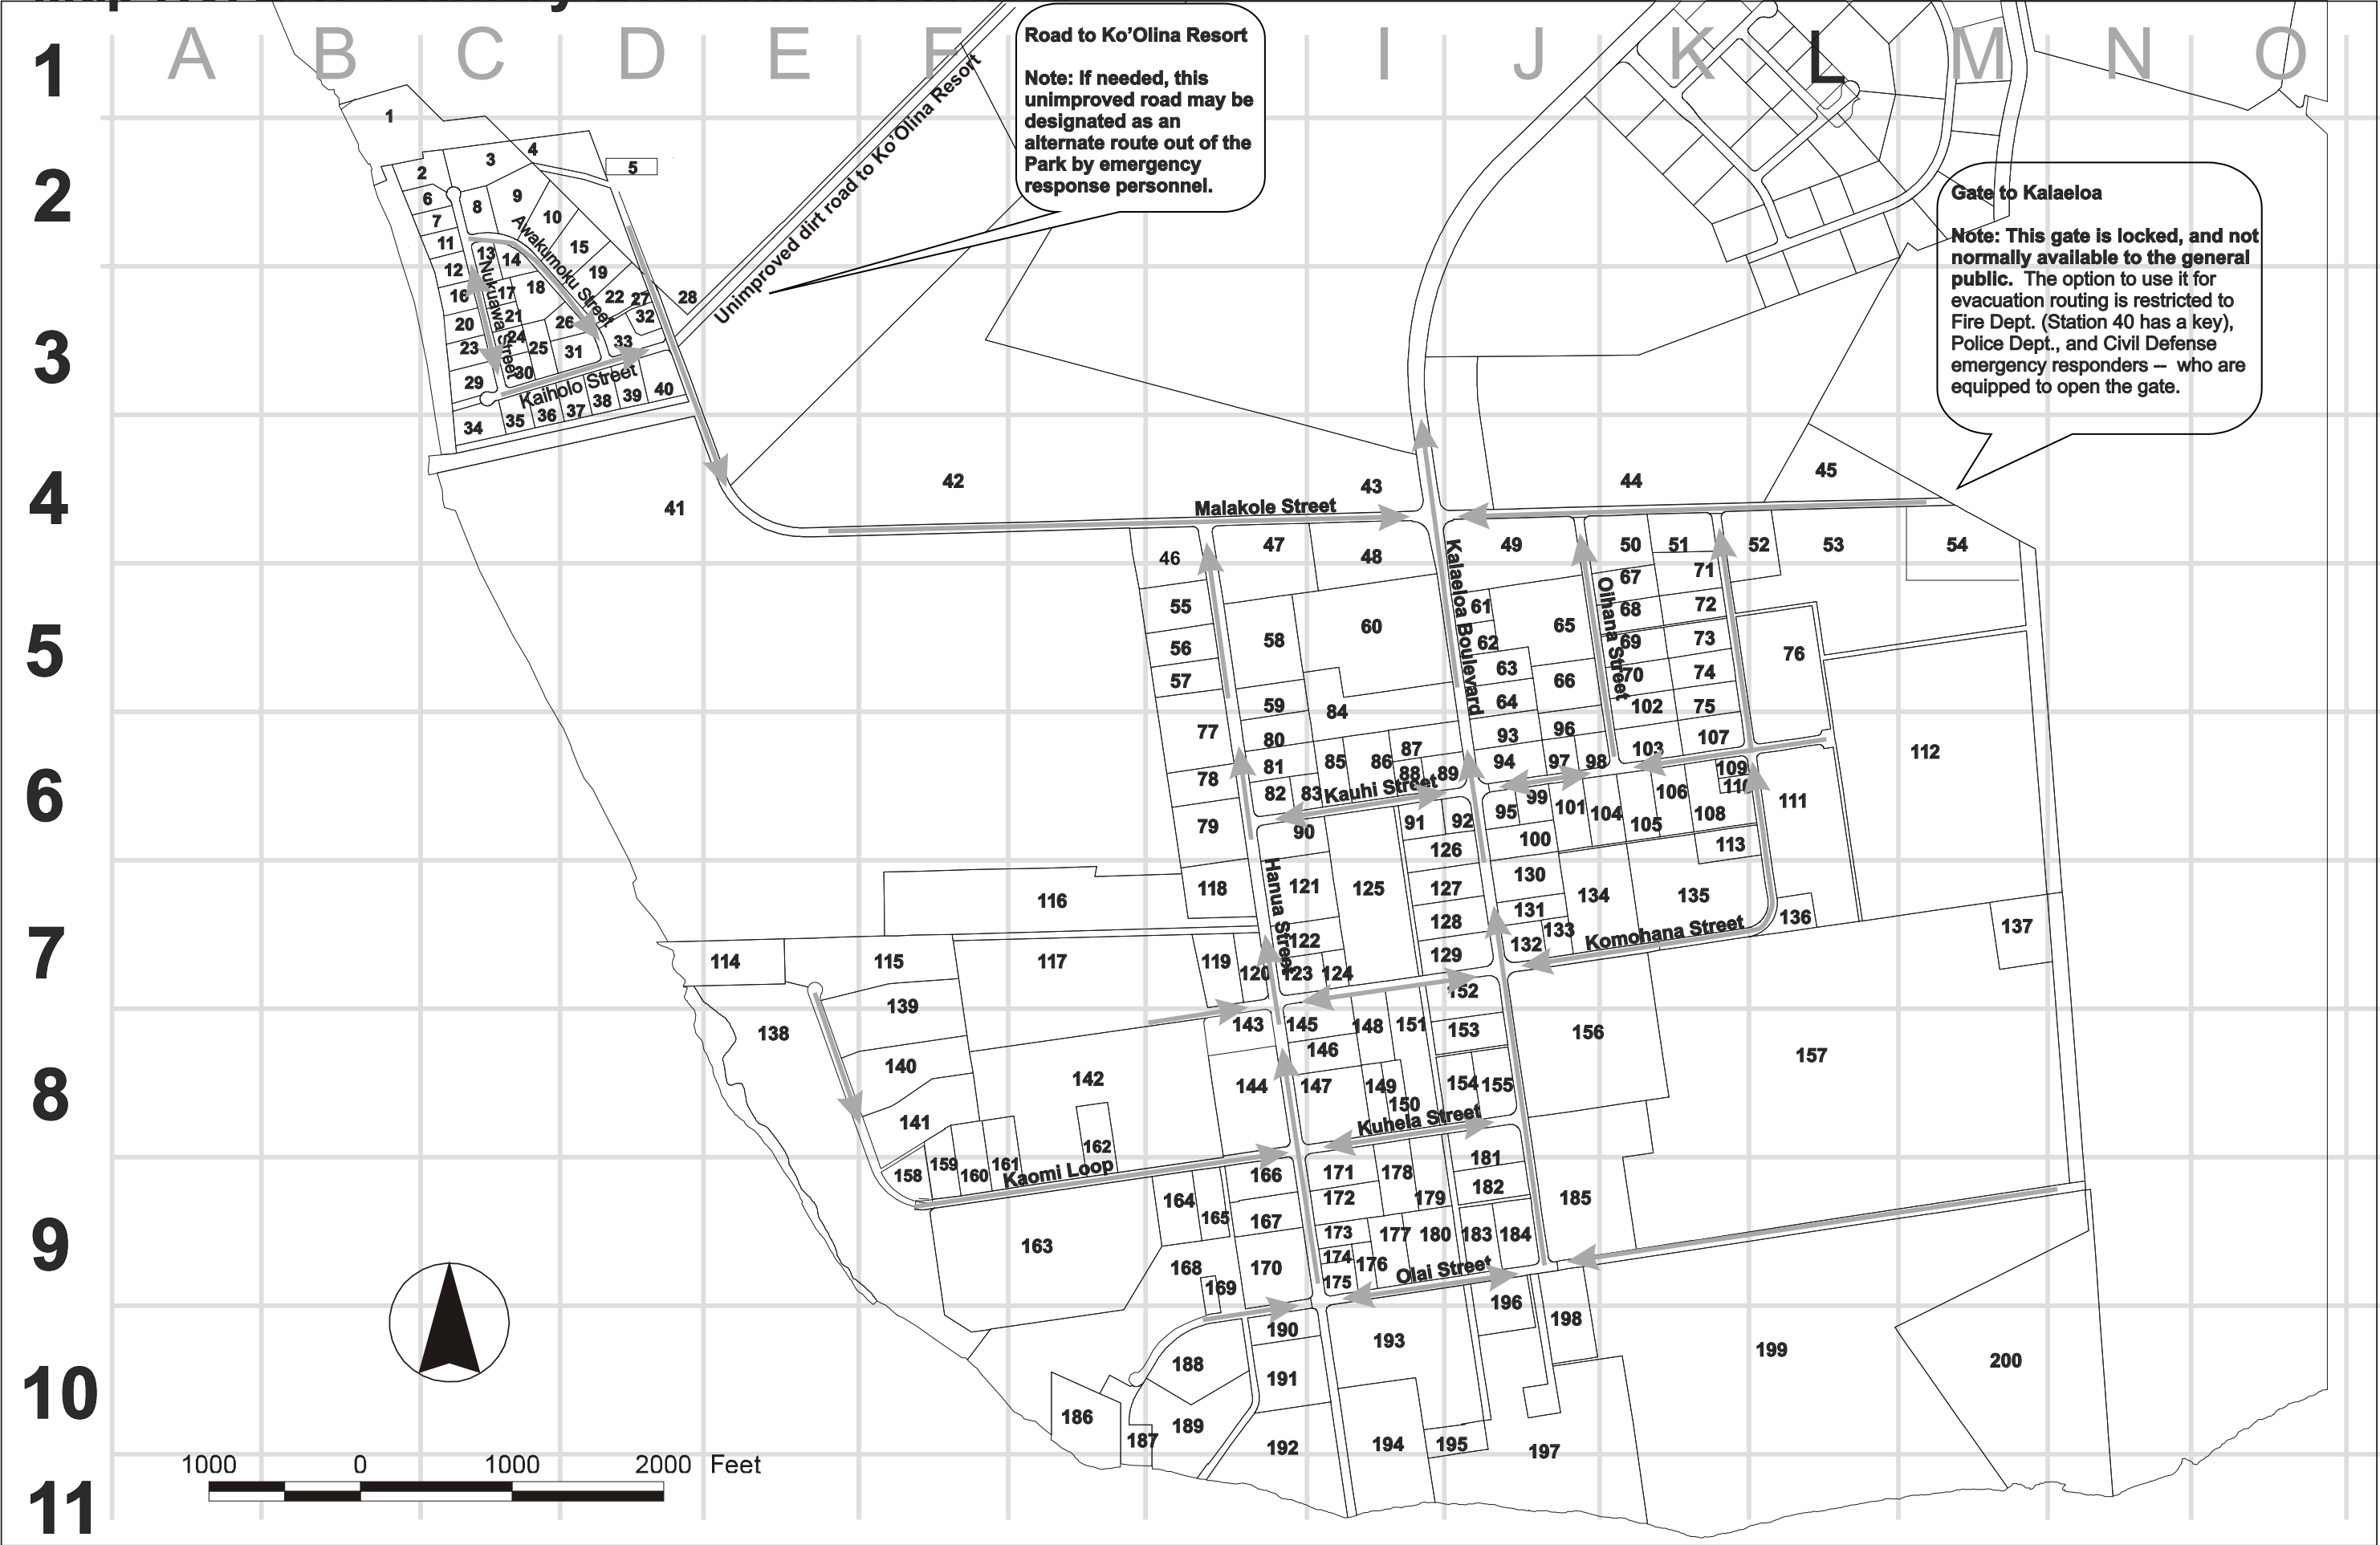

This Emergency Reference Directory is provided as supplemental information to the emergency planning information in the Campbell Local Emergency Action Network's Emergency Planning Guidebook and Action Checklists. In addition to an extensive listing of names, telephone numbers, government agencies and resource providers, the directory contains a locator map and a brief profile of each business that has been identified in Campbell Industrial Park (CIP).

This Emergency Reference Directory is intended to assist businesses within CIP identify their neighbors and provide useful information for the creation of the business' own emergency response plans. Every effort has been made to develop a current and accurate listing of Park residents and other useful information. Personnel names, business locations and other emergency information are constantly changing within CIP and in the community. Businesses are encouraged to double check critical contact names and telephone numbers in their own emergency response plans to verify the information provided.

## **SECTION 2**

### **EVACUATION MAPS**

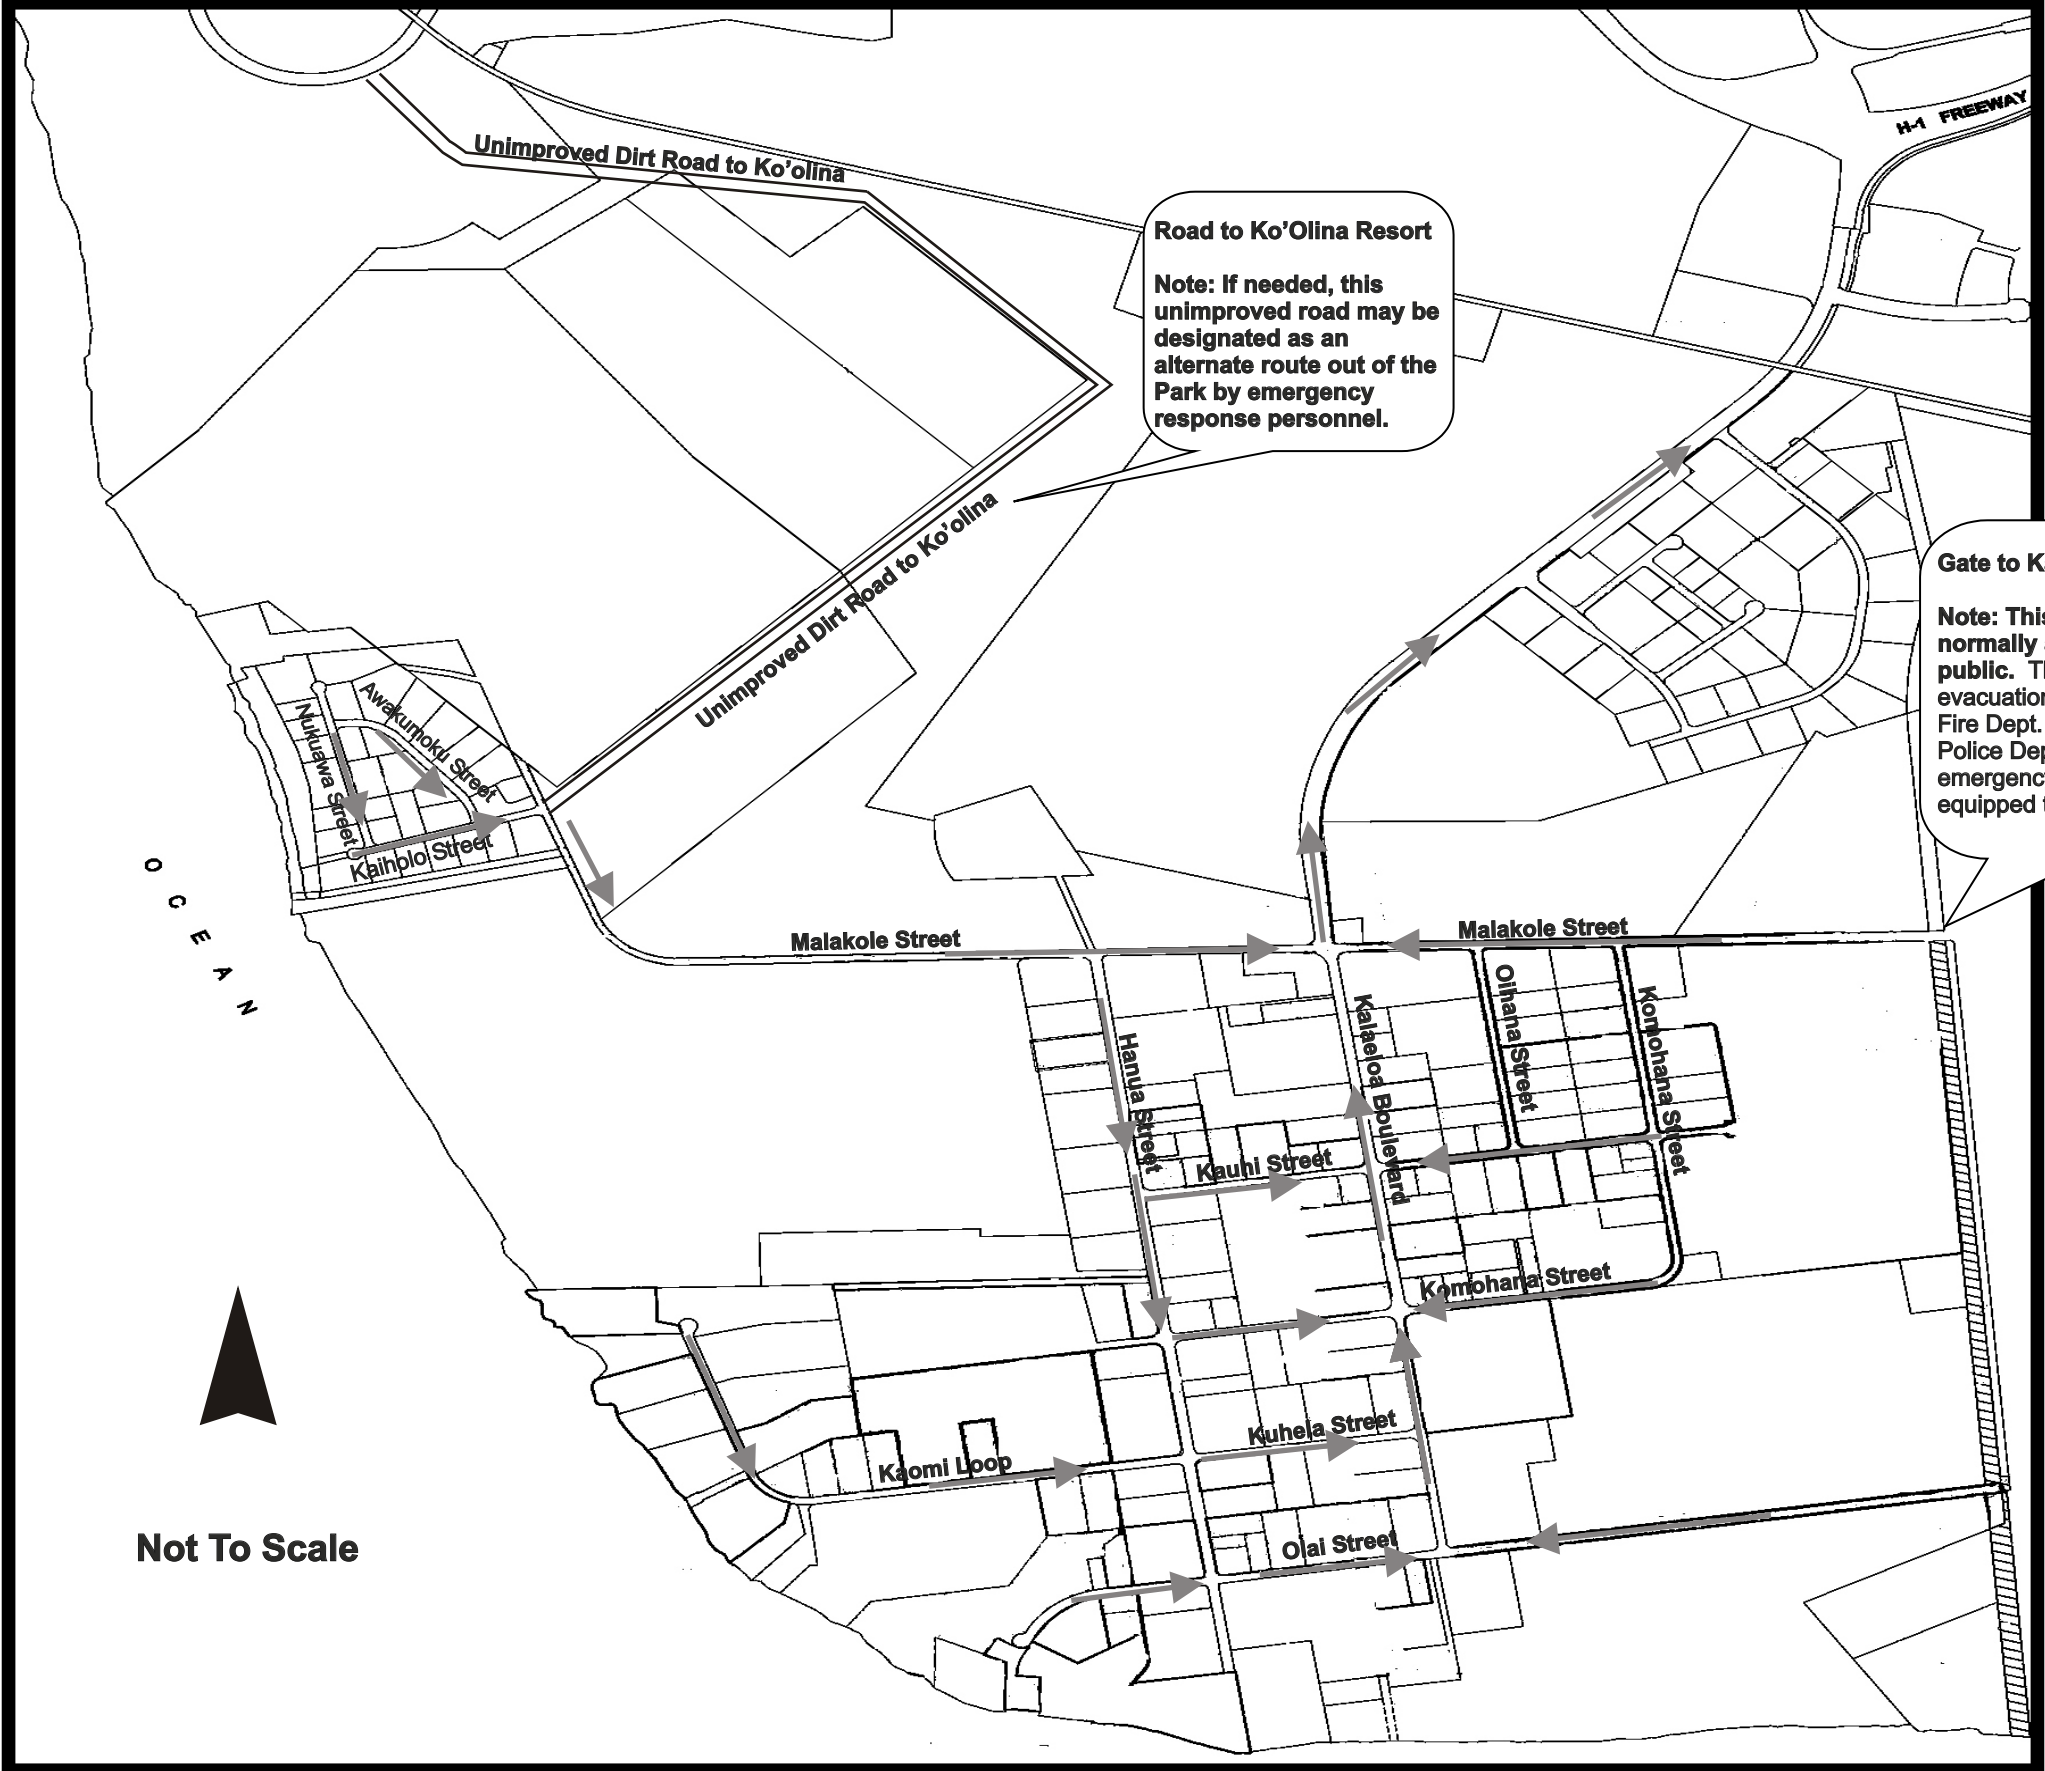

Map No. 2-1: Primary Evacuation Routes

Map No. 2-2: Draft Pre Event Evacuation Routes

This map depicts evacuation routes that may be designated by the Honolulu Police Department for an evacuation if deemed warranted by the response agencies. The routes designated are intended to relieve traffic congestion at Malakole Street and Kalaeloa Boulevard. See Sections 4 and 5 of the CLEAN Resources Guide Volume 1 for more information on response to emergencies.

# **SECTION 3**

## **BUSINESS LOCATOR MAP**

**Instructions on Using the Business Locator Map**

The Map Key provided on the following pages lists, in sequential order, the plot number and map grid location for each associated business resident within the Campbell Industrial Park. In some cases, a plot number may reference more than one resident. ([Section 4, Business Profiles](#), is an alphabetical listing of all Campbell Industrial Park business residents and their plot number and map grid location.) The plot numbers refer to the numbered land parcels on [Map 3-1](#). The map grid location number can be used to help locate the plot number on the map.
